From all I've read and heard, the reason for all these California crises
(remember the electric energy emrgency?) comes from a fundamental failure of
the system and the voters there to connect rights with responsibilities. IOW,
services are not connected to taxes.

They vote in all sorts of mandates but not the taxes to fund them.

Mike, I see it the other way. In any case, everyone posting here has
been tainted by the stench of a rotting horse. But we continue to
beat it anyway.

> About the only thing we could do is to ask someone like Carl to tell us
> what to do.

If you must.

> What I would say is to keep the code test in the future, and to
> maintain a high level of proficiency in the writtens. That is what I

> going to mean a thing.

Why not?

> What the NCTA's appear to want is an open acceptance of what they have
> brought to bear on the Amateur community. Sorry, ain't going to happen.
> I'll welcome and encourage new hams, but I won't change my mind about
> how I think the ARS should be structured.

You know, some people think that the NCTA have been ineffective at
changing anything. They think the FCC was going that way anyhow.

So I'll chalk you up as one who thinks NCI is a highly effective
organization. Yep, better ask Carl how you should respond to and
NOI/NPRM.

> Personally, I think the NCTA's haven't quite figured out that THEY have
> become the mainstream in Amateur radio. YOU WON! NOw you have to start
> running the show.

Kewl!

> People who agitate for change very often have a hard time adjusting to
> their new position after achieving it, so don't feel too bad.

Kind of like the Republican Party after 70 years of Democrat rule.

FWIW, they're doing just fine. So will we.

> This whole concept is why I chastise Carl and Bill for not being more
> prepared to ease the transition after their victory. The PCTA's, such as
> Larry, Dick, Dave, Jim, Dan, and myself and others, are a diverse group.

Steve, Larry, Dick, Kelly, Dave, Dan, Bruce, Dan Finn, and a heap of
others who have fallen on their swords are certainly diverse.

Jim seems to be friendly enough, considering the hell he's been
through over the years.

> We have in common the belief that the code test is a good thing for

Except for the CB part, thank you. CB is regulated by Part 95, not
Carl.

I'm ready to start singing like Sidney Portier, "He's Got the Whole
World in His Hands."

Mike, don't sweat it. The ARS is in good hands.

So its much more important to keep out some or a lot of ordinary law
abiding citizens who otherwise could be enjoying the ARS?

You never did get it, did you?

I said it before the last restructuring and I guess its necessary that
I say it again, "What I fear most about restructuring the ARS is a
lack of enforcement, and what I fear most about maintaining the Status
Quo is a lack of enforcement. The Morse Exam is no substitute for
enforcement."

Yep, just as they came to VHF/UHF ham radio from the never-never
land of 27 mhz via a no-code (and virtualy no-test) ham radio license.
Seems like the FCC just doesn't care, or they'd never allow it.

The Oregon State Police does not have the "man power or personal"
(sic) to police the 200,000 or more drivers who have the ability to
access I-5 northbound in the southbound lane. Drivers, jump into
your cars and DRIVE.....

What a jerk.

Not me. Not at all
. You know as well as anyone, better than most, that almost the only
"enforcement" we've had on the ARS for many years
prior to Riley's appointment WAS the code test.

Now, a 'difficult' (for that type of individual) test which discourages,
yea, FILTERS him from active, open participation is a poor
excuse for monitor vans and well trained and equipped crews.
But it's what we had.

Now we have Riley and a 5wpm code test. Soon only Riley. When he goes, I
for one believe the ARS will follow his exit, not far behind. By that time
there
will be far more than adequate evidence that the ARS is no longer a viable
self-
policing entity, staffed with conscientious people willing and able to
conduct
themselves in a manner commensurate with the priveleges granted,
most of which will shortly be summarily withdrawn.

I just don't believe the public OR the government would tolerate CB on the

same level as ham radio has long existed. And that's exactly where it's
headed,
and has been for too many years.

We just can't wait for a few thousand like him- it wouldn't take all that many, you know, to really cause some super problems- to show up on HF running
full power.....

You really missed it, didn't you??

Instant upgrade of license isn't the only gratification involved.

Dick, these thoughts have been buzzing around the drafty recesses of my
head:

"I don't have time to learn Morse code....."

"I'm never going to use Morse code, I'm not going to learn it....."

"I think band plans are stupid, it's an obsolete idea for an obsolete
mode. They really aren't law anyhow...."

"There are a lot more people running SSB, why shouldn't they have the bandwidth....."

"I don't feel like self policing, that's just interfereing with my RIGHTS. Besides, there isn't enough enforcement personnel to catch me....."

At that point it is a dire situation indeed!

And it's already all been heard in this group.

- Mike KB3EIA -

Others have pointed out that rule 301(e) was written that way to avoid creating any new 'Tech+' licencees, but it looks as if invoking the international rules created a sunset clause, whether intentionally or otherwise.

I don't really see how that throws anything into chaos. Right now no-coders who operate on the Novice/Tech HF allocations can't readily be detected for lack of any central records to prove that they are actually no-coders. If the changes to s25.5 affect 97.301(e) so as to make it permissible, then from the FCC perspective it makes an enforcement problem go away!

Dick:

Perhaps. I could be wrong about all this, but I don't have that kind of luck!
And if ham radio does end up "brain dead," how long do you think the
inert, comatose corpse will be kept breathing before someone trips over
the respirator's power cord?

YOU never did get it. No one has any intent to keep anyone out who wants to
follow the rules and refrain from becoming a problem. You never could see that
a code test never kept otu anyone who wanted in,. just a few who were too mildly interested
to
bother. Like you.

> enforcement."

That's all you know about it. For years the code test was the ONLY factor that restricted
troublemakers from freely roaming the ham bands, FCC having been relegated by lack of
funding
to more or less toothless-watchdog status.
Of course that doesn't nean a thing to you, but what that shows id your lack of
perception.

So when a few thousand refugees from way up there descend onto the HF bands
-as some have very recently indicated their intent right here on rrap- and lonely Riley is
left
to sweep up,. just how much enforcement you think there'll be?
But press on- it's "kill the code" even if it kills us.

Yep, As I was aware of that. And I never expected them to change for me at the last minute. BUT, I do believe that with enough warning ahead of time it should be considered more than fair for a VE team to make an adjustment. It should be no problem for a VEC to be able to send via code practice oscillator!!!!!! Wouldn't that be a shame if the VEC's have become so lazy they can't even send a code test via a key because they are relying on the code CD's and tapes.

Where the hell did you think I expected to walk into a test session in the past, and at the last possible moment expect a major change?

I think I have noticed something, I think, tell me what you think.
I am a 'tech', and glad to have 'this' ticket, and have worked 'on the
code' off and on. But my point is, I use/listen on two meters and 440
locally. In the last several years, I 'hear' pagers of all kinds in
the ham bands. Keep that thought in mind. Also a few years back I
recall reading about different ""Companies '" wanting/trying to use
the 440/two meter band for sat freq, and business in general. I know
I don't have that 'info' detailed and with footnotes, but I am sure
you recall what I am talking about. There is JUST so much spectrum,
and lot of
business looking to use it. All (90%) of the hams I know are pretty
old, you go to a ham fest , convention, and there are very few young
people. I have had the ''''idea'''' that if ham radio is left to it
own wishes, what is the likely hood that some "Service" will eat the
old, dying , and the dead. I don't advocate the 'ham bands' turning
into 11 meters, but I don't "think" we should refuse to see the
"writhing on the wall',,,, I would just hate to see something like,,,,
ten years from now , almost everyone in the US, walking around with a
cell phone in there pocket, all using the """Ham bands"". Just my 2
cents......What do you "think"? cl 73

Please, don't waste my time with silly questions like that, Mike. Every ham knows, or should know, that the goals of Amateur Radio are specified in 97.1 of the Code of Federal Regulations. The needs are that necessary to meet those goals.

Mike, since I'm not an advocate, I'm not in the NCTA camp. You seem to think anyone who disagrees with you is. Instead, I've simply acknowledged, during a discussion with you about the written tests, that code testing no longer offers any real benefit to ham radio. An acknowledgement of reality doesn't necessarily advocate anything.

In my opinion, the code testing issue is pretty much dead in this country. It's only a matter of time before code testing goes away. So, instead, I was responding to your comments about the written tests, with code testing, first mentioned by you, on the peripheral of that discussion.

> code test?

In the past, you were not excluded (code testing served a need). However, if code testing remains solely as a means to exclude "those people," others in the future will be. "Those people" include anyone you set out to exclude.

You want stiffer written tests (or code testing) to exclude "dumbed down" people. I don't agree with that. Show me something that individual has done wrong and I'll support your efforts to get rid of that person. However, I'm not willing to exclude groups of people simply because some don't like them or a few in that group have done things some don't like.

Many don't like CB'ers and want stiffer written exams (or code testing) to keep "those people" out. I don't agree with that. Again, if you want to throw someone out because that person has broken the rules, I'm all for that. However, I'm not willing to exclude someone from even getting into ham radio simply because they once owned a CB radio and we don't like what some did with those radios.

Yet, you and Dick are the only two in this thread who have even suggested anything like that. Not a single person opposed to code testing has made any such comments in this thread. And I certainly haven't made any comments about reducing or eliminating the written tests.

Most people are realistic. I support keeping the written tests because those tests serve a purpose which benefits me and the entire ham radio community. Code testing, which a few of you can't seem to get past, doesn't today.

My comments about "keeping people out," or excluding people, only had to do with test requirements designed to exclude instead of serving a need for ham radio. Code testing once served a need, so did not exclude at that time. If it remains today solely as a barrier to keep others out, it does exclude. Brian's idea of stiffer written exams don't exclude if it serves a purpose or need. However, if done solely to keep others out, it also does exclude.

Again, once we start down the path of excluding others, when does it stop and who else do we exclude? Am I next in the list? Are you?

Actually, it's both. The "liberals" vote in the mandates. The "conservatives" block the taxes. Both sides disconnect rights from responsibilities. You get the worst of both worlds.

Look at their electric "deregulation" of a few years back. The retail prices were regulated (classic big government utility/monopoly idea) but the wholesale prices weren't (classic laissez-faire trickle-down supply-side free-market-capitalism).

Coupled with that was the desire for high tech jobs and investment (Silicon Valley) but not the responsibility to build the infrastructure to run it (power lines, generating stations).

End result: Lotta people's lights went out.

Dick, coded people can be idiots, too. Have you heard Kelly challenge
other to "Meet me on HF, any band, any mode, any time..."

Was that so he could sweet talk them?

Excellent point, Dwight. It is only recently that I have heard more and
more alignment with the philosophy [paraphrasing] that it's OK to filter out
bad people from the ARS by having CW as an element for testing. If it is
believed that taking that element away will "dumb down" the ARS; then it is
logical to make the assumption that many support CW as a filtering tool for
the ARS--which is disgusting.

It has become popular now, to label others as "those people." In ham radio,
in everyday life. If CW is serving as a "filtering tool" in the eyes of a
majority in ham radio--I say abolish it. But, I've a feeling the attitude
that it is a filtering tool is not prevalent. Thank goodness!!

I remember a long time ago in this newsgroup, accusing some of using the CW test as a filtering tool. I was nearly lambasted to Timbuktu. Now, it's popular and OK to just make the declaration!

If CW is used as a "filter" to keep anyone of the ARS; then it's plain wrong.

First off, I don't think I've ever said "dumbed down". If you know I
have, post the reference.

Now to the subject at hand.

I do not consider the Morse Code to be *any test of intelligence or
desirability whatsoever.

What I do consider it is a method of ensuring that the person actually
wants to be in the service. It is a measure of inclusivity, not
exclusivity. Kind of like learning to parallel park or do a three point
turn.

You"re way off base with me Dwight. I own a CB radio - use it for
traveling. It's saved my tookus on a few occasions. I even had a
license, (my parents did to be precise, many years ago) KBM-8780.

We can be whatever we want to be. There is no argument that no license
testing is at all necessary at all in order to put up a station and
start transmitting as soon as the Morse code requirement is gone.

So we choose. We do already have indications of what the spectrum of behaviors are. Right now, those who favor less knowledge have the upper hand.

It's another strawman, Mike. Most hams in my town had CB licenses 30 years ago and thought we'd enjoy conversing with others who weren't hams, and probably some of them would wind up getting into ham radio. A few did, and one couple a man and wife even worked up to Extra -tested at the Chicage FCC office.

But it wasn't long until the vulgarity from truckers passing through ruined it for most everyone who didn't join them. Then came the Freebanders, another story entirely. CB as a common communications mode faded pretty fast.

I was there to observe the beginning of the nonsense on 27 mnhz, if fact my tenure as a ham goes back to the time when the CB band was a very-little-used ham band. I knew no ham who lamented it being converted to a medium for the people. Sure was a shame the FCC had to place it on a frequency so subject to abuse. A' local' CB band would never have turned into such a trash pit. The anonymity offered by "shooting skip" wouldn't have been available on local-only transmissions and that culture would never have developed.
And the rules said it was to be used locally only. But we soon saw how well a significant percentage of those who have nothing to lose obey the rules, didn't we? Why should anyone believe they change when they get a ham license when it's being made so easy? I'll say it again-the only thing preventing wholsale change in ham radio toward the exact same thing that happened to CB is the code test. When that's gone, ham radio is on a steeper part of the slippery slope.

BTW I held CB callsign KIQ8934, c. 1970.

It is simple crystal ball gazing, Dwight. I just look at a situation, and work it out into the future. There are many people with many views, people like you who support testing as it is now, and people who support lessening the tests. BTW, I believe it was Bill Sohl who proposed that sort of thing (yes, I know - not as an official NCI position). At any rate, people being what they are, and now encouraged by the recent changes, those who want less or no testing will feel encouraged to speak up and see if they can get their wishes granted.

Nothing stays in one place. Liberals tend to get more liberal, and conservatives get more conservative as they have success, until they start getting out of touch with the mainstream. Some of you are just not looking past the ends of your noses. The inability of people to set still on something means that there will be calls to further "simplify" or "make more inclusive" the requirements to be a Ham. Those of us who think it should mean something will just be considered cranks.

As you no doubt consider us cranks, eh?

> Most people are realistic.

Very true. Who among us, no matter what their opinion, doesn't think they are being realistic? 8^)

> If it remains today solely as a barrier to keep others out, it does exclude.

As does any test whatsoever! Testing in any form is a matter of your definition exclusion, With even as hard a time as I had learning Morse code, it is not harder than the rest of the testing regimen.

> Brian's idea of stiffer written exams don't exclude if it serves a purpose
> or need. However, if done solely to keep others out, it also does exclude.

How many CB'ers (who are not Hams already) have been tested for access to their band? Many are running serious power, and they can put up antennas and put rigs together. And operate just fine.

There is just no NEED for any testing whatsoever in order to do the physical act of getting on the air. No need at all!

Unless of course, you would like to have the ARS mean a bit more than Citizen's band radio.

We have to as hams decide just how adroit we want the new ham to be. As the new lords of the hood, you NCTA's have to make sure of that.

> Again, once we start down the path of excluding others, when does it stop
> and who else do we exclude? Am I next in the list? Are you?

I wasn't going to say this, but I'm weary of the "exclusive" sthick going on. I know a young lady who is a General class ham. She works mostly CW. She's a pretty darn good Operator too. I'm not going to give out her name or callsign to protect her privacy

She is also a person who attended special education classes for her education. A dear woman, but not as smart as the average person.

And yet, somehow, some way, she learned Morse code, studied for and passed the General test, and is now on the air as an active ham.

When I see the whining about exclusivity, and all the other complaining about how unfair the Morse code test, I often think of her.

Then I think of the complainers and compare them, who think it is just too hard, and her, she who took the trouble to learn, even though she has not been blessed with the same gifts as most of us. She's a brother/sister ham, and I'm happy and proud to INCLUDE her in the service.

Wanna guess who I respect more?

I dunno, Jim, that's the most heavily taxed place I've been, in every category. They just
can't
seem to understand that all the desirable public programs come at a high cost. Somebody
gotta
pay for it all. They just can't afford all they've voted themselves.

The old NIMBY sindrome at work. Everyone wants a cellphone but no one wants the tower in
their
neighborhood.

Everybody wants hams to be available for emergency comms when the ship hits sht sand. But
no

one wants that ugly ham radio tower in the neighborhood, not even an outside antenna in the new
subdivision.

To his credit The Terminator woke up and 'terminated' himself from that
nasty scenario. I imagine he took a close look and realized it was Mission Impossible. Actually
he probably could have done better than most of the
politocos have. Like Ronald Reagen. He had no big load of baggage
in the form of longterm obligations to carry to the job, and called it like he saw it.

48. ARRL on real world BPL tests - devastating effect on the HF bands

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-01 15:03:48 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0308010703.a9d23b0@posting.google.com>
Source record: 73461

From;
http://www.arrl.org/news/stories/2003/07/30/4/?nc=1

Extract below;

In the meantime, ARRL Lab Manager Ed Hare, W1RFI, is continuing his efforts to assess and quantify the effects of BPL on HF amateur allocations. Just back from a more than 1300-mile trip to evaluate the effects of BPL systems now in the testing stages, Hare described the interference he monitored on the HF bands as "devastating." ARRL President Jim Haynie, W5JBP, and members of the ARRL Technical Relations Office staff have been working to build the Amateur Radio case against BPL in Washington.

"The threat is real," Hobart said, "and the work it will take to defeat this potential threat will be significant." She said the ARRL is counting on every ham--whether or not an ARRL member--to support the League's efforts to represent Amateur Radio in this fight.

In a recent solicitation focusing on the BPL issue, ARRL CEO David Sumner, K1ZZ, said no threat prior to BPL has posed a challenge more serious than the one amateurs face today. "The threat is as close as the power lines right in your neighborhood," Sumner said in issuing a call to action to all amateurs. "Only by joining forces financially will we be able to educate government officials quickly and effectively on the impact of this new threat to Amateur Radio spectrum."

Sumner notes that BPL technology already has been deployed in some European countries, and amateurs there have experienced interference from the systems. Responding in part to concerns expressed by its amateur community, Japan last year decided not to adopt the technology because of its interference potential.

Amen, don't even think about one of those turkeys. One advantage I/we
had back then was a profusion of quite inexpensive but usable HF rcvrs
which are not available today. Mostly military surplus gear and some
commercial cheapies like the Hallicrafters S-38. In this respect maybe
we had it much easier than the newbies today have.

Too much work. Plus once VHF comes into play CW becomes a no-interest
thing. We've had sporadic attempts around here to get 2M code practice
sessions going but they didn't last very long.

Misguided though he undoubtedly is, I notice that Ignatio is from
Italy. Thus if he has a bandplan to enforce, maybe it is an Italian
invention? It is also not entirely true that the licencing authority
in the UK recognises no band plan since BR68 list band plans - perhaps
you have never read BR68?

The use of some bands is done by gentlemens agreement but perhaps you
would exclude yourself from any conventional definition of a
gentleman?

Sorry you feel that way. We owe our ham radio to the ARRL -
they're all we have, all we ever have had, or will have.
Do you think the local CB club is going to look out for our
interests?

The ARRL has to cater to a lot of concerns, whether your operation
is with PSK31 or CW and link coupling.

A little OT, but I worry because we're losing the young interests
to the internet. If you're old enough to recall hearing the novice
bands come alive after 3PM when school let out, you'll know what I mean.

>to more or less toothless-watchdog status.

Only problem I have with that statement is the FACT (stated by Riley himself as quoted in QST, CQ, Popular Communications, Monitoring Times, Worldradio, and possibly others I didn't read) that the two frequencies FCC received the most complaints about (14.303 and, I believe, 3.950) were frequencies where the operators had to pass code tests in order to obtain privileges to operate there.

In a way, I guess we're lucky - if the Liberty Net hadn't attracted all the jammers (and counter-jammers) to the one frequency they'd have been...well...freely roaming the bands.

>So when a few thousand refugees from way up there descend onto the HF bands
>-as some have very recently indicated their intent right here on rrap- and lonely Riley is left
>to sweep up,. just how much enforcement you think there'll be?
>But press on- it's "kill the code" even if it kills us.

Dick, the code isn't stopping those few thousand refugees from descending into the HF bands now, and it wouldn't stop them from doing so in the future even if we continued to have a code test for the next 267 years...any more than it has stopped them from inhabiting the so-called "freeband" which is another place they don't have any privileges or licenses to operate.

The *only* thing keeping unlicensed operators off the ham bands in droves is the well-known determination of licensed hams to keep them off of here, even if it means going out at 3:00 AM in the middle of an ice storm to do some DF'ing and tape recording. That's it, period. The code test is not now, never has been, and never will be a deterrent to anyone contemplating an act of gross stupidity on the bands...and that applies to hams and non-hams alike.

Too bad you fell short, I need Timbuktu. :-)

>Now, it's popular and OK to just make the declaration!

Popular? Perhaps, in some circles. Popularity doesn't prove
correctness, though.

I'd point out that Hitler was pretty popular in Germany once upon a
time, but N2EY might call up the Godwin's Law police and have them
lock me up, so how about...burning witches at the stake used to be
pretty popular once upon a time.

>If CW is used as a "filter" to keep anyone of the ARS; then it's plain
>wrong.

Doesn't keep anybody out of the ARS anyway. Just keeps them from
getting a license that grants HF privileges, forcing them to either
find a control operator who's passed a code test, or work VHF/UHF.

57. IMPORTANT! FCC OET extends Reply Comment Period on BPL

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-01 20:05:34 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <iKzWa.2315$lL.372712@nnrp1.ptd.net>
Source record: 73470

Today the Ed Thomas, Chief of the FCC's Office of Engineering
and Technology, issued an order extending the Reply Comment
period in ET Docket No. 03-104 (BPL) until August 20, 2003.

Remember, paper filed comments are due at the correct address
by COB on the deadline day, electronic comments via the ECFS
have until midnight at the end of the deadline day.

FOLKS ... if you are going to comment, PLEASE don't "flame"
the FCC or the proponents of BPL ... just cite facts (the ARRL's
comments and the excellent technical analysis done by Ed Hare
are full of them ...).

Flaming will hurt us more than it will help us.

Keep it calm, rational, and polite, please, for all of our sakes.

73,
Carl - wk3c

Yessir. Ya had to learn operating skills along with learning just the
code. Whether ya wanted to or not. There was no "pause" button on W1AW
and ya couldn't replay it either.

I saw some *really* off-the-wall Novice rcvrs. One buddy of mine
comandeered an old wooden case Philco BC/SW rcvr which didn't have a
BFO. Musta had a 15 Khz "bandwidth". So he copied the thumps the
speaker cranked out. Some time later he managed to pick up a
half-working grid-dipper and tuned the dipper just off the sides of
the incoming signals and viola, hetrodynes he could copy. As long as
he had his mitts on both tuning knobs. I came along and had a
brainfart. I fished an insulated wire down inside the last IF can and
wound the other end loosely around the GDO coil and tuned the GDO to
455 kHz. Instant BFO. He took it one step further yet and added a
gawdawful narrow passive surplus audio filter and cruised all over
40M with that lashup. The homebrewed TX was another Rube Golberg gem,
some xtal oscillator tube driving a 6146, all of it in a cigar box.

Imagine any nocode even considering jumping thru those hoops just to
get on the air.

> The upside was that the Novice bands were absolutely packed with slowspeed code and finding lots of
> practice was no problem. You also learned to copy the many and varied 'fists', it was all hand sent, no

> skills that no one today gets. I still enjoy copying hand sent or bug sent code, unless

it's *really*
> butchered.

Absolutely correct. It goes farther than that though.

As much as a pain in the butt as those days were in a number of
respects that regime had a number of huge advantages over what is
available today to newbies. The Novice bands were actually a very
successful "support group", we had no options but to clump together
and work with each other toward the same objectives. We climbed all
over each other trying to get our speeds up and beat the one-year
clock on our drop-dead tickets.

Boy there was the incentive licensing move from Hell! But it worked
and the only bitching I ever heard was from a few of the OFs who
turned their noses up at the mere thought of allowing newbies to get
on the HF bands with a lousy 5wpm code test. Turned out to be a
non-sequeter for them 'cause the FCC tossed us into our isolated
playpens 'way up the 80 & 40M bands where they didn't have to put up
with us. We *had* to work each other. Clever arrangement in
retrospect.

And in many if not most cases getting a Novice station took a bunch of
self-taught knowledge and work just to get on the air. All of which
were more learning experiences. One did not use a rubber-duckie or any
otjer catalog antennas on 80 . . autotuners . . as if . . digital
nothing . .

No doubt a dumb-down proponent or two will scan this diatribe and get
some giggles out of the ramblings of another stuck-in-the-past grouchy
OF. But in the end who will be the **real** losers?

Yeah, there's a "cultural gap", fuggem all, I hope they get just
exactly they want.

> > I'm still a very strong supporter of learning Morse via the W1AW
> > code practice sessions.
>
> It's probaby the best training resource around if one owns a receiver, especially after
one has learned
> basic Morse.

Yup. Lotta newbies have used zero-cost borrowed rcvrs. I'd loan one of
my "spares" to anybody who was genuinely interested in copying W1AW.
I "loaned" my old HQ-120 to the kid accross the street, he then loaned
it some other kid . . . I have no idea wher it finally landed.

> to listen to.

I sure built my share of rcvrs. At least in my case finding the ham
bands didn't seem to be much of an issue and there wasn't much to
learn about how to use 'em. Under any conditions I'd rather try to
find 40 with one of those than I would the first time I sit down in
front of any of the current riceboxes. Heh.

> Did not know W1AW existed when I was studying for Novice so I
> listened to other hams.

I probably "got around" more than you did and I did a lot of "radio"
before I finally went for my Novice ticket. Early tinkering & tuning
led me to working on my Boy Scout Merit Badge. Which was basically an
ARRL publication and everything a newbie needed to know about W1AW
code practice sessions was in the Radio Merit Badge booklet. I still
remember buying it from the Boy Scout department in the Lit Brothers
store at the bottom of the Hill. They special-ordered it for me.

I was also all over the Red Arrow, PTC and PRR commuter lines at a
tender age. The newsstand in the PTC waiting room in 69th Street
Terminal stocked 73 and CQ and occasionally QST. I always scarfed one
of 'em up if I had enough pocket change. I picked up a lotta info from
those long before I got my ticket. Then there were my ham buddies in
UDHS. By the time I actually got on the air I was pretty well primed.

> >I'm still a very strong supporter of learning Morse via the W1AW

> wpm.

They definitely did not use Fransworth back when I was getting
started. I wish they had. Once I got my General it was goodbye W1AW
code practice for years until I went back to clock myself at 25-30wpm
for the Extra in the same timeframe in which you were getting started.

> Bulletins are sent at 18 wpm so there's even more practice.
>

W1AW has plenty of sessions per week, I dunno, I seldom had any
particular trouble making myself available for the evening sessions.

>BTW I held CB callsign KIQ8934, c. 1970.

Well ain't that just sweet. And you are the twit that accuses
others of coming from 27 MHz. You're little more than a
flaming hypocrite of the first order. A CB retreated loser.

And regardless of how silly all of your other arguments are,
such as your statement that you knew of no hams that lamented
the loss of 11 meters, your claim that the difference between CB
and Amateur Radio is the *code test*, is utterly absurd.

The difference is having an *appropriate* *technical* *test*
that pertains to what the Amateur Radio Service is today. In
1960 when I was first licensed a code test was most certainly a
valid part of such an appropriate test, but it hasn't been now
for 20 years at least.

All you are is a narrow minded bigot that wants a play pen that
elevates you to king of the sand box and keeps other who might
challenge you out.

I held a commercial telegraph license, and worked for a company
that actually paid (other) people to operate CW, but the last
commercial CW operation was *decades* ago now. And that is
exactly when the code requirement for the Amateur Radio Service
should have been removed.

Now, why don't you just slide back under the 27 MHz rock that
you slithered out from, dick.

No it's not to keep them out but to insure that they KNOW the rules and regulations and good operating practices when they do make the transition to ham radio. Given some of the questions that licensed hams have asked about the rules and regs that they should already know since they have passed the tests, I'm inclined to think that stiffer exams are necessary to insure that ham radio doesn't turn into a mess due to ignorance on the part of otherwise well intentioned new operators.

Since were on a trip down memory lane. This is how I received my FIRST HAM
SIGNAL.

I had a 6 transistor jap radio. I started 'tweeking' the coils and heard
this booming CQ CQ CQ this is W*xx.....He was down the street on the next
block.

Its been downhill eversince

The discussion was about HF/MF. Sorry if I confused anybody.

Main point is that there is NO exclusive CW space anywhere on the <30 MHz ham
bands. And the percentage of HF/MF bandspace available to 'phone-image is
already way above 50%.

>themselves.

Nope. FCC is chronically short of $$ and there's no way they'll take that job
back unless there were radical changes both internal and external.

Think about the total number of hours donated by every VE and then figure what
that would cost FCC to do themselves. VE fees cover the cost of providing the
materials but NOT the labor..

sounds like a lot of work. if you want full service web hosting with email
to yourcall@yourcall.com try calling your isp and see if they offer that
service. many local isp's will handle all the registration and redirection
to your own domain name for a very reasonable monthly charge... and its
one-stop shopping with built in tech-support. the next level down from that
is to use the free web space that many isp's give you with your dialup or
cable account and use someone like register.com to register your domain name
and then redirect it to your page on your isp's server.

Here's the French version of the Belgian announcements:

IL N'Y A PLUS D'EXAMEN DE TELEGRAPHIE ...

Nous avons �galement appris que l' IBPT n'organisera plus d'examen de t�l�graphie. L'examen qui avait �t� annonc� pour le 22 octobre 2003 est donc supprim�.

Les examens B et C (ON1 et ON2) pr�vus pour le 3 septembre 2003 auront lieu comme pr�vus, avec la m�me mati�re � conna�trer, et avec les m�mes degr�s de difficult�s qu'auparavent. La seule diff�rence est que ceux qui r�ussiront l'examen B (anciennement l' ON1) recevront maintenant automatiquement un indicatif ON4-5-6-7 et ils auront directement acc�s aux bandes d�cam�triques.

DE BONNES NOUVELLES POUR NOS AMIS ON1

Nous venons de recevoir le communiqu� suivant de l'IBPT concernant les radioamateurs.

Suite aux r�sultats de la CMR-03 relatifs � l'obligation pour les radioamateurs de passer un examen de morse pour acc�der aux bandes de fr�quences en dessous de 30 MHz, l'IBPT a d�cid�, � l'instar d'autres pays de la CEPT, d'appliquer cette d�cision d�s � pr�sent.

De ce fait, tout radioamateur titulaire d'une licence "B" peut demander une licence "A" � partir du 4 ao�t 2003.

Pour ce faire, il doit envoyer � l'Institut un courrier reprenant toutes ses coordonn�es accompagn� d'un timbre fiscal � 5 € non annul� par licence demand�e.

Un indicatif ON4 � 5 � 6 �7 lui sera attribu� en tenant compte de ses d�sid�ratas �ventuels et il recevra sa nouvelle licence ainsi que la facture y aff�rent par retour du courrier.

Le conseil souhaite de bonnes transmissions dans les bandes HF aux nouveaux titulaires d'une licence A.

Those pagers may not be in the ham band. If they are close by, you may be suffering from intermod.

While I truly don't care about the code/no code issue, I do worry about watering down tests too much. If we gave licenses away and managed to keep it from becoming another 11 meters, who (once all of those old guys you talk about die off) is going to put up repeaters, much less maintain them? If the folks that want to learn something about amateur radio get into the game, there won't be a problem; if it turns into nothing but a hobby band with no one technically competent, your HTs (and a lot of the 440 stuff will turn into nothing more than high-end FRS units. You can expect perhaps 5 to 6 miles maximum between 5 watt HTs with gain antennas. Perhaps 10 miles between mobiles with 50 watts. Putting up an hf antenna may become too much for some folks (sure, buy a commercial antenna and mount it on a tower. Not good for 80 meters.). What you would lose is good, reliable, 20 to 300 mile communications. The repeaters can supply 20 to 100 mile range; 75 and 40 meters can supply good range (depending upon local time) from local to hundreds (or thousands) of miles out. You don't need to contact England. Neither do you need a station 1000 miles away. Usually, you need stations anywhere from 50 miles out to perhaps 300 miles if you have a wide spread disaster (such as the ice storm perhaps 5 years ago in the North Eastern U.S. and Canada). Without repeaters and/or HF mobile hams (you think 11 meter antennas can drive you crazy, wait until you try to get any kind of efficiency on a 75 meter mobile antenna). Of course, if the ham bands go, you'll have folks trying to drive their cars with two cell phones (one for each ear) trying to carry on two conversations at once whilst attempting to drive their vehicle (cell phones, pagers, satellite tv, satellite radio, wireless digital, video, cameras - these are what the commercial interests need the bandwidth for). Yeah, I hear about the internet too. My ISP at the time was down in Rochester for a couple of weeks due to the attack on the twin towers in NYC - over 300 miles away! You'd only need a small earthquake to kill the cellular telephones (10,000 people pick up two cell phones each and call 911 - "did we just have an earthquake?" - or - "we just had an earthquake!"). There is a considerable movement now to exclude amateurs who have not had training and recent field experience from getting involved in emergencies (unless no one else is available) since this can cause more problems than it solves. We don't need less training and knowledge; of that I am certain.

>So did you ever figure out why the FCC evaluated it last time, and why
>they have to review it again in the future?

Because The Congress said "no rules review, no appropriation".

Of course, the scholars and wonders at the FCC didn't read between the lines and figure out that The Congress was aiming at broadcast and cable and telephone competition rules, so they could kiss off things like personal radio services.....

Those are the areas that The Congress want to control, so they have no concept that the others exist and care less. For the average amateur, the reverse is true.

Consider that the typical three-day-weekend hamfest/convention costs about $300 excluding transportation if one is not lucky enough to live in the immediate area. Add to that transportation (for me usually about $150 when I go to Pacificon, quite a bit less when I go to Seapac) and it gets to be "real money".

OK, so I'm 66 years old and have been a ham for 52 years. When I started out as a hugh school student, all the hams I knew were my age (high school and college friends) and none of us could afford going to a ham convention. Some of us would go to the Institute of Radio Engineers convention exhibit in New York (local to us) on the last day to see if we could scarf up samples of components (capacitors, resistors, tube sockets, etc) which the exhibitors would give to young hams just as the exhibit was closing. Those days are gone (sob).

Our local ham club - the largest in the state - has quite a number of young hams as members and we encourage programs to interest young people in becoming active in ham radio. Some of our regular 2-m net weekly checkins are folks less than 16 years old.

Ya know...I got to looking at my statement and it probably should have said,
"If CW is supported as a method to keep people "out" of the ARS..."

Of course its primary purpose for being a test requirement is to prove one
can use it. ;)

Mike, it's some more of his lying. What was said was that FCC might as well just shut down the
ARS as to turn it over to the outlaws. And he twists it to mean what he wants it to mean.

Of course! All three dozen of them, out of over half a million hams! Actually that's not a bad
percentage at all, even a couple thousand yo-yos out of that many licensees is a strikingly small
ratio of bozos to real folk.

> In a way, I guess we're lucky - if the Liberty Net hadn't attracted

Yep, they seem to flock, don't they? So what happens when their numbers grow
exponentuially by the "inclusion" of all the neanderthals who so far just couldn't hack it? Wanna
see Liberty Nets wall to wall on 75??? It's in the wings.

Come on, wake up John. The ham bands are no where near anything like 27 mhz and you know it, But
they ARE a whole lot more like it than they were 20 years ago, speaking from experience. Try as you
will, you just can't refute the facts and what I laid out is fact.

>

THAT is correct. Working unlicensed hams is just not acceptable, and no
selfrespecting ham will willingly do so. Since few bootleggers, as far as we are able to determine,
are adept at carrying on a real life amateur radio contact-tho there has been some pretty slick
Slims in the past- few if the people under discussion will even bother to try. So what happens then
when ham radio licenses become so easy to get- with the code 'barier' gone- that the lack of a
license is no longer
the stopper? Chew on that one a bit.

> The
> code test is not now, never has been, and never will be a deterrent to

> park or do a three point turn.

That ridiculous, Mike. Surely you must be joking. That premise is absurd at its very core. It's basically saying nearly half the Hams today, those without code skills, didn't actually want to be involved in Ham Radio - that all their money invested in radio equipment and efforts invested in activities were done because they didn't really want any of this. And that, in the end, only a code test will prove they actually did want it. If I didn't think you were serious, I'd be laughing at this point.

> (snip) We do already have indications of what
> the spectrum of behaviors are. Right now, those
> who favor less knowledge have the upper hand.

Okay, now I'm laughing. Where are all those people who have the upper hand (the ones who favor less knowledge)? There must be many thousands of them if they have the upper hand. I've been involved with Ham Radio for a number of years now and I have yet to hear all those people advocating less knowledge about Ham Radio. I haven't seen any web sites stating that goal. I've never talked to a person on the radio who has stated that goal. If these people actually exist, they must be the most secret group in America.

Hey, it's Frozen Floyd!!! How's things up there north of the North pole, Gud Buddie??? Shootin' lots of skip on the upper side these days? Sure must be awful, having to slither through all that permafrost getting NO sleep in all the wall tyo wall daylight! Life's a bitch and then you die!

Yep, Gud Buddie, I was there at the very beginning, even before the beginning, when 11 meters was a fullfledged ham band. But it sure wasn't used much and - like I said- I knew no ham who lamented it's reassignment, in fact most hams I knew thought it a neat idea. We liked radio and knew some ordianry folds who used CB would get to liking it too, and become hams, especially if us hams got on CB-with licnses, of course- and talked them into it. And that was the way it worked, for a time. Then the scabs came and ran out the normal folk....

An would you believe there's more? In the winter of 1958, as a student I and the gentleman I worked part time for *built* a pair of CB sets to use in his business. Yes, BUILT them, from an article in Popular Electronics. He (a ham also) ordered the parts and we put them together like kits. All very legal and above board at that time. There were NO commercial CB sets yet on the market.

But hey, you missed all this! You weren't even licensed as a ham 'til 1960, and from your postings, you never were active enough to know what went on. even then.
So I suppose we'll just have to POOF! blow you off like the rest of the lightweights. All talk and no walk, that's our snakey friend from the frozen north. Must be a real pain slithering you way across the frozen tundra. But carry on! You can do it!

>
> And regardless of how silly all of your other arguments are,

So you think there's a technical test involved in ham radio licensing today?
Really? Have you even seen a test lately? The question pools which not only
give all the questions with their exact answers, till recently they even listed the
answers in the same order in the pool that they appeared in the tests. Some technical
test! No surprise that so many new hams today are not literate at all on the material
ton which they were just tested. No one ever said the tests, especially the entry
levels need be difficult nor cover that much technical material, but what we have
today is simply a sham. And you should know it, but clearly do not.

Dare I note that you're an ignoramous of the first magnitude? Yes I dare, in fact I
'll state it unambiguously and most forcefully. It's rare that you'll ever encounte
another ham who has been personally responsible for so many hams becoming licensed.
of ALL classes, including many codeless techs. Not only did I do this willingly, I
did it voluntarily and for the most part eagerly. On Tuesday night after our test
session I always stayed up until all the paperwork was finalized and ready to drop
into the post office first thing next morning on my way to work at 6.
Need I say I never got more than a very few hours sleep on those workweek nights?
Have you done any of that Frosty Floyd?

So now you're working to get a "remote licensing" system for the Alaska outback.
Wunnerful! That'll never be compromised, I'm sure!

Floyd, you really need to move down to the lower 48 where you can try to stay in
contact with realty. The US Coast Guard dropped the Maritime 500khz wartch four years
ago. There is still commercial CW in many places in the world, not that it matters to
us hams. If you really think that CW in ham radio is dead, well you should try
turning on a HF receiver at once in your lifetime and tune it down to the lowe end of
any HF band, assuming you can find one. Surprise, surprise!

Hey, it's Frozen Floyd!!! How's things up there north of the North pole, Gud Buddie??? Shootin' lots of skip on the upper side these days? Sure must be awful, having to slither through all that permafrost getting NO sleep in all the wall tyo wall daylight! Life's a bitch and then you die!

Yep, Gud Buddie, I was there at the very beginning, even before the beginning, when 11 meters was a fullfledged ham band. But it sure wasn't used much and - like I said- I knew no ham who lamented it's reassignment, in fact most hams I knew thought it a neat idea. We liked radio and knew some ordianry folds who used CB would get to liking it too, and become hams, especially if us hams got on CB-with licnses, of course- and talked them into it. And that was the way it worked, for a time. Then the scabs came and ran out the normal folk....

An would you believe there's more? In the winter of 1958, as a student I and the gentleman I worked part time for *built* a pair of CB sets to use in his business. Yes, BUILT them, from an article in Popular Electronics. He (a ham also) ordered the parts and we put them together like kits. All very legal and above board at that time. There were NO commercial CB sets yet on the market.

But hey, you missed all this! You weren't even licensed as a ham 'til 1960, and from your postings, you never were active enough to know what went on. even then.
So I suppose we'll just have to POOF! blow you off like the rest of the lightweights. All talk and no walk, that's our snakey friend from the frozen north. Must be a real pain slithering you way across the frozen tundra. But carry on! You can do it!

>
> And regardless of how silly all of your other arguments are,

> that pertains to what the Amateur Radio Service is today.

So you think there's a technical test involved in ham radio licensing today? Really? Have you even seen a test lately? The question pools which not only give all the questions with their exact answers, till recently they even listed the answers in the same order in the pool that they appeared in the tests. Some technical test! No surprise that so many new hams today are not literate at all on the material ton which they were just tested. No one ever said the tests, especially the entry levels need be difficult nor cover that much technical material, but what we have today is simply a sham. And you should know it, but clearly do not.

No, I don't consider you anything. However, I am a bit frustrated that my comments are being twisted to apply to arguments I never made. Throughout this discussion, my comments have focused solely on Brian's argument for stiffer written tests. Since then, my words have been twisted to apply to the current tests and to some potential future tests that don't even exist yet (and will very likely never exist). Likewise, code testing has been added to the discussion - a subject I've tried hard to avoid over the last two to three years and tried to minimize in this discussion. I'm not here to debate the code tests.

>> Brian's idea of stiffer written exams don't

>
> Wanna guess who I respect more?

See what I mean? I made a comment about "Brian's idea of stiffer written exams" and you responded with comments about code testing.

Lets try to get pass this issue once and for all. I've never complained about the code tests being too hard, nor have I ever said they were unfair. I don't care about code testing. In my opinion, with the recent ITU changes, this issue will soon be dead anyway.

Further, to clarify another issue, my comments about excluding people applied only to the idea of using license requirements solely in an effort to exclude - I didn't introduce that premise, those specifically advocating the exclusion of others did. If you're one of those people, and those are your ideals, I don't really care to know who you're proud of or respect.

Right you are, Dwight. The FCC did - way back about 1912
(actually their predecessors)

ALL licenses exclude those who don't meet the qualifications, and include those
who do. Why else would they exist?

That may be true. I never said it was a good idea. I only said that it's the government's option, good or bad.

There's one and ONLY one reason why the So CA amateur community allows it - it keeps them off the rest of the repeaters! :-)

I disagree - neither sloppy nor dishonest. It's all that their function could
justify - and perhaps all that they really care about. Changing the bandplans
or anything else to have to do with morse code they simply leave for others,
because it's outside their little world.

AH! Someone who is now on the verge of understanding what that "wierd" thing I said was. IT was a "sunset clause" and the change to S25.5 was the "sunset."

> I don't really see how that throws anything into chaos. Right now no-

> permissible, then from the FCC perspective it makes an enforcement problem
> go away!

It doesn't make it permissible. What it did is REVOKE the authority for those Novices/Techs to operate on HF at all. The problem STILL GOES AWAY because NO ONE has the privilege. The FCC doesn't have to worry about who's has a Technician Plus legacy license, a renewed Technician (with code credit), or a Technician with code credit in hand (that they don't know about) - it doesn't matter; Technicians (and Novices) don't have any HF privileges anymore. "The sun has set."

[This also explains why Tech Plussers received Technician licenses upon renewal. The license class, and now its privilege, has been disposed of in a very seripticious, systemic manner.]

They are supposed to make those provisions. If they did not, they were in the wrong. However, I would not favor them using hand sent code with an oscillator for two reasons. 1) Oscillators are often not adjustable in pitch. 2) Some people who copy quite well have absolutely lousy fists and do not send good clean code. It takes a pretty good op to copy some of the people out there.

There is a huge difference in requirements necessary to meet a certain goal or purpose and requirements designed to exclude those we doesn't like, Dick. I'm sure you know that. And I'm equally sure you know this discussion is about the latter.

> All show. No go. The usual.

it is nice to know that the fcc is still in the enforcement business and has gotten at least one 11m trucker off the 10m band! as reported in the latest ARRL Letter:
<quote>
==>FCC WARNS TRUCKING FIRMS ABOUT ALLEGED UNLICENSED 10-METER OPERATION

The FCC Enforcement Bureau has sent Warning Notice letters to three highway transportation firms asserting that drivers of some of their vehicles may have transmitted without a license on 10 meters. The notices allege the unlicensed operations took place July 8 on Interstate highways in South Carolina.

Letters went out July 14 from FCC Special Counsel Riley Hollingsworth to Jolly Roger Capital Ltd of Columbia, South Carolina, Tidewater Transit Company of Kinston, North Carolina, and Shuford Lumber of Marion, North Carolina. He warned all three firms that operation of radio transmitting equipment without a license could lead to fines of up to $10,000, equipment seizure and even imprisonment.

Hollingsworth asked all three firms to get in touch with him to discuss the allegations. He told ARRL that one of the companies already had responded and required its driver to remove all radio gear from his truck.

<unquote>

So they do have some resources to go after unlicensed 10m operation!

Source record: 73522

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of July 31, 2003:

Novice - 33,409 (decrease of 15,920)
Technician - 257,791 (increase of 52,397)
Technician Plus - 66,704 (decrease of 62,156)
General - 141,381 (increase of 28,704)
Advanced - 83,141 (decrease of 16,641)
Extra - 104,453 (increase of 25,703)
Total - 686,879 (increase of 12,087)

Yup. That's true.

They also had to pass at least two written tests to operate there. The written
tests are largely about the rules and regulations of the ARS. Obviously those
written tests didn't keep those ops out of the ARS, nor cause them to behave
correctly. Should we just dump those written tests because they did not work
perfectly?

Also - what mode were those folks using on 14.313 and 3.950?
>

No, there's another part: the fact that there may be some enforcement action as a result of that determination. Didja see where FCC cited a couple of trucking companies because of truckers' illegal use of 10 meters?

>The
>code test is not now, never has been, and never will be a deterrent to
>anyone contemplating an act of gross stupidity on the bands...and that
>applies to hams and non-hams alike.

Then please explain why there are so many NALs for violations committed using voice modes, and so few for violations using Morse code or data modes. Maybe it's not the TEST but the MODE that has an effect?

Dick,

EVERY time there has been change of any real sort in ham radio, there
have been cranky olde fartz like you preaching "end of the world" doom
and gloom ... and every time it has not come to pass ...

Witness:

conversion from spark to CW;
conversion from AM to SSB;
introduction of packet radio and other "new-fangled @^#%$ computer
thingies";
the introduction of the no-code Tech license;
restructuring 3 years ago;

and many others I'm sure I've omitted.

The point is, the world (and ham radio) is NOT going to end ... despite
your rants that it is.

Actually, on the contrary, if these changes hadn't happened and we were still stuck in the spark era (i.e., if cranky olde fartz like you had stopped
the progress of ham radio over the years), we WOULD be in danger.

If you want to see what presents the biggest danger to the future of ham radio LOOK IN THE MIRROR ... the enemy you fear is yourself, with your backward thinking, unwillingness to accept progress, and lack of tolerance for newcomers (unless, of course, they've suffered through the same fraternity hazing rituals that you had to endure, lo those many years ago and think in exactly the backward, narrowminded ways that you do).

When you're done looking in the mirror, you can look a your cronies, Larry, Dave Heil, and the whole list of like-thinkers... they are also part of the enemy you fear ... for they think and act essentially the same way as you do.

THERE is where the REAL danger to the future of ham radio lies ... in people who are so married to/stuck in its past that they despise any thought of change, progress, and the newcomers that it will bring (unless the newcomers are acceptable "clones" cast in your own image).

However, those newcomers are the future of ham radio ... for us older guys will surely die, and if there aren't younger folks to replace us ham radio will die with us. It's up to us to WELCOME and ENCOURAGE them ... their ways will not be the ways of the past ... things change and nobody can freeze time. But insulting, berating, demeaning them, and trying to keep them out is not the way ...

Think about these things long and hard before you look yourself in the mirror again ... without some reflection, reconsideration, and change in your ways, you may not like what you see ... the enemy that is YOU.

(Try to be *completely* like Scrooge ... go through the change, don't stay stuck in the first part ...)

"sunset."

It is NOT a sunset clause ... NCI specifically asked for a sunset clause
so code testing would "automagically" go away when S25.5 was suppressed
or changed so that code testing was no longer required by the ITU Radio
Regs.

The FCC SPECIFICALLY declined to enact such a sunset clause, and the
text of 301 does NOT contain one, no matter how you try to twist it.

Again (and again ... you people must not be able to read, only write) ...
the FCC *DOES* have records of which Techs have 5 wpm credit and
which don't ... this idea that "there are no records, so you can get away
with it is 1) false, and 2) borders on inducement to violate the rules.

If someone follows your (VERY BAD) advice and gets cited for it,
I hope they explain that "(fill in the names from usenet) told me it was
OK" and the FCC comes knocking on your doors with citations for
#2 above ...

[remainder of totally incorrect psuedo/quasi-regulatry crap deleted in
the interest of not further perpetuating/propagating misinformation ...]

So? Your point? Is that something that should call into question
the NCVEC as being invalid, illegal, or fattening?

So? Hams also use differnent languages (Engish, Spanish, Chineese, etc.)
yet no one is mandated to use or be tested in any language other than
that of their "home" country.

> The Amateur Radio Service is unlike other radio services in its needs and
> resources.

So are you sying amateur radio "needs" morse code testing? If so,
the burden of proof hasn't been met as per FCC R&O for 98-143.

> > Radiotelegraphy in the maritime service has been phased out in favor of

> Most radio amateurs are not on ships.

So the validity of having a trained morse pool even 20 years ago
wasn't or shouldn't have been because other services used morse.
Interesting, did you make that comment when no-code was first proposed?

The statement isn't one of USE, it is based on a prior
international requirement...now gone, dead, caput, finito, over.

> Other services are constrained by considerations of cost, particularly
labor
> cost. They consider elimination of the need for a skilled radio operator
to be
> progress. Amateurs do not.

You speak for "all" amateurs? Perhaps you should have said "some"
amateurs. In any case, learning morse does have a cost to each
and every amateur that does so. I see no reason to "mandate"
that cost upfront for access to amateur radio.

> To most other radio services, radio is but a means to an end, not an end
in

The point still comes back to the fact that NO other mode
requires any skill test. It is that simple.

Are YOU proposing an end to written tests?

> Most radio amateurs do not construct or repair their own equipment, yet
they
> are required to know something about how it works.

Because they "can" if they wanted to. If a non-coded ham gets
on the air to learn using morse with another ham...what's the probably
harm to others and or anyone compared to constructing or repairing
equipment themselves?

> > While it continues to serve some amateur operators well, as it did in

More because saying "FU" via code isn't likly to be listened to by
any non-coded ham or non-ham.

ZIP - false, since any one subject CAN be ingnored and the test
applicant can still pass. Not so with the separate morse
test element.

It's certainly possible, but in this day and age, I could see prospective amateur one complaining that the custom test was too easy or too hard, or complaining that he or she wanted to take the test from a CD instead of a real person, or some other such.

Almost all of us can handle the standard test methods.

The rest can be accomodated for.

Over the course of my testing, I took tests at 4 different places: Williamsport PA, Butler PA, State College PA, and Lock Haven PA. ALL the VE teams were extremely helpful and accomodating. Those who knew of my hearing problem when I took Element 1 (twice, cuz I flunked the first time) were just great. The first time I took the test, they were more bothered by my failing it than I was, and the second time, I spoke to one of the VE's beforehand, and he outlined the different methods I might use, and explained the lengths they were capable of going to to accomodate my needs.

I just want to point this out, because the tone of you letter sounds like you think that VE's are some sort of ossified "my way or the highway" people. They aren't.

> Simple, the old-timers are not interested in new ideas.

Your statement is not substantiated by fact.

> One example would be holding on to Morse code and pressuring new Hams > to learn Morse code and excluding those that don't want to learn Morse > code.

The first part of your statement is not "an example" at all. Morse code has demonstrated its usefulness and is still widely used in amateur radio. Someone might "hold on" to morse code and be very active with newer modes or might be involved in electronic circuit design.

The second part of your statement, the one about pressuring new Hams to learn morse code is unsubstantiated by fact. Some new hams don't want to learn morse code and don't. Some new hams find the world of HF radio exciting and want to participate. They learn morse code. Some new hams find HF interesting and have decided to "wait it out" in hopes that there'll be no morse testing in the future.

The third part of your statement, dealing with the exclusion of those who don't want to learn morse code, is unsubstantiated by fact. What evidence can you present to support your claim? From what would these folks be excluded? You've participated in meetings. You've been part of operating events. How have you been excluded?

> Another example is most
> old timers want to just make random contacts and are not interested in > the technical aspects of the hobby.

How do you know what "most old timers" do and what they are not interested in? I know old timers who are very technically inclined and I know others who participate in nets and who keep weekly or daily skeds. Those are not "random contacts".

> I have proposed new ideas, projects, etc. I didn't say I just want > others to do those projects for me. I would help with those projects - > if there were interest. I have asked to volunteer for those types of > activities on several occasions. The old-timers in the club are NOT > interested in those types of activities.

Nothing precludes you from tackling projects which interest you. "Old timers" might not be interested in the particular projects you've proposed. They might not be interested in such as group activities. A third alternative is that your personality grates on them.

> However, they will put extra effort into teaching code classes to
> get people to operate Morse code.

Operate or learn? All of them, en masse put in extra effort or just some of them put in extra effort? Why do you object if someone desires to do something which is different than what you desire?

> Don't blame the newcomers - its the old-timers that want to keep
> things as they are.

First you'll have to come to an understanding of what it is which "old timers" want before you begin to lecture us or them from your rather shallow pool of knowledge on the subject.

You can't purr like a kitten in one thread, Dick, then turn around and lose control in another. The premise being discouraged here is that the CW test would be seen by some as a way to keep *unwanted* people out of ham radio--not just people in general.

I would suspect that there are many nitwits in this newsgroup who support the idea of CW testing being a good way to keep someone, like me for example, out of the ARS. Their idea is a waste of time, of course because a) I am a coded ham, and b) CW testing does nothing to keep creeps out of the ARS. I won't mention to you how I know that.

Well, in the worst case scenario, APP is exactly right. We *will* have to
make adjustments. Here's my thought: this is going to happen time and time
again. Frequencies are prime real estate right now and will get even moreso
in the future. This is not going to go away.

>
> Critical everyone submits a reply comment ASAP.

Good idea. Make everyone think uniformly...yeah, that's the ticket! On the
other hand, those who have no idea what BPL may be about, what impacts it
has, etc., will be "following" something they have no idea about. Maybe BPL
is a bad thing for ham radio, but maybe it's a good thing for us as a whole.

Do I want to accommodate ham radio, or the rest of my fellow citizens and what this may do for them? What alternatives would the commercial interests have to BPL technology, and how much would that cost us?

Gosh, those are just a few questions people may encounter, and I am probably now going to be lambasted for thinking about the majority...LOL what a concept.

You aren't much younger than I am, Carl. You just haven't been involved in amateur radio as long. Further, you remained a tech for a couple of decades until the morse testing speed was dropped. Since that time, you've become an HF SSB op. This latest rant shows you to be as cranky as anyone else here.

> If you want to see what presents the biggest danger to the future of
> ham radio LOOK IN THE MIRROR ... the enemy you fear is yourself,

I note that you've reverted to your original "Big Mouth Carl" persona, Squiggy. The leopard does not change his spots, even if they fade and his coat begins to look a little worn and thin in places. Your tirade includes some tired and quite familiar terms like "fraternity hazing rituals", "suffered" and "endure", "backward" and "narrowminded".

> THERE is where the REAL danger to the future of ham radio lies ...
> in people who are so married to/stuck in its past that they despise
> any thought of change, progress, and the newcomers that it will
> bring (unless the newcomers are acceptable "clones" cast in your
> own image).

I submit that you don't really know where the "REAL" danger to the future of ham radio lies. Simply lowering requirements and standards is not "progress" in anyone's book. Newcomers have always been welcomed if they're good ops. A lid is a lid and we already have enough of them.

> However, those newcomers are the future of ham radio ... for us older
> guys will surely die, and if there aren't younger folks to replace us ham
> radio will die with us.

There have always been newcomers in amateur radio. Old timers always die and newcomers always arrive. Newcomers may be the future (a great many newcomers have gray hair) but we're the present, not the past. The future has not yet arrived. Even you don't know what the future holds,

as much as you'd like to see yourself as a visionary.

> It's up to us to WELCOME and ENCOURAGE
> them ... their ways will not be the ways of the past ... things change and
> nobody can freeze time.

I welcome and encourage them. Some of them will become good ops. Some
won't.

> But insulting, berating, demeaning them, and trying
> to keep them out is not the way ...

I'm not insulting, berating or demeaning them. I might insult, berate
and demean you but not them. Newcomers aren't required to take
responsibility for you.

> Think about these things long and hard before you look yourself in
> the mirror again ... without some reflection, reconsideration, and change
> in your ways, you may not like what you see ... the enemy that is YOU.

I'll take your sermon to heart about the time you begin telling us of
your own soul searching, reflection and reconsideration of opinions
which are unlike your own. Let us know if you like what you see.

> (Try to be *completely* like Scrooge ... go through the change, don't > stay stuck in the
first part ...)

Quit rattling your chains and moaning.

Dave K8MN

There are. They are NCI and the people who want the code test eradicated. And it appears they have been successful. And please don't try to differentiate between Morse Code as a skill and Morse code as knowledge. No one sounds smart trying to make that argument.

I looked through the first several. Of those, this is the one I like the
best:

>
> Nickolaus E. Leggett - response to NA Shortwave Association
>
http://svartifoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6514287539
>

It leaves some things open for debate, as any will. But, out of this comes
my opinion that BPL is probably a risky idea due to the politics of
it--meaning that the power grid for the United States probably should not
become a transmission source for other companies (which would likely be a
step in the future: power companies "renting" their transmission lines for
BPL technology). Sounds like too much regulatory soup to me...

I know many hams who are bothered by this, Kim. They don't participate
in this newsgroup, but they still are concerned. And it really is pretty
hard to argue that complete removal of a test element is not a reduction
in the amount of knowledge needed to pass a test.

No surprise you're confused, Frosty. Yes, I know a LOT about CB. I was there
when it started and watched it turn into a cesspool, remember? Yeah we know,
you're the sort who slants everything to suit the agenda of the moment. Slither on.

>
>
> Hey hypocrite, shouldn't we cross post this to a CB group so you'll be

The Troll you responded to is obviously just that- a troll.

Most hams today weren't around for the beginning of CB and few have any real knowledge of how things evolved there. Of course many hams *came* from CB, and I know that from multiple sources: for one my many years as a VE. From the early 70's MOST people who wound up as hams first learned of personal communications radio via CB. There's nothing whatever wrong with that, and most of them soon learned about ham radio and quickly saw the attraction, put themselves into learnintg mode and made the switch
. It isn't the hams who started in CB that is the problem, it's the many outlaws who also came from it.
Of course you already know this, but some professed oldtimers posting here clearly do not.

And your notes of Carl's history with ham radio seem at most, perfuntory.
They have nothing to do with the fact that Carl posted his comments to this
thread. Unless you believe that Carl must be exactly equal with you before
you consider any importance to his comments. Does one have to be in ham
radio exactly as long as you, be as old as you, have been on HF SSB and CW
as much as you, before you think they're "worthy?"

Those terms are quite appropriately used. Perhaps you like your terms,
better. It's always interesting to note how you quickly change to
name-calling ("Squiggy", "Big Mouth Carl") when you see things you don't
like. Is this another chapter in your book? Go to your library and get a
book on communication--somewhere in there you'll see part where it says that
resorting to name-calling doesn't provide substantiation nor clarification
for thoughts, only provides that the person has nothing more important to do
but resort to infantile pouting.

Well there goes Kandid Karl on his modernize-or-die rant, build 36.

Why can't you just respond to what was written for once instead of twisting what was said to suit your own Agenda? If you don't believe that hams causing serious

enforcement problems in sufficient quantities WILL cause severe deterioration to the ARS you haven't been paying attention. And that doesn't mean paying attention to ME either. YOu haven't beenopaying attention to Riley, ARRL and a host of other heavy duty sources. But that's simply typical of you, Carl. You see what you want to see and ascribe your reasons to all of it.

>

Carl, the temptation to label you as a dumbshit is almost overwhelming. DO you really believe no one but you has benefited from nor been deeply involved in any of the many technical advances in communications, jsut because some of us believe there should remain a code test qualification for licensing? If you're really that stupid you're to be pityed on the level of one who is mentally handicapped.In facxt it seems your hatred for morse code has caused you some serious REAL mental difficulties, or you surely wouldn't go off on such idiotic rants.

>

Ah! So you welcome all the thousands from never-never land who have clearly and repeatedly demonstrated their disdain for anything that even smells like rules and order, right into the ARS as "saviors" of your high tech world! Yeah, we see where you're coming from!

>
> However, those newcomers are the future of ham radio

The REAL future of ham radio isn't in bringing into the service every warm body who ever had a twitch of interest in ham radio. If you believe that- and clearly you do- it just shows the breadth of your ignorance.

> ... for us older
> guys will surely die, and if there aren't younger folks to replace us ham

>

So you'd advocate bringing in any and everyone regardless, and "teaching" one and all. You'll be the role model, of course. And all the outlaws from on high will be eager and willing students.
Right, it's sure to fly. Upside down, maybe.

If you and those like you are the future of the ARS, it's bleak indeed.

Exactly my point. The 5-wpm test does NOT exclude anyone who puts forth a
minimal effort, the 20-wpm does.

That's false logic. One could apply the same to the variation in all other ham radio knowledge.

Wow Carl,

All that below to equate those who support the retention of Element 1 with "the enemy." I repeat, are you sure we're talking about the 5-wpm exam? Sure doesn't sound like it.

Exactly. Except that the written tests, by virtue of their being only one right answer that has already been chosen to be the right one, is much more stable. Yes, sometimes the right answer isn't so right. BUT, by virtue of agreeing to take the test you have studied for, you are agreeing that the right answers are right.

By your observation above, the CW test is dependent on tone quality, morse style, etc. It is not a very stable test environment.

Because he was anonymous?

He/she was probably an FCC or high-up ARRL figure just trying to keep
his job separate from personal opinion. If that is possible, which
Phil Kane has shown cannot. Too many anecdotal stories of how one ham
in the FCC can cause havok for the entire ARS.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

Again your logic is faulty. The code test administration environment is stable. The pitch is predefined. The speed is predefined. The tapes or CDs are made using computer generated code, thus all the spacing is correct and stable. In other words, at the test, one is listening to perfect code and then there is only one right answer. It is even more perfect than the written tests since some of those answers are a bit if you've actually studied and learned the theory rather than memorizing questions and answers.

In both instances, code and written, the person is to pass the test and then improve their abilities in the real world.

Carl,

With all due respect, the above and similar jeremiads from you, Dick, (and whoever) qualify as finalists in the rrap IPOTD (Irrelevant Post Of The Decade) competition.

Look, you have a valid FCC license. Dick has a valid FCC license. I have a valid FCC license. That makes us all members of a group comprising about one quarter of one per cent of the U.S. population. We have strong common interests as a result of that shared status. Let's focus on that.

The whole argument about Morse code reminds me of sail-boaters and power-boaters arguing among themselves about which technology is "most efficient", or "gets through rough water", or whatever, while in the meantime a commercial interest is petitioning to drain the water out of our lake and converting the whole damned place to an industrial park.

Friends, our "lake" of spectrum is in danger of being drained away -- spend your energy and intellect trying to solve that problem which MEANS SOMETHING to everyone of us, instead of arguing over the merits/demerits of Morse testing.

Without spectrum, there is no Amateur Radio.

Not intended as a troll really -- but tongue in cheek (:-)

> > >Ask 100 Hams if they have ever been on CB --- 50% will fess up -- and
the
> > >other 50% are just not telling the truth ---

In the 70's there were a lot of CBers who got tired of the nonsense and got
an Amateur Radio License.

However I have talked with a lot of new hams here and a surprising number
come from the CB ranks -- some still operate both ---
many are into REACT and GMRS

In Calif -- a CHP air patrol used to talk with the CBers below - herding
traffic -- yep you guessed it he/she was "Air Bear"
Colorful colorful CB patter -- Hark the Modulator, Pink Peterbilt, and
Moseying Mama. City Kitty, Dry Box, Bedbuggers, Chicken Lights, County
Mountie, Granny Lane, et al. Fun stuff
See URL: http://listen.to/welfarewally

CB was/is great Americana -- great numbers of folks jumped on the $30 CB
rigs (E.F Johnson even made em)
Hey they even made movies about it !

Nope I have never bad mouthed CB -- just another radio "service" although
with problems as any license free radio would be (will be). CB, FRS, etc.

In the 70's -- I went to a combined Ham/CB store to get xtals for my CB
rigs (three cars caravanning across country), an old grizzly ham jumped on
me as I looked at CB stuff. You blankety blank CBers blah blah -0 %*#@ - the
drill - blah blah. I answered him in Morse code as I was a radio op in the
US Navy -- my CW answer was not too polite (his buddies were howling with
laughter as they dragged him away).

This ought to stir up a hornets nest.

73 -- Mike Ro Farad (with a ham ticket - extra heavy) and KEV9505 CB license
(expired I guess (:-) grin)

>in the future. This is not going to go away.

Kim:

I think you're missing a basic point of radio regulation here.

The radio spectrum is a limited, shared resource, which is why we have
different services, licenses, etc. And of course there must be a balance
between the needs of various services, such as broadcasting vs. hams vs.
maritime users, etc.

But BPL isn't a *user* of the radio spectrum, just a *polluter*. And a basic
principle of regulation has been that polluters must not interfere with
licensed users. APP's comment turns that on its head, saying the licensed users
must not only accomodate the polluters, but that the burden of proof is on the
licensed users, not the polluters. HUH?

Imagine a river that is used for many purposes - transportation, recreation,
energy production, food production, etc. Different parts of the river are
reserved for different purposes and all benefit from the river. The different
users of the river all pay for licenses and support preservation and
intelligent use of the river.

Then along comes a company that wants to use the river as a dump for its
industrial waste, without paying any fees and without regard for other users of
the river, who are NOT allowed to dump anything into the river at all! The
company says they should be allowed to dump their waste into the river wherever
and whenever they want, and if the other river users don't like it, too bad.

On top of all this, other companies in the same business do not dump waste into
anybody's river. Instead, they invest heavily in new technology so that they
don't generate much waste in the first place, and also invest in treatment,

containment and disposal technology so that what little waste they do generate is handled safelyt. Those other companies are in direct competiton with the new company, but they don't get the exception the new company is asking for.

Some folks think BPL is only an HF problem, but the systems proposed go as high as 80 MHz, which includes 6 meters. And if there are any harmonics produced, watch out 2 meters and above.

>> Critical everyone submits a reply comment ASAP.

>I guess you're making the assumption that everyone who is a ham would be
>against this? Or, are you really being that generous where it's a "everyone
>should have their voice thing?"

Do you think BPL is a good thing, Kim?

>Good idea. Make everyone think uniformly...yeah, that's the ticket!

What is YOUR thinking on BPL, KIm?

>On the
>other hand, those who have no idea what BPL may be about, what impacts it
>has, etc., will be "following" something they have no idea about. Maybe BPL
>is a bad thing for ham radio, but maybe it's a good thing for us as a whole.

How could it be a good thing for us as a whole? Most of us have a choice of dialup, DSL or cable. Do we really need another choice, particularly one that pollutes the radio spectrum to a level much higher than the others?

Perhaps where you live DSL and cable are not available, or are expensive. : Access BPL won't solve your problem, because it is basically a short-range "last mile" technology, and the target markets are high density suburban areas, not rural.

>Do I want to accommodate ham radio, or the rest of my fellow citizens and
>what this may do for them? What alternatives would the commercial interests
>have to BPL technology, and how much would that cost us?

It's not just about ham radio, but about all users of the spectrum, and setting a precedent. And if it's somehow OK to trash 2-80 MHz, why not 80-500 MHz?

Do the people supporting BPL care what they do to the radio spectrum?

>Gosh, those are just a few questions people may encounter, and I am probably
>now going to be lambasted for thinking about the majority...LOL what a
>concept.

"The majority" already have access to DSL, cable modems, dialup, and a wide range of other systems. Will BPL be cheaper? More reliable? I don't see how. Show me.

btw, BPL will be just as vulnerable to disruption from physical damage as cable, dialup or DSL because the wires are on the same poles or in the same trenches. In fact it will be more vulnerable because the lines are not shielded.

>> Simple, the old-timers are not interested in new ideas.
>
>Your statement is not substantiated by fact.

It is a broad generalization, which, unless there is a logical influence, cannot support itself. However, I did not say 100% old-timer are not interested in new ideas, just that there is a tendency for that in Ham radio. Thats my, and other's, experience, so is not substantiated by fact.

>The first part of your statement is not "an example" at all. Morse code
>has demonstrated its usefulness and is still widely used in amateur
>radio. Someone might "hold on" to morse code and be very active with
>newer modes or might be involved in electronic circuit design.

In my local club newsletter. The club states that a new HF setup is keeping with the goal of advancement of the radio art. However, the do little else towards that effect, despite having alot of resourses which can be utilized for technical activities. Also, few club members are interested in homebrewing, despite claiming interest by posing for a photograph showing club members doing a group project. So, the "advancement of the radio art" is just a justification for more HF/CW activities.

>The second part of your statement, the one about pressuring new Hams to
>learn morse code is unsubstantiated by fact.

At various antenna setups, the other Hams try to persuade me to learn Morse code. This has happened several times.

>Some new hams don't want
>to learn morse code and don't.

>The third part of your statement, dealing with the exclusion of those
>who don't want to learn morse code, is unsubstantiated by fact.

The ones that do become popular with the other club members. The ones that don't want to learn Morse code become excluded.

>How do you know what "most old timers" do and what they are not
>interested in? I know old timers who are very technically inclined

All I can say is what I have found in my area and in several other states. There have been exceptions of course, but it is too rare to be worth the effort. I cannot search out the contradiction.

The newcomers seem to be of the same mode also. The ones that are interested in the technical stuff probably would have left within one or two meetings. Probably same would be true about the social aspect of newcomers. Thats why the demographics seem to stay as they are when new people join.

The other alternative is to start my own club. I tried it, but that was not too successful.

There is a pirate station operating from the U.S. East
Coast nightly on 6273 kHz. Excellent reception here
in Norfolk VA. Sounds like he has a political agenda.
Seems to have some hot inside information about the
FCC which he gets from a disgruntled FCC employee
who is unhappy with their present assignment.

>
Not at all!

The accomodations available in the code test are similar to accomodations available in the written test. For example, if someone has limited vision, the written might be printed in large plain easy-to-read text like 48 point Arial rather than 10 point Times New Roman. Blind people might take the test in Braille or aurally. People with limited mobility might use various devices to fill out the answer sheet, or verbalize their answers rather than writing them.

Because the written tests are not timed, a written test can take anywhere from a few minutes to hours.

It turned out to be a dutch station radio spaceman.

From the UK i now receive radio Galaxy (pirate) at 6.305 signal 7 - 9 on my
1.10 meters long aerial. Aearial performs
better then i thought it would do.

Not sure if a "code key/Oscillator" applies here, but if a person needs to
have special testing done, the rules I"ve seen written state that the
examinee is the one who must furnaish the equipment to the VEs in which to
use to accomidate that persons handicap. Perhaps the VEs didn't have one.
Not every one does.

My dad was at Eniwetok, and at several Nevada tests as well. He is
what is now called an "atomic veteran."

He has real military experience.

I can say this.. I HAVE seen some VEs who were real bastards. Not wanting to help anyone. But I've seen those too, who helped all as much as they could. However, my former comment still stands, according to the rules I've read, if an applicant is handicapped and requires special equipment to use in testing, it is THEIR responsibility to provide it for the VEs to use. It is NOT the VEs place to provide it. There is a comment though I'd like to make about the My way or the Highway when it comes to testing. It is "supposed" to be required of the VEs to afford the candidates the best possible conditions in which to examine. IF someone in the waiting or even an applicant his/herself starts making it miserable for the others OR even before hand if the applicant fails to provide all required documentation, the VEs have a right to evict them from the area. My comments weren't actually directed so much towards Dick's
desire to keep Morse testing (we could agree to disagree on that),
but rather on his *stated reasons* ... their fallacy, and their bad-
spiritedness.

>
> Without spectrum, there is no Amateur Radio.

On that we agree ... but without growth, the spectrum will be increasingly at risk as other uses keep demanding more access to spectrum.

A body of hams whose main goal seems to be to insult, bad-mouth, berate, and do every other thing they can to discourage as many people as possible from becoming hams does NOT help our cause.

All I know about him is the garbage that he posts to Usenet.

Anyone who responds with posts filled with gratuitous, fantasy
filled insults rather than discussion, is a jerk. On top of
that, it turns out he's a two faced dick.

He is a primary proponent here of retaining a code test solely
for the purpose of preventing people access to the ARS, claiming
that those it deters are all somehow less honorable and less
deserving that he is. Yet we see that he is void of honor and
deserves nothing.

He's also one of the most fun people to poke with a stick, just to
see what he can imagine next.

>

The continued existence of a CW test does actually threaten the future of the hobby, i.e. it is a 'deal killer' for recruitment. Unfortunately, a lot of damage has already been done, as it has been allowed to persist long past it's 'sell by' date.

Sure, 5 wpm is easy (higher speeds were not, but that's moot now). However, the CW test manages to be too slow to impart any genuinely useful level of CW ability, whilst at the same time putting off prospective hams. In other words, it's more counter-productive than useful.

Sure. there is a lot of CW use by hams on HF, but there are precious few prospective hams who want to use it. Put in all the written questions you like on CW, though, as that won't cause the same kind of problem.

I think it's true that those who want to keep a code test would likely have wanted to keep spark if they had been around back then. If they really could stop the wheel of progress, the hobby likely would die with their generation, but luckily that won't happen.

Keeping out all those who aren't interested in CW may keep a few 'breakers' out, but it keeps out most people, period. That may suit a few people here, but it isn't the way forward. Ultimately, keeping the code test would do far more to destroy the hobby than letting in a few CBers (and I do mean a few, as most of them are not smart enough to pass the written tests). If we keep a code test, the hobby will fail for lack of interest. Luckily, I don't expect that to happen.

Brian is a liar, a bs artist, and just a general troublemaker. No one said
a thing about destroying the ARS. I for one said I would fight against
those THAT WANT TO DESTROY THE ARS. Which obviously includes Brian the
braindead.

Yep, you would. It's not the least politically correct to deny anyone the
right to cause us all the trouble they want. We'vve seen a LOT of that
already. All you can focus on is the fact that a miniscule percentage of hams
who have passed a code test happen to be the few troublemakers on 3950 and
14313. So jus t weait untill all their cohorts who *couldn't* pass one show up

Carl, you just aren't too bright.

That would be YOU, pal. You've done that consistantly with no end in sight.
My opposition to allowing the neaderthals from north of 27 mhz free licensing
access to HF ham radio isn't off base at all. If it was you'd have some
rational
response instead of just another replay of your pre-canned bile saturated
rants.

The fact is there for all to see- the code test has for years been the ONLY
factor hindering those very induhvidiuals from HF ham radio access en masse.
With the code test gone, here they come!

> Gosh, those are just a few questions people may encounter, and I am probably
> now going to be lambasted for thinking about the majority.

No, I think you will be lambasted for not doing your homework and
understanding the issue.

"BPL" is an unlicensed service which proposes that it be allowed to
inject RF (radio signals) into the AC distribution grid. This RF will
extend across the MF/HF spectrum, and up into the lower VHF spectrum,
and the power lines will act not as a transmission line, but as an
antenna. The interference will potentially affect EVERY RADIO
COMMUNICATIONS SERVICE (not just hams) who use the affected spectrum.

In fact, BPL is a single unlicensed service which would presume to
pollute the spectrum used by the "majority" (your word, not mine) of all
long distance radio communications services.

Kim, you seem to be a person concerned with social issues. That's a
great quality. Go to your local library and research the term "tragedy
of the commons".

Good luck on this one now.

With all kind wishes,

de Hans, K0HB

That includes Homeland defense, defense, broadcasting, lots of people
besides hams.

> In fact, BPL is a single unlicensed service which would presume to
> pollute the spectrum used by the "majority" (your word, not mine) of all

BPL seems like one of those diminished performance systems that have
been foisted on the public more and more. If a person is tempted to
disagree, I'd ask how many of us would accept the performance on our
home telephones that we accept on cellular- "can you hear me now?"

People seem to forget that the power lines make a recieving antenna as
well as a transmitting antenna. My suspicion is that with the error
checking that will have to take place a lot on any BPL system, we will
be lucky to get to 56K modem speeds.

Anyone care to take bets on how BPL performs to say cable modems? DSL?

masse.
> With the code test gone, here they come!
>

The sky is falling! The sky is falling! (sayeth Dick ...)

That's my point ... every change in the history of ham radio
has had folks like Dick ranting and raving that "This will be
the end of ham radio!"

(Not!)

What WILL be the end of ham radio is a lack of significant
growth ... as Alun has said, the Morse test is a "no sell" for
many folks who would otherwise make fine hams.

The "hordes of CBers" argument doesn't hold water ...
if they're "freebanding" (illegally and without licenses)
around 27 MHz, why would any rational person think
the lack of a license would keep them from the ham
bands TODAY (if they wanted to be here) ...

The doom and gloom, end of the world scenario that Dick
keeps trying to peddle smells of sour grapes ...

John:

Yep, it is true! I was once a CB'er, for a whole six months! I was the
Asst. Mgr. of the Radio Shack store in Depew, NY at the time, and I gave
myself a 30% discount on a Realistic TRC-23 CB transceiver -- the top-of-
the-line AM CB rig at the time in the era just before 40 channels. I
installed it in my 1972 Dodge Colt with a 102" whip antenna, and actually
got a lot of use out of it when travelling between the area R/S stores on
stock transfer missions and going to/from the repair shop in Buffalo.
When I quit the job at Radio Shack and joined the Air Force, that was
the end of my brilliant career as a CB'er!

>> Dan, Bruce...

Hmmm. Curious. I don't recall who originally posted this, but I would
certainly be interested in seeing a quote where I said that I intended to
"destroy the amateur radio service" once code testing had been abolished.
To be sure, it would hardly be necessary for me to lift a finger to "destroy
the ARS" since our so-called "newcomers" will be doing their level best
to accomplish that on their own!

> Well, I don't intend to. Heck, I'll probably do lot's of "self
policing".

Any attempts at "self policing" will, for the most part, be wasted breath,
once all the eager new HF phone operators are finally liberated from 11 meters
and join their "fellow amateurs" on our HF phone bands. About the only
thing that could possibly work would be some sort of "super Elmering" at
the local club levels -- meaning, put the Codeless General/Extra-class
"newcomers" on a very short leash, and keeping them on it more or less
permanently. However, since I believe that 99.999999999018 percent of
the problems in amateur radio originate on the phone bands, we'd be asking
the inmates to guard the jailhouse.

Looking at it from the bright side, the antics of the present and future
phone operators may be the best "incentive" yet for people to learn the
Morse code! However, as usual, they'll probably just give up entirely,
rather than make the effort to learn a useful communications skill. After
all, the code went away because of laziness.

I 'think' I understand what you are saying, I am 58, by way of
slight arm twisting' my wife and daughter got there tech tickets, just
a little while after I got mine,,,,,,,,,,,,,,,,,,,,,,,,,,,, my
daughter is 24, and when I reminded her she would need to 'reup' at
the end of the year,,, she was only mildly concerned,,, she is working
full time, and married,,,, busy, just like you were talking about....
sooooo what is the difference NOW, as related to 'way back when',,,,
ham radio ,THEN,,, was not COMPETING with the internet, nor was it
in a life and death struggle with """"Big Business""""", this IS a
democratic , Capitalistic country ,,,,,,,,, if the ''settlers crossing
the Great Plains "circled the wagons",,, maybe Hams should take on
a defense posture,,,, and what do "they" always say,,, the best
defense is an offence. I think that is all I am trying to say.
As far as '''travel expense'' I was talking ALSO about the local
hamfest, San Antonio Tx, within thirty miles of the city there are
three 'small town hamfest', at least three times a year.,,,, and again
I repeat most of the attendees are old,,,, like myself ,,, retired.
Like I said I don't advocate a 11 meters ''mess'', I am not sure, but
what do you think? Do you believe the 11 meter members/users
would want to join a ''''structured organization'. I for one don't
see it,,,, I think part of "their enjoyment is the fact they can '''be
out of bounds'''. I don't know just my thought.
Maybe I am not "seeing IT all",,,, but the percentage of 'young
people' in OUR midst is,,,,,,,,,,,,,, ??how much 4 or 5%??? I have not
made a search,,, I am only going by what I see. just some thoughts.

Whether I think it's a good thing or not wasn't the point of my comments.
The point was that I wonder if a "blanket invitation" for comments would
extend to those who may think it is a good idea.

> >
> >Good idea. Make everyone think uniformly...yeah, that's the ticket!
>
> What is YOUR thinking on BPL, KIm?
>

Well, I don't think I have a position on it, Jim. So, I would personally
refrain from commenting. I would not automatically think it was a bad idea
just because I am a ham radio operator, though. My point with the comments
was that uniformity can sometimes be seen as ignorance--and the FCC is
probably in a position to determine if they are getting canned messages or
not. It always a good idea, if one is participating in a mass effort to at
least come up with something truly original--even better to come up with
something that directly impacts them.

As you are, so is Carl in my age group. Carl sat on a Tech ticket for
2 1/2 decades until the requirements were lowered. Carl crowed about
the large numbers of highly technical people being kept out of ham radio
by "high speed" morse tests. Extra Class Carl spends his time chasing
DX on HF SSB with a commercial rig. Carl is as cranky as anyone here.
He's just cranky with a view opposite mine. I offer his sermon as
proof.

Why no, Kim. Then again, I didn't write anything like that. Perhaps you
just had a feeling...

I'm sure you mean what you've written even if it isn't borne out by
fact.

> Perhaps you like your terms,
> better. It's always interesting to note how you quickly change to

Did you bother to read what Carl wrote about me?

> Is this another chapter in your book?

No chapter in my book is devoted to Carl. If you'd like a copy, I can
sell you one at a pre-publication discount.

> Go to your library and get a
> book on communication--somewhere in there you'll see part where it says that

"Adjusted" is so cute and newspeak. We're still using the older
technology in question, you might recall.

> The standards have not been lowered at all.

So the requirements have been lowered but the standards haven't?

> > >

> >
>
> In your stumbling around, above, your forgot to leave a point.

Not at all, Kim. You just neglected to digest it. Most new hams aren't
new people. They aren't young. Many are quite old. A great many "old
timers" have decades left in them. They aren't going away. They are
not only the past, but the present of amateur radio.

> >
> > > It's up to us to WELCOME and ENCOURAGE

message you may not be meaning to send.

I wrote that standards were lowered because that is, in fact what took
place (again). I did not place blame on newcomers. They didn't lower
the standard. I did not place a qualifier on the welcoming of
newcomers. Do you ever read the words I've written before replying to

them?

> > >
> > > But insulting, berating, demeaning them, and trying

>
> Your messages come across as attempts to insult, berate, and demean, Dave.

Good. I intended to insult, berate and demean Carl. I wrote no such
thing about newcomers. You didn't read what I wrote or you could not
have come to such a conclusion.

> You are very political in your approach with people here.

No kidding. Clue us in as to what you do here.

> If someone does
> not act and think just as you, you assert superiority.

What are you attempting to achieve in writing the sentence above? Are
you attempting to assert superiority?

> > > Think about these things long and hard before you look yourself in

> >
> > Quit rattling your chains and moaning.

> You are quite dislikable, whether you realize it or not.

I'm sure that it appears that way to someone like you, Kim. In your
view, Carl can tell others to engage in reflection and tell them to
change their ways. If similar words are directed to Carl, you find the
person "dislikable". Go hug a tree, Kim. Take a whale to lunch.

> And you do seem to approach life from the comfort zone...

...whatever that means.

Do you mean "oral"? "Verbal" includes both "written" and "oral".
The opposite of "verbal" is "graphic".

We get that trick question in the first hour, first day of Law
School Contracts I regarding what's not worth the paper it's not
written on (which is not true - except in specific instances where
the law requires that a contract be in writing, an oral contract can
be as enforceable as a written contract).

The days when the monitoring stations would catch ham operators 2
or 3 kHz outside the band edge (especially in contests) are gone
forever. "Cruising" is no longer a daily activity.

It certainly is broad and it certainly doesn't support itself.

> However, I did not say 100% old-timer are not interested

Actually, that is not what you said at all. What you said is:
"Simple, the old-timers are not interested in new ideas."

> Thats my,
> and other's, experience, so is not substantiated by fact.

No "other's" have confirmed your claim.

They're probably doing all that when you aren't around.

> Also, few club members are interested in homebrewing,
> despite claiming interest by posing for a photograph showing club > members doing a group project.

>
> All I can say is what I have found in my area and in several other states.

I'll wager that most "old timers" aren't even involved with a radio
club. You'll have to use the callsign database and begin making phone
calls or knocking on doors to come up with a scientific sampling, Vipul.
I'd like to be able to feel sorry for you but my experience tells me
that you don't really have a handle on reality.

> There have been exceptions of course, but it is too rare to be worth > the effort. I cannot search out the contradiction.

That's right. You've begun with an outcome and you're trying to make
the statistics fit that outcome. Good luck.

Oh *that* won't end ham radio, just make it unrecognizable. Maybe to the point where FCC or other authority would strongly consider action to seriously curtail the service.When enough hams cease to behave well enough you can be sure closer scrutiny will result. The enforcement problems today represent a quite small percentage of hams, but it won't take much of a raise in that percentage for the ship to go aground. Believe it, it didn't originate with me. If you've missed
authorities remarks to that effect, shame on you.

>
> (Not!)
>
> What WILL be the end of ham radio is a lack of significant
> growth ..

BS, Pal. There are now six times the number of US hams that existed when I was first licensed, and the US population has NOT grown anywhere that much.

When commercials want our spectrum badly enough they'll get some of it, as they have in the past. Of course yoiu already know that. Maybe you're not sharp enough to know that the more troublemakers and scofflaws we accrue the more likely we're to be viewed as no longer willing and able to self-police the ARS.

Without the vast majority of hams keeping themselves in line the ARS *WILL*
cease to exist, or don't you pay attention to Riley and other authorities?

> . as Alun has said, the Morse test is a "no sell" for
> many folks who would otherwise make fine hams.
>

Unhuh, we've heard that for decades and still no beef. Any individual too
hung up
on himself to bother to learn a measly 5wpm VERY basic morse code is simply
too mildly interested for it to matter what the requirements are. He's just
not interested *enough*. If he was, the code would be no barrier at all, as
proven many thousands of times over. Barrier Schmarrier! It's your Agenda
strawman!

>
> The "hordes of CBers" argument doesn't hold water ...

>

You really uninformed, aren't you? Yyou been too busy rachetjawing on 20
meter SSB to notice what's going on on 10 meters? Read the latest enforcement
logs.
That's where they talk to* each other*. They don't need to, they have all
that mostly uninhabited spectrum between CB and 28 mhz but instead they land
in the 10 meter band by CHOICE. Wonder why they do that? Couldn't be for the
very reason I've stated-that they just want to cause trouble for, and thumb
their noses at hams, could it? Why shouldn't they get easy ham radio licenses
and REALLY do it right?

It's not surprising you missed out on the reported cases where numbers of
those very people have been overheard discussing what they intend to do after
they get their no-code licenses and get on HF. If a few are heard making such
plans, you can be sure many plan it that don't talk about it overtly.

>
> The doom and gloom, end of the world scenario that Dick
> keeps trying to peddle smells of sour grapes ...
>

You can sanitize it any way you want, but the situation smells and it isn't
going away with the end of code testing, to the contrary, It'll only get
worse.

Your tales always end with you being the odd man out.

> The ones that are interested in
> the technical stuff probably would have left within one or two meetings.

Your job is to seek them out and meld a new club based around your
unique definition of what an amateur radio club should be.

> Probably same would be true about the social aspect of newcomers. Thats why the
> demographics seem to stay as they are when new people join.

So the club stays full of those who are interested in talking about
amateur radio and who set up operating events and then waste that time
by actually operating rather than touring the beach, eating salads and
chatting up the "preety fems".

I'm involved in a county group which is part of ARES. Most of the hams
involved are not interested in contesting or DXing. Many operate VHF FM
only. I don't know any who've designed and built a linear amplifier.
Only one other is interested in collecting and restoring vintage gear.
I continue to attend. We interact based on our common interests rather
than the things which divide us.

It was not sarcasm. It was a very *intentional* experiment in
social engineering on the net, and it was clearly very
successful too!

And yes, it is now a "holy writ", and probably the 2nd most
famous one. The most famous being "Thou shalt not top post".

Well-written comments, Kim. So well written, there is nothing else to add. So I'll wait to see how the responses fall. And thanks for posting Kim's message, Mike.

I think she's blood, one of Robert K's daughters, niece of the
President of the Chapaquiddick Diving Team.

Actually she is the daughter of Eunice Kennedy Shriver and
Sargent Shriver. That makes her the niece of former President
of the United States John F. Kennedy.

Incidentally, if anyone has any doubt about Arnold having some
smarts, a quick review of his choice of mates should indicate
he's no dummy.

The claimed nix mentioned above regarding the BS seems like
clear proof of it too. Sharp lady...

January 3, 2011. That's a bit like asking someone when their driver's licence expires. The two renewal processes are much the same, except that Immigration don't test my eyesight!

This debate extends to much more than just the US, anyway.

Since the FCC closed all their monitoring stations seven
years ago, the number of pirates and unlicensed activity
on HF has jumped by quantum leaps. We are observing
pirates in the 6600 khz range, which is reserved for
aero ops, something which was unheard of in the days of
active FCC enforcement.

HAW! My bad!

Perfect example of why legal stuff is written the way it is, rather than in 'plain English regular people can understand'. Of course the fact that 'regular people' can understand the same 'plain English' sentence several different conflicting ways is conveniently forgotten.

Point is, there are plenty of accomodations possible for both the written and code tests.

--

Phil has probably seen this many times, but for the rest of us:

From the book "Disorder in the Court":

Last one is the corker

73 de Jim, N2EY

Q: What is your date of birth?
A: July fifteenth.
Q: What year?
A: Every year

Q: What gear were you in at moment of the impact?

A: Gucci sweats and Reeboks.

Q: This myasthenia gravis, does it affect your memory at all?
A: Yes.
Q: And in what ways does it affect your memory?
A: I forget.
Q: You forget. Can you give us an example of something you've forgotten?

Q: How old is your son, the one living with you.
A: Thirty-eight or thirty-five, I can't remember which.
Q: How long has he lived with you?
A: Forty-five years.

Q: What was the first thing your husband said to you when he woke up that morning?
A: He said, "Where am I, Cathy?"
Q: And why did that upset you?
A: My name is Susan.

Q: And where was the location of the accident?
A: Approximately milepost 499.
Q: And where is milepost 499?
A: Probably between milepost 498 and 500.

Q: Sir, what is your IQ?
A: Well, I can see pretty well, I think.

Q: Did you blow your horn or anything?
A: After the accident?
Q: Before the accident.
A: Sure, I played for 10 years. I even went to school for it.

Q: Trooper, when you -stopped the defendant, were your red and blue lights flashing?
A: Yes.
Q: Did the defendant say anything when she got out of her car?
A: Yes, sir.
Q: What did she say?
A: "What disco am I at?"

Q: Now doctor, isn't it true that when a person dies in his sleep, he doesn't know about it until the next morning?

Q: The youngest son, the 20-year old, how old is he?

Q: Were you present when your picture was taken?

Q: So the date of conception of (the baby) was August 8th?
A: Yes.
Q: And what were you doing at that time?

Q: She had three children, right?
A: Yes.
Q: How many were boys?
A: None.
Q: Were there any girls?

Q: You say the stairs went down to the basement?
A: Yes.
Q: And these stairs, did they go up also?

Q: How was your first marriage terminated?
A: By death.
Q: And by whose death was it terminated?

Q: Can you describe the individual?
A: He was about medium height and had a beard.
Q: Was this a male or a female?

Q: Is your appearance here this morning pursuant to a deposition notice that I sent to your attorney?
A: No, this is how I dress when I go to work.

Q: Doctor, how many autopsies have you performed on dead people?
A: All my autopsies are performed on dead people.

Q: All your responses must be oral, OK?
What school did you go to?
A: Oral.

And that is the most naive statement about the workings of government that I
have ever seen.

I believe that you have to have a properly licensed control operator, at a control point, for any transmission made on amateur radio except in the case of emergency. Emergency is further defined as threat to life and property.

I have, on various boy scout camporees, place a two meter, rock controlled radio, set on 52, in the disaster sight. The boys were on there own, but there was always someone with a stronger radio, close at hand, to monitor, w/o the boys realizing it. Never had a problem, and did some sole searching about definition of control point. Decided that the stretch, if any was worth it, and I was willing to defend my decision if necessary.

Then, why the opening remarks then and now, with this post, about how long
Carl was a Tech and his alledged comments on CW? Why enter that into your
remarks at all, Dave, if not to cast attention to that? If you are casting
attention to that, then why?

>

Then, changed if you like that better. Dave, the "requirements" for living have changed since the pioneer days. Things change constantly, if they intend to keep up. The requirements for ham radio have changed here in the United States and now, indeed, the world. What about that is so difficult for you to grasp.

I note your folding my remarks up into your neat little package of, "if one does argues against CW testing in any way, they must certainly be against the use of CW." Use your claimed intelligence. Find a damned post where I have ever said anything against its use. I am only and simply against it being a testing element.

>
> > The standards have not been lowered at all.
>
> So the requirements have been lowered but the standards haven't?
>

No, Dave. We all still have to abide by the same R&R as we always have. Those standards have not been lowered at all. What standards do you do ham radio by? You cannot be using your book for that, because someone else definitely supercedes you on that.

Dave Heil said:

Dick, you ASSume that a large percentage of new hams will "behave
badly," solely on the basis that Morse testing will no longer be required.

As I said before, if the (unlicensed) law-breakers aroung 27 MHz
really WANTED to be amongst us, they'd be here now ... lack of
a license doesn't stop them at 27 MHz ... why would it stop them here?

The problem I have with you is that your views and rhetoric are so
steeped in disdain for anyone who doesn't share your views WRT
keeping code testing that you are out of touch with reality.

> > The "hordes of CBers" argument doesn't hold water ...

We're talking about some truckers looking for a clear, "private" channel ...

Since a lot of 10m is essentially an unoccupied wasteland (and I do operate
on 10m ...), with virtually all the activity concentrated in the 28.3-28.5
segment (except for the minority of folks who deliberately want to shun
the Tech+ and Novice ops), wouldn't it be better to OCCUPY that spectrum
by allowing Novice/Tech/Tech+ access there?
(remember the "use it of lose it" saying ...)

> It's not surprising you missed out on the reported cases where numbers of
> those very people have been overheard discussing what they intend to do
after
> they get their no-code licenses and get on HF. If a few are heard making
such
> plans, you can be sure many plan it that don't talk about it overtly.

While this anecdotal "evidence" has not been documented/proved AFAIK,
you can also be pretty sure that, if such conversations HAVE actually taken
place, there's a big "hot air" factor ... look at how such folks bluster and
posture here (and I expect also in the CB groups ... though I don't monitor
those ...)

> > The doom and gloom, end of the world scenario that Dick
> > keeps trying to peddle smells of sour grapes ...
> >
> You can sanitize it any way you want, but the situation smells and it
isn't

> going away with the end of code testing, to the contrary, It'll only get

Forever the "Things are going to change somewhat and that will be the end
of civilization." FUD ...

Sorry Dick, it just doesn't hold water, based on all of the historical
evidence
of the same sort of dire predictions in every case of change in the past,
and
the fact that NONE of them panned out.

Learn from history, or be doomed to repeat it ...

Thank you, Dwight. There will be none, save yours. The naysayers totally
ignore poignant statements and seem to like more, getting involved with the
idiocy...

For example:
Dave Heil still hasn't told me if he has ever, in any way, broken the law.
Dick Carroll still has not described the items he would need to set up a CW
station in a disaster situation.

Wait a minute ... don't tar all of us Extras with the same brush that Dick, Larry, et al deserve ...

For example the vast majority of the Directors of NCI are Extras (or their national equivalent thereof).

Additionally, there are a significant number of Extras amongst our membership ... at least in proportion to the % of Extras to other license classes.

So, it's not "the Extras" ... it's the PCTAs ...

Please don't lump all Extras in with that crowd ... it just 'aint so.

In my ARES group of qty 40 hams, one is a college age teen, no one in age group 20's or 30's, about 15 in their 40's, 2 age 80, 5 in their 70's, the rest in their 50's and 60's. The older ones are always willing to elmer the younger ones. We all learn from each other. One 80 year old gentleman, a former WWII fighter plane mechanic, is the most dedicated guy I have, always available and willing to work to the best of his ability.

Leo and I kicked this around in private e-mail, and because of lots
of facts that you don't know, the use of amateur radio for this
project is NOT proper.

Gotta' know the whole story before you dispense quasi-legal
advice.....especially when said advice is incorrect.

> AMEN. That oughta cork it.

I *certainly* hope so!

Hams are supposed to share good advice and learn from "Elmers."

Phil Kane is clearly in a position to provide a VERY authoratative
"read" on this issue.
I make my living doing radio regulatory for my company, for standards
bodies, etc. While I am not, as is Phil, a lawyer, I *am* well-versed
in this field and how regulatory language should be read ... it's not
"plain English" ... and it varies somewhat between FCC, ITU, etc.

While I certainly want to see the last vestiges of Morse testing eliminated,
I do *not* want to see a bunch of people misinformed and then have them
go out and unwittingly commit violations that could put their licenses at
risk, subject them to heavy fines, and give all of ham radio a bad name.

BOTTOM LINE: *Until the FCC changes its rules* no-code Techs
have NO HF privs ... sorry, folks, but that's the way it is.

>
>Sure. there is a lot of CW use by hams on HF, but there are precious few
>prospective hams who want to use it.

How do you know they don't want to use it? At the past several Field Days, the
CW ops generated the most interest.

>Put in all the written questions you
>like on CW, though, as that won't cause the same kind of problem.
>
>I think it's true that those who want to keep a code test would likely
>have wanted to keep spark if they had been around back then.

Different thing entirely. Spark for hams wasn't outlawed in the USA until 1927
- long after hams had stopped using it. By choice.

>If they
>really could stop the wheel of progress, the hobby likely would die with
>their generation, but luckily that won't happen.

Do you want code USE by hams to continue or not, Alun?
>
>Keeping out all those who aren't interested in CW may keep a few
>'breakers' out, but it keeps out most people, period. That may suit a few
>people here, but it isn't the way forward. Ultimately, keeping the code
>test would do far more to destroy the hobby than letting in a few CBers

>(and I do mean a few, as most of them are not smart enough to pass the
>written tests). If we keep a code test, the hobby will fail for lack of
>interest. Luckily, I don't expect that to happen.

OK, let's look at some facts:

- Growth in the ARS in the USA from 1980 to 1990 (when there were no waivers and all hams had to pass at least 5 wpm) was almost exactly the same as from 1990 to 2000 (when both waivers and codetestless licenses were available)

- Overall, the ARS in the USA has kept on growing for the past 35 years. In fact, since the end of WW1, the only periods of non-growth were WW2 and most of the 1960s.

And now a challenge to all this stuff about disincentives. Soon the code test will probably be gone. There will probably be a surge of new licenses and upgrades, then back to growth rates near to what they were before. If we don't see more long-term growth without code tests, will you admit you were wrong and help get code tests reinstated?

In article <3F2C0443.9060301@adelphia.net>, Mike Coslo <mcoslo@adelphia.net>
writes:

>> Put it that way, Mike, yes. It is hard to argue that removing *any* part
>> of
>> a test is not a reduction in the amount of knowledge needed to pass a test.
>> But, that is simply a word game and nothing else.

It's more than a word game. Encouraging radio knowledge of all types is one of
the most basic reasons to have the ARS exist at all. The tests are there to
insure a minimum knowledge level. ("Knowledge" including skills, concepts,
facts, etc.)
>>
>> The point is, what does passing a CW test prove in the way of
>> knowledge--other than that one can pass a CW test?

It proves that:

1) The person has learned a useful radio skill at a very basic level.
2) The person was willing and able to devote the time and effort necessary to
learn that skill.
3) The person has been exposed to a useful, widely-used-by-hams radio
communications mode other than voice or data.

>>What does passing the
>> written tests prove in the way of knowledge--other than that one can pass a
>> written test?

It proves that:

1) The person has learned some useful radio knowledge at a very basic level.
2) The person was willing and able to devote the time and effort necessary to
learn that knowledge.
3) The person has been exposed to several aspects of the amateur radio service
(regulations, operating practices, technology).

>> If you see the parody in both of those questions, then I go
>> one step further and say: What does passing a CW test have to with anything
>> related to overall knowledge of ham radio?!!!!!???? In my mind, *NOTHING*

Then your knowledge of amateur radio is very lacking. Like it or not, CW/Morse
is a very big part of amateur radio today. Of course, that by itself doesn't
prove we must have a code test.

>> It's bad enough that the written tests don't prove a whole lot, without the
>> added argument of CW in the mix. To continue to support CW as some form >>
of

>> proof that people know more about ham radio, know more about >>
communication,
>> know more about the standards and technology of ham radio, et al, is to
>> continue to do nothing but whine about a tradition--which is really all CW
>> really is: A TRADITION that no one wants to see fade away.

You are mistaken on several counts there, Kim.

1) The written tests are what they are. They are in a continuing state of development.

2) ALL ELSE BEING EQUAL, a ham who has Morse skills knows more about amateur radio than one with no Morse skills.

3) Morse/CW has certain advantages to hams beyond being "just another mode".
4) Morse/CW is more than "just a tradition". It's a useful mode of radio communication enjoyed by hundreds of thousands of hams.

5) There do exist folks who want Morse/CW USE (not just the TEST) by hams to simply go away. They are a very small minority, but they do exist. Or at least there are people whose rhetoric indicates they want Morse use by hams to end.

Of course, whether all of that "proves" we must have a code test is simply a matter of opinion.

>> Passing CW is nothing.

Maybe not to you. To others, it's a big deal.

>> And it proves nothing to anyone else, except that
>> they studied CW and passed it in a test. I've seen idiots on every side of
>> ham radio, so it does nothing to prove quality or *interest* as everyone
>> seems to like to argue. If CW was that kind of instrument, then we'd have
>> no jerks on ham radio and, believe me, I've heard them.

That's simply illogical. No test, no matter how contrived, will filter out every single "jerk" from the ranks of amateur radio. Or anything else, for that matter.

Look at how much it takes just to become a physician. The training and testing required is phenomenal, and designed to weed out the incapable. The hard work and dedication required just to get into medical school are extraordinary, and yet that's just the beginning. I could go on and on, but you get the picture.

And yet there are some physicians who are jerks, pure and simple. Not many, but some. And they make life hell for the rest, through things like high malpractice insurance premiums and over-regulation.
>>
>> Using CW as a test to prove "diligence" to the desire of wanting to be a
>>ham
>> radio operator is pure crap in my not-so-humble opinion.

OK, fine. At least you note that it's your opinion.

>> It is wrong to
>> even attempt to measure someone's desire and interest.

Why? I'd rather have an ARS consisting of a few hundred thousand interested, active, dedicated, skilled, knowledgeable hams than one of a few million inactive, apathetic, unskilled, ignorant ones who could not care less. Code test or no code test.

>> If I have an Extra
>> license and I have no equipment or haven't even been on the radio in years,
>> then what did passing CW prove, in terms of proven interest? Nothing. And
>> it never will.

Incorrect. It proved that at one time the person had the interest.

>> Yes, CW is a useful communication skill. Hell, *ANY* type of communication
>> skill is useful. If we place such importance on CW, then why not RTTY,
>> phone, ATV, etc.

Because those modes don't require the acquisition of new skills for their use.

>> You know what I'm saying.

Not really.

>> And, if CW proves a higher
>> plane of dedication and knowledge, then why are there extremely skilled CW
>> operators out there, who are real jerks?! And you know there are.

No, I don't. Name some. If your only reference is how a few folks behave in this newsgroup, it should be remembered that lots of folks on both sides of the code test fence have behaved like real jerks in their posts here.

>> So, how
>> can someone, *anyone* then turn around and say that CW proves *anything*?
>> It proves nothing but that the person studied for and passed the CW
>> requirement.

Seems to me that you want the Morse code test to be a perfect "jerk" filter. And of course no test can do that.

But note this plain, simple fact: Almost all of the FCC enforcement actions for "jerk-like" on-air behavior (obscenity, jamming, failure to ID, exceeeding license privileges, etc., etc.) are against hams using PHONE modes, not CW/Morse or data modes. ALL of us have taken written tests detailing what we should and should not do on the air, but it seems like violations are much more prevalent among the talkers than the brasspounders or keyboarders. Why?

percentages of troublemakers today is small, bjut it wouldn't have to grow that
much to put our bands in real jeopardy. So today we have a few frequencies
inhabited by that small percentage of (gasp) codetested hams causing us a black

eye. So how much of an increase in their ranks would it take to place a
"3950" at each and every 10 kHz point across 75 and 20 meter SSB (note that you
don't EVER hear of any such nonsense on the digital segments).

Actually it wouldn't requore that many more If ther are as many as a dozen on
each "3950", a couple thousand would do it, hands down.
There's sure to be lot more than that show up for the handout license-once that
dastardly Morris code is out of the picture..

. And HISTORY, which you attempt to quote but characteristically alter to fit
your Agenda, says there WILL be
a significant percentage of those very troublemakers scarf up essentially free
and for sure easy ham radio licenses once the code test disappears. End of
story.

Yep, thats's ONE case. You really believe there aren't many others out there?

>
> Since a lot of 10m is essentially an unoccupied wasteland

Yep, just like the space between 27 mhz CB band and 28 mhz. So why do they need to jump up into our ten meter band then if not to cause us trouble and agitate? Answer is "they don't", they just choose to do so. "Aw, those nasty hams aren't using it so we might as well, who cares about them anyway? Just wait till that dastardly Morris code test is gone, then WE"LL be there legally, too"!

> wouldn't it be better to OCCUPY that spectrum

Surely you haven't interpreted my remarks to read that I oppose any such use of 10 meters. Stop insisting that your Agenda do the interpretation of others writing, please. Let what's written stand for itself.

Ah, so we should just wait till the actually DO it all, then ask FCC to run them off. Sorry, it won't happen, never has. Once they're here, they're here WITH LEGAL LICENSES to stay, to our longterm detriment, as you well know. "One step closer to extinction".....

So you equate all of history with the vast drop in licensing requirements
brought on by NCI and others far more interested in getting the code test gone
and
the license numbers up, to a few mode changes and other far more minor
changes in the past. How so very convenient for your Agenda!

>
> Learn from history, or be doomed to repeat it ...

Good advice. You should TAKE it.

"Would be?" "Would have?" What's going on here? I thought you were relating actual experiences, not hypothetical situations. If you aren't speaking from a standpoint of actual situations you've observed at your local club meetings, then you may want to just leave out the speculation, since it only damages your already non-existent credibility.

I am not a demographer. I don't track newcomers like that. On that statement,
I'm just theorizing. That's why I used the word "probably".

>>Probably same would be true about the social aspect of newcomers. Thats why
>>the demographics seem to stay as they are when new people join.

I am not a demographer. I don't track newcomers like that. On that statement,
I'm just theorizing. That's why I used the word "probably".

Its 95%+ males, mostly older males. The idea of putting up antennas and
contesting for hours is boring. Not surprisingly, there are few females in the
hobby.

Most of the young people are of the anti-social nerdy type that others would
not like to be with. Therefore, other young people don't join.

>>The other alternative is to start my own club. I tried it, but that was not
>>too successful.
>
>Not "too" successful?

Two other people showed up. One person was a typical Ham type and believed that
I could get more members by appealing to current Hams. If I could find current
Hams with those interests, I would not have to start this type of club.

The other person, although not an EE, was sincerely interested in technical
projects.

Due to certain factors such as the lack of a meeting place, getting enough
members, and lack of funds, and other factors, the club could not get started.

I've often thought we really need to get more people in their 40s or so into the hobby and resurrect the interest of current hams in their 40s. Why? Well people in their 40s are established and have many productive years ahead of them. They are the ones who have the time and money to be significant participants in elmering, recruiting, operating, political involvement, etc. Yes we will also need young people but their participation is, of necessity, limited by the fact that they are just getting started in life and thus don't have as much discretionary time and money since they must focus on starting their careers and families.

And as the comment above shows, hams of any age are an asset to the hobby if they choose to be.

>doing a group project.
>
>Well, they do have photographic proof. We're stuck with just your
>claim.

No, they only posed for the photograph. It does not mean that they actually did that activity. I can ask people in that photograph if they are interested in homebrewing and that person will say he is not interested in homebrewing.

Therefore, the photograph is just hype and does not represent what the club is really interested in.

>> So, the "advancement of the radio art" is just a justification
>> for more HF/CW activities.
>
>So you're back to telling them where their interests should lie.

I didn't say they were interested in homebrewing - the photograph did. It takes a prominant place in the club publicity. Except, the photograph is a mis-representation of what the club members are truly interested in.

>I'll wager that most "old timers" aren't even involved with a radio
>club.

They don't go to club meetings. And they don't go to Hamfests. Nor are they on 2m. I get it - they don't exist.

>You'll have to use the callsign database and begin making phone
>calls or knocking on doors to come up with a scientific sampling

A scientific sampling is not needed by me, nor any potential new recruit to Ham radio. If that person's experiences are of anti-social, mostly male, mostly older, non-technical (if they are interested in that), Hams, then thats all they need to know. It won't do much good to show them the other aspect that "could" exist, but does not exist for them.

>> There have been exceptions of course, but it is too rare to be worth > the
>effort. I cannot search out the contradiction.
>
>That's right. You've begun with an outcome and you're trying to make
>the statistics fit that outcome.

I'm not making any statistics fit. I'm saying that if something is 95%* and it takes you a certain amount of time to come across the other 5%, then its not

worth the effort.

---

*The 95% number is given for example purposes only. It is not meant to represent a specific percentage.

And it is aggravated by the fact that you can find 10m ham radios in truck stops next to the CBs. Although labeled as requiring a license, that is totally ignored.

> Since a lot of 10m is essentially an unoccupied wasteland (and I do
operate
> on 10m ...), with virtually all the activity concentrated in the 28.3-28.5

> by allowing Novice/Tech/Tech+ access there?
> (remember the "use it of lose it" saying ...)
>

The 10-10 club was formed to help keep the 10 meter band active. Unfortunately, the propagation is so dependent on the sunspot cycle that for 2/3s of the cycle (roughly 7 years out of every 11) that the 10 meter band is generally only good for local communications except for occasional openings caused by sporadic E. No matter how many people we allow on 10 meters, there's going to be a lot of dead air except during the peaks of the sunspot cycle. Just check the beacon stations and you'll realize that for yourself.

For whatever reason, I have found that not many Novice/Tech+/Tech with HF privileges are taking advantage of 10 meters. If all those licensed for it used it, I'd certainly be hearing something as I'm in a major metropolitan area. Yet it's quiet. I suspect that those interested in HF have already upgraded to General and the rest aren't on the air because they fall in the class of inactive hams.

Inactivity of existing hams is more of a problem than any test requirements, etc. If every US ham already licensed for HF made one QSO per day, it would be wall to wall signals.

Jim I sure wish that was all there was to it. Instead we have all the questions with the exact answers, and many methods to do practice tests so as to condition your memory until you can remember enough of those answers and their paired questions, until you just can't miss! No knowledge required!

Neat! If one was to set out to dumb down a technical organization, how better to go about it than to devise such a scheme?

>
>We should have known ... "Radio Shack, you've got questions, we're
>clueless," I'm sure Larry fit in quite well.

Carl:

Actually, I did fit into Radio Shack very well. I had a great time working
there,
was actually able to meet my sales quotas and make some real money, and
I had a lot of customers who would come into the store and ask for me by
name since I had a reputation for knowing what I was talking about and I was
willing to provide some actual customer service beyond taking money and
handing out receipts. I helped many customers with auto stereo and CB
installations, I did minor repairs in-store, and I'd drive all over Buffalo
doing
stock transfers in order to get customers things that my store didn't have
on hand at the time. I would have ultimately been a store manager if I had
not joined the Air Force at the urging of my best friend Fran, N2HMG.

Radio shack was a great place for a young person interested in electronics
to work in the early '70's. Today's R/S employees are nothing like us "old
timers" used to be. Today, I go into a R/S store and ask them about a
pay-as-you-go cell phone plan that they have mentioned on their own
store displays, and they don't know anything about it! Nothing technical,
just a matter of knowing the specifics of the plan! Sheez! My brother Tom
told me one of the best stories about current R/S cluelessness: He
went in to his local store and asked for a particular Operational Amplifier.
The salesfreak indignantly replied, "All of our amplifiers work, Sir!"

Carl:

Brian made the statement that "Extras" such as Dick, Dan, Bruce, and
myself wish to "destroy the amateur radio service." Obviously, he thinks
we want to do this because we *are* PCTA's, and see the value of retaining
code testing (what's left of it) in the ARS. In other words, because we
don't agree with him and the NCTA's, we want to "destroy" the ARS.
Do you think this is accurate? Do YOU think that us PCTA's want to
"destroy" the ARS?

AFAIC, when the FCC finally gives us a No-Code Test ARS licensing
system, the "destruction" of our hobby/service is self-assured. About
the best we can hope for is for the NCTA's to continue with their traditional
apathy and laziness, and somehow not flock to the ARS in any great
numbers. We would also require the assistance of the ARRL and the
FCC to resist the urge to expand HF phone spectrum, but I don't see that
as something the ARRL would do, so the FCC will be happy to oblige

when the petitions start coming in. In any case, the future of the ARS looks bleak, and it will be the non-code tested "newcomers" who will be administering the coup de gras.

BTW, Carl -- the only reason you're an "Extra" is because you waited until the code test was dumbed down to a maximum of 5 WPM. That's not being a Real Extra(tm) in the opinion of any of the traditional PCTA's. You're just a wannabe Extra Pretender who got in on an Affirmative Action program.

The original poster wrote:

"Critical everyone submits a reply comment ASAP."

Looks pretty blanket to me.

>> >Good idea. Make everyone think uniformly...yeah, that's the ticket!
>>
>> What is YOUR thinking on BPL, KIm?

>Well, I don't think I have a position on it, Jim. So, I would personally
>refrain from commenting.

Well, there you have it.

> I would not automatically think it was a bad idea
>just because I am a ham radio operator, though.

Nor would I.

However, after looking at the engineering analyses of what it would mean to hams and other licensed users of the radio spectrum, I think it is a very bad idea.

>My point with the comments
>was that uniformity can sometimes be seen as ignorance--and the FCC is
>probably in a position to determine if they are getting canned messages or
>not.

Sure. Uniformity can also be seen as strength. If millions of people vote for Candidate X next year, does that mean ignorance?

Lack of comments can be, and probably will be, interpreted as lack of concern.

>It always a good idea, if one is participating in a mass effort to at
>least come up with something truly original--even better to come up with
>something that directly impacts them.

Exactly. But all that is for naught if no comments are filed.

It is also a good idea to mention relevant background information, such as amateur and professional radio and engineering experience and education. Even though we may think that an argument should be judged on its merits alone, regardless of who authors it, FCC does look at that stuff.

And even if there is no BPL where I live, it will have an impact if I won't be able to work hams in a BPL area.

>> btw, BPL will be just as vulnerable to disruption from physical damage as
>> cable, dialup or DSL because the wires are on the same poles or in the

Well got news for you. It's the anti-social nerdy types in our society that make the majority of technical and business advances. They are focused on their goals rather than looking for social clubs. All of our computer technology has come from the "geeks" and some of those boys have gotten wealty (Bill Gates comes to mind here).

EVERY club had that problem in the beginning. However each of the successful clubs had a leader who was willing to WORK to overcome all these factors. It certainly looks like your expectations of what it takes to get a club going were very unrealistic.

Maybe if they were first dipped in a fungicide? But even if I were to
wear your shoes, I would deal with my problems constructively instead
of lashing out at other people.

276. Ed Hare (W1RFI) of the ARRL on BPL replies to comments

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-03 19:51:08 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0308031151.57914794@posting.google.com>
Source record: 73691

From Ed Hare (W1RFI) of the ARRL on BPL replies to comments;
(repost from QRZ)

What I believe to be most important at this point is that the FCC get a wide range of input that is not all "ARRL" material. Analyzing ARRL's material is fine, but it really does need to appear as an individual contribution, not just a "me-too." That is why ARRL hasn't put out a "form letter" to be used, because especially in the NOI stages, this is not a vote. I have seen a number of excellent posts here outlining things I hadn't thought of.

Over this evening and into early next week, I intend to start reading the various company and organizational filings in detail. Naturally, I will put together a technical recommendation to the DC guys, who will use them to develop ARRL's "political" position and to write the ARRL filings. Because this is a rulemaking process, all the major players tend to keep their "stuff" close until the last day, to give those with different positions less ammunition. So, unfortunately, I am not sharing what I have learned with even the amateur community, except in the most general terms.

I can say that I just got back from a 1300-mile drive to several of the test areas, and the ARRL article used a description I considered carefully before being quoted -- the interference to HF that I observed was devastating. The APPA folks demanded that any claims of interference be proven. I believe we can give them exactly what they wanted and do just that. It is not just amateur radio that is at risk here, but any use of HF that operates near BPL installations operating on their frequencies at the limit of the present FCC rules cannot help but hear the BPL signals loud and clear. I had done calculations of what to expect, and the system that operate at the present limits did just what I knew they would.

The real issue is interference. The BPL industry is claiming that there is no interference problem, but where are THEIR calculations? Where are their interference studies? They have offered no information about the frequencies their systems use, no information about what field strength they measured in their Part 15 verification tests. The only basis on which they make that claim is that they have "no reports of interference" and by pretending all the overseas amateur studies don't exist, and claiming that there has been no interference worldwide.

Some did provide some power levels, of -50 dBm/Hz. This power level results in a conducted signal level of 48 dB higher than the present limits for conducted emissions for most other devices, upsetting the

present order by a factor of 70,000. How can this not have an effect. They want to add 10 dB, so their conducted signals would be almost a million times more powerful than the present conducted emissions limits. Ever hear a neighbor's computer system? Want to multiply that by a lot?

>>
>> No imagination, either.
>
>When dis imagination or, for that matter, creativity have to be part
>of the filling/process?

When someone truly has the interests of the ARS in mind, they will look at the complete picture rather than take a narrow view. This is particularly important in dealing with FCC because we have seen how long it takes them to do an amateur service NPRM cycle.

>
>> >The rule changes requested herein would terminate the telegraphy
>> >examination requirement and permit existing Technician Class operators

>> >have the support of the ARRL Board since they have yet to develop a
>> >position on the matter. In support of its petition, NCVEC states as
>> >follows:
>>
>> >I. Introduction and Background
>> >
>> > Since the turn of the century, the Morse code, invented by American
>> > Samuel Morse and first used in 1844, has been the foundation of early
>> > distress and safety communications. Although Morse code (or CW, as it
>> > is commonly called) was the primary mode of communications from the
>> > late 19th Century through the early 20th Century, it has all but become
>> > obsolete in practically all other contemporary communication systems.
>> > Due to the emergence of satellite and digital communications, manual
>> > telegraphy is no longer used or required in any radio service other
>> > than in the Amateur Service.
>>
>> Amateur radio operators, however, use it extensively. On the HF/MF amateur
>> bands, it is the second most popular mode of communications, only slightly
>> behind SSB in popularity.
>
>So?

So it makes sense that the things that should be tested for an amateur radio license should be derived from what hams actually do, rather than what other services do. Would you support questions on multiplex stereo FM on the ham test? That mode is widely used in the broadcast service.

>Hams also use differnent languages (Engish, Spanish, Chineese, etc.)
>yet no one is mandated to use or be tested in any language other than
>that of their "home" country.

How many US hams regularly use a language other than English on the ham bands?
Betcha it's far, far below the number using Morse/CW.
>
>> The Amateur Radio Service is unlike other radio services in its needs and
>> resources.
>
>So are you sying amateur radio "needs" morse code testing? If so,
>the burden of proof hasn't been met as per FCC R&O for 98-143.

All I'm saying is that comparisons with other services are meaningless because
the ARS is completely different.

>> > Radiotelegraphy in the maritime service has been phased out in favor of

>>
>> Most radio amateurs are not on ships.
>
>So the validity of having a trained morse pool even 20 years ago
>wasn't or shouldn't have been because other services used morse.

The validity of the "trained pool" argument depends on what you mean by
"trained". There's a lot more to it than a 5 wpm code test.

>Interesting, did you make that comment when no-code was first proposed?

When was that? 1975?
>
>> > Even though the commercial world eliminated Morse code as a

>>
>> There is no requirement that any radio amateur actually use Morse code.
>> Radio amateurs use it by choice.
>
>The statement isn't one of USE, it is based on a prior
>international requirement...now gone, dead, caput, finito, over.

The NCVEC statement does indeed say that the USE of Morse has continued because
of the TEST. It gives no other reason.

Here's the statement again:

"Even though the commercial world eliminated Morse code as a communications
medium many years ago, it has continued on the Amateur bands because manual

Morse proficiency was an international Amateur Service requirement when
operating on spectrum under 30 MHz."

The word "it" refers to "Morse code as a communications medium" in the above
sentence. NCVEC is saying that hams continue to USE Morse because of the TEST.

That's just plain not true.

>> Other services are constrained by considerations of cost, particularly
>> labor cost. They consider elimination of the need for a skilled radio
operator
>> to be progress. Amateurs do not.
>
>You speak for "all" amateurs?

Yes. Do you think hams want to be eliminated?

>Perhaps you should have said "some"
>amateurs.

Perhaps there are a few who want to be eliminated, but not many.

The point is that for other services radio is a means to an end. To hams it's
an end in itself.

>In any case, learning morse does have a cost to each
>and every amateur that does so. I see no reason to "mandate"
>that cost upfront for access to amateur radio.
>
Your opinion, very reasonably stated and noted.

>> To most other radio services, radio is but a means to an end, not an end
>> in
>> itself. Amateur radio, by contrast, is radio for its own sake.
>
>So?

So amateur radio should not be judged nor structured the way other services
are.

>
Yet it has been made repeatedly in the past, and is made several times in the
NCVEC petition. What does it matter if someone is a Ph.D in EE, has a bunch of
patents, etc., etc., if all they're going to do as a ham is work SSB DX with a
manufactured transceiver and antenna?

>
>Because they "can" if they wanted to.

BINGO!

So since a ham can operate Morse if he/she wants to, why is it unreasonable to have a basic Morse test? There are probably far more US hams using Morse today (by choice) than there are US hams today using homebrew stations (by choice).

Of course there are some like me who use Morse with a homebrew station...

>If a non-coded ham gets
>on the air to learn using morse with another ham...what's the probably
>harm to others and or anyone compared to constructing or repairing
>equipment themselves?

Depends on the situation. I can tell you, however, that the knoweldge required to pass all of the writtens is only a small subset of that needed to homebrew even a simple amateur station.

>> > While it continues to serve some amateur operators well, as it did in

>
>Are you proposing not allowing hams to build their own?

No - just the opposite.

But note that NCVEC doesn't see a problem in requiring theory in the writtens
because *some* hams *might choose* to homebrew....

That depends on what you mean by a "subject". If you define a "subject"
narrowly, that's true. But not if you define it as, say, "theory".

well dougie is a product of his environment.....the hamsters
thought it would be a good idea to relax the entry requirements into
ham radio and then this type of twit is what they get.....case
closed.....the hamsters now need to get used the fact that they
will soon further increase the reality tv watcher population in their
ranks, when they eliminate the code requirements....and as that event
happens, little jerry and the rest of the do-gooders will have their
hands full policing these morons .....instead of whining an a cb
newsgroup about qrp good buddies talking on 10.....

> Handout Ham Licenses?

This is actually not such a bad idea. I've always supported dropping the
155.3 mi. limit on CB and the idea of allowing hams to reduce their power
and elmer CBers on channels 36 through 40 USB on the finer point of DXing. I
think it'd be a great recruitment tool, just MHO.

283. French pirates on the 45m aircraft band

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-03 21:33:15 UTC
From: Anonymous via the Cypherpunks Tonga Remailer <nobody@cypherpunks.to>
Message-ID: <b703f35e62495a988164f7319fdf55a9@cypherpunks.to>
Source record: 73698

You probably can hear them too, some
are using also quite every night the frequency 146150 KHz in FM, sometimes in duplex with the 45m band. They live near
Paris, so the US embassy in Paris could hear them easily every night between
midnight and 2 A.M .
One of these well known pirates is named
Jacky, he lives in the town of IVRY
(near Paris) and was previously the
president of the radio-club of this town
some years ago. He was born in 1955, his family name begins with a "B", and he is using an ICOM IC-706 for piracy.
He is a CBer, not a ham-radio operator.
Another pirate is using the call "Mayran" is also well known on 45m, 11m and 146150 KHz (military frequency in
France, the 2m amateur band stops at 146 MHz).
Keep that in records for the FBI !

> Sounds like you're hedging your bets, Alun.

Not atall. Since about 1995 there has been a paradigm shift caused by this medium we're using right now (the Internet). If code testing had been abolished significantly before that it would have boosted our numbers far more than it ever can now. All I'm really saying is that that opportunity is lost.

>>
>>Sure, 5 wpm is easy (higher speeds were not, but that's moot now).

As a sideshow it generates interest. Think of it as being like a demonstration of some obscure craft in a living museum. Sure, people find it interesting watching a blacksmith shoe a horse (and that's not a dead art either), but it doesn't mean they are going to learn to do it.

You know I won't (a wise man only asks questions to which he knows the answers, and you're no fool). I have always disagreed with a skill test in Morse being a condition for HF phone. I have never heard an argument for that that makes logical sense.

Sorry Alun, I'm represent the exact demographic the disproves the above statement. I'm a newbie AND a CBer and Element 1 offers absolutely NO deterent to those interested in AR HF ops. Now to those who do not even want to put forth any effort...?

> Sure, 5 wpm is easy (higher speeds were not, but that's moot now).

The just do it. (Not you personally, figuratively, that is.)

> However, the CW test manages to be too slow to impart any genuinely useful
> level of CW ability,

That's because it not supposed to. It "forces" the newbie to get a taste of CW. Then it's up to the individual to either take him/herself further or drop it entirely. Many will never know if CW truly interested them because they will not have been made to even try.

> whilst at the same time putting off prospective hams.

INACCURATE STATEMENT! It puts off lazy prospective hams.

> Sure. there is a lot of CW use by hams on HF, but there are precious few
> prospective hams who want to use it.

Sorry, here I am again...Exhibit A and proof to the contrary.

> Put in all the written questions you
> like on CW, though, as that won't cause the same kind of problem.

Er, as long as the answers are published...hmm?

> Keeping out all those who aren't interested in CW may keep a few
> 'breakers' out, but it keeps out most people, period.

"Breakers?" If you mean CBers, again...Exhibit A. Like I've said before, I'm nowhere even NEAR Morse proficient...but after 20 min. twice a day for three weeks I can dust Element 1 any day of the week and twice on Sundays. (...and likely at 100% copy.)

> If we keep a code test, the hobby will fail for lack of
> interest. Luckily, I don't expect that to happen.

Neither do I.

I once tried to "school" a guy on DXing. He's a little too slow
for help. I have even made DX contacts and passed 'em on to him.

Exactly. It's nice to see it so neatly. It's the same reason that students
are required to study a number of items which they may or may not pursue in
the future.

Much cut out but for this one:
>I have always disagreed with a skill test in
> Morse being a condition for HF phone. I have never heard an argument for
> that that makes logical sense.
>
The FCC Charter Part 97 sez:
97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

Only (d) is quoted as follows

(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.

So until the military abandoned Morse Code (recently), having a trained pool of operators proficient in Morse was a national asset. Certainly was true during WWII and the Korean war (in which I sent and received volumes of Military CW traffic), even into the cold war this was true. Sounds logical to me, how about you. Remember we are not arguing about who is right, but what is right -- OVER

It had an additional attraction to those Hams entering the military -- a Ham proficient at morse could get a cushy chair at a radio (sometimes). Or more often --- a not so cushy job in a rain-filled fox hole!

Now days - having "trained operators, technicians, and electronics experts" can be a great national asset when the Big Kahuna hits -- ala 9/11 but big time. And Lord forbid we ever have to mobilize a "Citizen Army" again, but if we do -- you can bet ye olde bottom dollar, hams who can operate, maintain, and repair electronics will be in high demand.

Things have changed, so I would now agree that CW skill is no longer necessary (as a test), but we need to test so that we know those entering the Amateur Radio Service know the International and FCC rules and regs, enough technical knowledge to competently operate transmitters, and quite a bit more so we don't end up with a free for all on the Amateur Bands which for the most part has been up to now -- characterized by courteous, skilled, and knowledgeable operators. We need to ensure this proud tradition continues. We don't want a CB band or FRS band on the Ham Spectrums.

Don't bother to tell me that the Ham Renegades (0.01%) are representative of the community as a whole.

That is true - the FCC didn't enact a sunset clause to eliminate code testing
for HF as NCI requested. I never said that's what they did.

The FCC DID enact a sunset clause that TERMINATES HF operation by licenses of
lesser privilege than General class. That's what I've been saying that they
did.

[Count your levels of quotation; you attribute this to me but I didn't say it.]

No, they don't. They have records of which techs PRIOR to April 15, 2000 that have the credit. They do NOT have records after April 14, 2000 because those are held by the VECs and never forwarded to the FCC.

> If someone follows your (VERY BAD) advice and gets cited for it,
> I hope they explain that "(fill in the names from usenet) told me it was
> OK" and the FCC comes knocking on your doors with citations for
> #2 above ...

I never said that it was OK for a no-code Technician to operate on HF.

I have said that it is NOT OK for a coded Technician to operate on HF because his authority to do so has been rescinded.

You are confusing my argument with that of someone else. I agree with you that the originator of this thread is incorrect - but I went further by saying that due to the language used in 47 CFR 97.301(e), Technicians and Novices have LOST their HF privileges.

>> forever. "Cruising" is no longer a daily activity.

>Heh heh, and maybe CW is not so commonly understood by those at the FCC?
>Phil?

Nope - I am told that the requirement still is 16 wpm for field
office enforcement agents and 20 wpm for monitoring techs - yes,
there still are those, just not as many because the mon stas are
all remoted to a central point now, where each can be brought up as
necessary by a single tech. Several of the field office agents are
ex-monitoring techs as well.

As long as Morse is permitted in any radio service for any purpose,
such as IDs in the land mobile services or "permissive" Morse in the
maritime services, or "permissive" Morse in the ARS, that job
requirement will stay.

No, it would not be only by a few folks in this newsgroup. And, I won't
name them because they are from my local area. Suffice it to say their
interference for the use of spelling curse words in CW was frequent and
sufficient enough to end a years long tradition of hams getting together

every night at 10:00PM for a phone net on 10M.

I've already said that there are probably more reasons for that than it being because a CW operator is a finer person than others who are not. And, talking is much easier and quicker to let things roll off that we shouldn't. CW is mostly callsign/whereabouts/weather/TNX and that's it. If an actual conversation ensues, I'm sure no one (except the jerks I know of) would waste their time getting carpal tunnel with cursing in CW.

That is true, and it is often reflected in the things people say when they try to insult others. Both of them have a pretty stock set of insults, which clearly are based on what they understand about themselves, but are gratuitously thrown at anyone who disagrees with them.

One of the funniest parts of reading the newsgroups related to Amateur Radio, is watching Len Anderson eat these jerks for breakfast every morning as a form of cheap entertainment. Not that everything he says is great and exactly correct, but he just does it for fun, and he does run circles around them.

Then I say we test on every mode there is. If you support that for CW, then surely you support it for other modes.

If you espouse the above, it is evidence that you have no
understanding about what CB is supposed to be for and you cannot
keep ham radio and CB separate as they should be.

What you are describing is hamming, not proper (some call it "legal") CB
operating.

>long it takes them to do an amateur service NPRM cycle.

And, unfortunately, the ARS got shot in the a** again by the same
people who will be deciding the BPL issue, the Office of Engineering
Technology within the FCC.

Last week, the ARRL was denied reconsideration of an FCC/OET ruling
that increased the power/emission limits of non-licensed Part 15
devices operating in the 24 GHz band (yes, that's 24 GHz - lots of
amateur satellite telemetry and control takes place there) by a
factor of 10. The potential for interference was great.

The ARRL held that the FCC exceeded its authority by allowing
blanket Part 15 operation of devices that knowingly could cause
interference to the ARS - a licensed primary service - rather than
requiring individual FCC licenses for such devices with attendant
frequency coordination.

The Communications Act gives the FCC authority to issue "blanket
authorizations" for stations operating above the Part 15
non-licensed power levels in the Citizens (CB, MURS, FRS, R/C),
Maritime (Domestic VHF Ship) and Aviation (Domestic VHF Aircraft)
Services, but not the devices in question.

The FCC asserted its authority to do just what it did, and denied
reconsideration. The action on the request for reconsideration took
9 months.

I felt strongly about that issue because although my name did not
appear in the FCC filings, I did contribute some info and direction
and served as a sounding board while the filing was being drafted by
the ARRL General Counsel.

I just hope that it is not a whiff of the BPL future.....

As well as any other radio system operating over a wide area up to the 80 MHz
limit planned. Public safety comes immediately to mind since I worked in that fielf. I know that a number of states presently still use low band VHF for state police communications using direct car to base systems as well as many crossband repeaters with receivers covering considerable areas operating on frequencies between 40 and 50 MHz.
I worked as a field engineer in such a system and RF noise was an ongoing problem. And with the FM systems in use, often the noise will simply keep the squelch closed and the recever won't be aware that the transmitting station is attempting a call.
I recall one such particularly troublesome repeater where that would occur and by the time I could drive to the repeater site the "phantom" problem was gone. After several unproductive tries, I finally found the source of the noise- a welder in a shop about a half mile from the repeater site which welded only ocassionally, and those times just happened to coincide with the repeater desense problems. We wound up relocating that repeater because of it.

If that sort of situation can virtually shut down a single low band repeater I can only simagine the sort of wide area problems could be caused by BPL.

One of the odd things about the animosity between CB and ARS users, is that here in Alaska CB was a *very* beneficial service used pretty much as intended in most Alaskan locations.

Because I worked in the (long distance) telecom business, the places where I've lived were always communications centers, and CB was never popular in those areas. But I also spent a lot of years traveling to nearly half of the villages in Alaska... and in many villages for many years CB was the way people kept in touch with their neighbors until roughly 1980 or so, by which time telephones had been installed in almost all villages. But even after that happened CB remained very popular in many coastal areas with perhaps the single exception of here in Barrow (larger boats, mostly used for whaling, were and still are commonly equipped with VHF marine radios here).

During years of higher sunspot activity the skip that was experienced on CB was a general nuisense to most Alaskan users because it generated an unnecessary racket where the radio was, and interfered with monitoring for significant (perhaps emergency) traffic from neighbors.

Between cell phones and VHF radios, I don't think anyone on Alaska much cares anymore what they do with CB regulations.

Depends on what the "5%" is, Vippy, and whether or not you've got
the perseverence to find it or not. If the "95%" is clay, and the
"5%" is gold, then isn't it worth it to you to get your blue jeans a
bit dirty...???

> ---
> *The 95% number is given for example purposes only. It is not meant to

Why, Roger Wiseman! Fancy you slithering from beneath your bed to make
yet another anonymous post. I've attended a number of meetings and
functions, Roger. I'm told that you only came to the one meeting.

By the way, I'd go very carefully on that stalking stuff, Rog. You've
frequently harrassed me here and in direct e-mails. You have an arrest
record and you've been booted from a couple of ISP's. You've been
cautioned for malicious QRMing on 20 meters and have been forced to
retest.

> > Most of the hams

> > only. I don't know any who've designed and built a linear amplifier.
> > Only one other is interested in collecting and restoring vintage gear.
>
> Yep, they are a clique of losers.....

Oh yes, I neglected to mention that we have one dysfunctional individual
who exhibits sociopathic behavior on several levels. He frequently
haunts the rec.radio.amateur.misc and rec.radio.amateur.policy
newsgroups and posts irrelevant stream-of-consciousness filth (usually
unrelated to the thread topic. His over exhuberance has led him to the
malicious interference incidents on 20m.

Actually, Roger, the only real loser is you. You're hardly a clique.

> > I continue to attend. We interact
>
> Except the fact you fail to bathe regularly, you mean.......fuckstick.

It looks like your still battling that rare form of Tourette's Syndrome.

> >based on our common interests rather than the things which divide us.
>
> Yeah, those common interests being not helping newer hams......

How could you come to that conclusion? You haven't been attending
meetings.

> > > The other alternative is to start my own club. I tried it, but that was not too
> > > successful.
>
> btw, fuck off, High-el.

BTW, forwarded your stuff to Chief Stenger in Glen Dale. It is about
the only way to make a case against someone who has no interpersonal
skills.

Ta-Ta for now.

So that's a statement of fact which deals with Carl's level of
experience and Carl's motivation.

> > Carl crowed about

You seem to have it fouled up. Carl did the whining. His comments
aren't alleged. His comments are archived and on the record.

Cast attention? As much as you'd like to make this about me, I'd have
likely sat quietly until Carl saw fit to include my name in his sermon.
This is about Carl having the gall to preach to others that they are the
enemies of amateur radio.

> > > Perhaps you like your terms,

> else.

Look, Kim. Carl wrote something and included my name. He did it in the
clumsy and loutish style that we've come to know over a period of years
before your appearance here. The "New Carl" with pancake makeup and
carefully scripted comments wasn't fooling anyone who had earlier
dealings with him. His latest stuff is pure "Old Carl".

> > > Is this another chapter in your book?

Things have intentions?

> The requirements for ham radio have changed here in the
> United States and now, indeed, the world. What about that is so difficult
> for you to grasp.

I grasp the concept of change quite fully. Standards can be raised.
Standards can be lowered. We've seen standards lowered.

> I note your folding my remarks up into your neat little package of, "if one

Robert:

I don't know if my present occupation is as much "chosen" as "found."
I am a Paratransit Operator, which means I'm a specialized bus driver who
operates a bus equipped with a wheelchair lift and securement locations
for up to four wheelchairs, and adaptable seating for ambulatory passengers.
I transport elderly and disabled passengers who qualify for our service
under the Americans with Disabilities Act (ADA). I provide door-to-door
service throughout my county. The job is quite a challenge, and the people
I deal with are, for the most part, very nice and appreciative. There are,
exceptions, of course, and some people are more of a challenge to work
with than others, but that's part of the overall challenge of the job. It's a
job
that requires good people skills, and the ability to adapt to constant
change. I don't know how long I'll be doing this, but for now, it suits me.

Well done Carl. Time to cut the usual RRAP crap and get series here,
screw the unending code test flames, we have a REAL policy problem
this time.

Do you think it is likely that the FCC will pay much if any attention
to the rather offhand electronically filed comments by individual
hams?

We asked for access to 60M. Looked like a done deal until the NTIA
jumped in late in the game and for all practical purposes NTIA pared
our access back considerably from what we expected. Reason: The events
of 9/11/01 caused a top-to-bottom review of all government comms
assets and the gummint itself decided to limit ham interference
potential on 60M for it's own "rediscovered" critical HF comms, etc.,
etc., you don't need the rest. So now we have a potential interference
source for those comms which makes any ham comms on 60M look like
peanuts in comparison, etc., etc. again. Where the hell is NTIA on
THIS one??!

Where are the HF aeronautical users? How 'bout all the emergency
services ops in the 30-50 Mhz range? BPL will not degrade their comms
because the FM they use "rejects noise"? Not hardly. How many
additional non-recreational HF users will be seriously affected by BPL

and where are their "comments"?

The Japanese goverment disallowed BPL because of the obvious threats it poses to the HF/low vhf spectrum in Japan. How do hams, civilly, strive to make sure the FCC becomes aware of (tongue in cheek) and factors in that precedent? Are there any English language sources available for copies of the Japanese telecomms authorities rationales for rejecting BPL? Might be useful . .

I'm not a fatalist by nature but unfortunately I think this one is 100% out of our hands. But I think we still have to put up the good fight.

Oh Geez. Not the same unelected, non-FCC guys that unilaterally
decided to jettison the 5wpm Morse Exam for the 13-15wpm Farnsworth
Exam, and deny HF access to otherwise qualified people who just can't
beep fast?

Come to think of it, I'm trying to remember the last time I voted for
the top few guys at the ARRL.

The companies pushing BPL are clearly doing a massive snow job or they have no techincal copmetence,
and that isn't at all likely. They know what this stuff will cause, assuming they do have competent
people and aren't squelching them for the good of the "cause".

We don't know who, at what level of competence at FCC is listening to whom, and *who will decide*, and
on what basis. If "the fix is in" the fight
obviously becomes much, much tougher, and may require court action after the
R&O, and if that's the way it plays out, it HAS to be contested. This simply won't fly in the real
world. I spent a career working with a statewide Public Safety
communications system that simply could not co-exist with BPL. I can't imagine those people jsut sitting
on their hands and letting BPL become fact.

I haven't spent the hours and hours it would require due to the plodding dialup I use, to read
extensively in the posted comments at FCC website, but I sure wonder if any of the Pub Safety people
are paying attention. I know most of them would love to move up to some U/SHF trunked system but the $$$
involved is prohibitive today, and they WON'T be doing that any time soon, so they'd sure better fight
this off.

No, no, no, no, no. It has nothing to do with your disagreements with
me.

Larry, right after you told that guy not to let the door hit him in
the ass on his way out of the ARS, you said that the FCC ought to take
all the VHF and up amateur bands and sell them to the highest bidder.
Or was that after you said who was your favorite black on the bus? Or

was it after you said something about the knuckle dragging 4-lander with the southern accent? Maybe it was after you talked about the welfare mother of color with her hand out?

In any case, you wanted to destroy the ARS for the no-code Technicians, and it had nothing to do with me.

Good point Jon. As I said when I tabulated the WT Docket 98-143 comments, the amateur radio community is more or less divide on the Morse code exam issue. The issue can not be decide consensus or polls. Commission will dispose of this issue in due course. There is no good reason for the ARRL to waste any more funds on the Morse code matter. At WRC 2003 not one radio administration spoke in favor of retaining the mandatory international Morse code requirement.

The ARRL did a lot of good work in getting a an agreement of the realigment of 40 meters. I though it would be impossible.
But look what can be accomplished when ARRL spents it resource to solve a problem that makes sense even to SW broadcasters. Kind of like a bandplan for hams and broadcasters.

I love how you give us "numbers" about how "unbalanced" you find
Amatuer Radio, then when called on your numbers you throw some excues
out about how you're NOT qualified in the first plce to MAKE that
assertion.

> >>Probably same would be true about the social aspect of newcomers. Thats why

You have been offered countless exmaples of OTHER things you can
do in Amateur radio, but you keep harping back to two or three things
you DON'T like and presenting them as the "only" thing there are to
do.

What an idiot, Vipul.

> Most of the young people are of the anti-social nerdy type that others would
> not like to be with. Therefore, other young people don't join.

Double idiot.

> Hams with those interests, I would not have to start this type of club.

Sure you would. Almost every "specialty" club (DXing, contesting,
ARES, etc) starts as a sub-group of some other organization.

> The other person, although not an EE, was sincerely interested in technical
> projects.
>
> Due to certain factors such as the lack of a meeting place, getting enough
> members, and lack of funds, and other factors, the club could not get started.

The club could not get started because YOU did not possess the
organizational skills to make it happen. You only had 2 or three
people interested? Then meet in your living room for now! Have your
"meeting" over coffee or drinks at a night club.

People usually do NOT like joinging something that doesn't have
form and function, so it takes a few like minded individuals to get
the program rolling.

Unless you are going to try and "out-do" the ARRL on day one, it
does NOT take a lot of money to get a new club started.

So far, the only reason for NOT getting your club started is
wimpy excuses and a lack of determination on YOUR part.

Period.

If the FCC has closed all their fixed monitoring stations, it was probably in favor of better and cheaper technology. In other words, I strongly suspect monitoring capability is still there - it just needs an employee interested enough to do something with it (or perhaps enough employees to do something effective with it).

On the other hand, I haven't seen an increase in unlicensed activity. The only two pirates I've heard in this area have recently closed down their operations, though not as a result of FCC enforcement activities. Instead, since fewer people today scan around through available frequencies for something to listen to (scanning instead through the stations they've previously programmed into memories), many pirates are simply finding it more difficult to gain an audience today. Of those people still scanning around through available frequencies, fewer seem interested in pirate stations.

Those things, perhaps more than anything else, may eventually spell the end of pirate broadcasting.

I agree. If someone is going to change the subject of a discussion, please change the subject line and take it out of the tread. By doing so, you reduce the distraction for those not interested in the new subject, but also better attract those who are interested in that new subject (it's no longer buried in a thread they may not be interested in).

Of course, this can't be done in every case or every time a person has a quick out-of-context comment, but it should at least be tried when it looks like the new subject is developing into a major discussion in itself.

And this is not an attempt to be a newsgroup policeman - it's simply a polite plea from a fellow newsgroup participant.

As you well know, Larry, I've talked with Kim over a period of several years in this newsgroup. I'm also one of those now having problems accessing her messages. In this case, I happen to agree with most of her comments - which has certainly not always been the case. Therefore, a rare, but firm, "well-done" was richly deserved here.

But that is very different from your almost endless obsession with Kim. Wherever and whenever she posts, you're almost always one of the first to respond. And those responses almost always display a tinge of emotionalism, perhaps even jealousy. Your comments above are an example of that. Are you jealous because I've complimented "your girl?"

Don't worry, Larry. Her opinion of you isn't likely to go down simply because somebody else complimented her. I don't think Kim's (at least stated) opinion of you could go down much further.

I've seen quite a bit of the "If I don't get my way, I'll take my ball and
go
home." attitude ... you, Larry, for one have said in the past something
to the effect that "If code testing is eliminated, they might as well just

auction our bands off to the commercial folks." (perhaps not an exact quote, but pretty darned close and certainly conveying the meaning of what you've said ...)

Yes, Larry, it is an appropriate and astute question that Kim asked.

You PCTAs are so freaking out of touch with reality that it makes it
so ...

> or keyboarders. Why?

Very simple answer, Jim. The FCC has limited personnel today. The few they have simply don't have the time to sit around listening, as code users pound out their incredibly slow conversations, to catch violations. ;)

Actually, the differences in violations between the various modes isn't that hard to understand. The phone modes dominate ham radio usage, therefore it should be obvious more violations will occur in those modes. In addition, phone users exchange information at a greater rate when compared to CW users and conversations occur more often when compared to data users. Both of these lead to greater opportunities for violations to occur. If all these differences were factored in, I suspect the differences in violations would be far less.

"cooked up" sure smacks of a negative spin. Regardless,
I don't recall the petition claiming to represent a majority opinion
based on any elections, survey, etc. More to the issue, those
that do gather at the annual NCVEC session DO represent
a significant participation and commitment to amateur radio...
of which, I suspect, the FCC is fully aware of.

The NCVEC filing seems to be right on target with regard to dropping
morse testing now that the treaty has ended any mandatory need for same.
Great Britain, Belgium, Germany, Switzerland have already taken the same
route.

I support "questions" about morse on the tests. That is not, however,
the same as supporting a mandated "skill" test for character recognition
ability.

> >Hams also use differnent languages (Engish, Spanish, Chineese, etc.)
> >yet no one is mandated to use or be tested in any language other than
> >that of their "home" country.
>
> How many US hams regularly use a language other than English on the ham
bands?
> Betcha it's far, far below the number using Morse/CW.

The point is that morse is a character set, and the test is a skill
test based on speed of ability, not simple knowledge on a par
with written test questions.

> >> The Amateur Radio Service is unlike other radio services in its needs
and

> because the ARS is completely different.

Yet comparing it to the other service's need for a pool of
trained morse users was appropriate when it served the
purpose of arguing for morse testing. How convenient :-)

TEST.
>
> That's just plain not true.

Fair enough..but I doubt the NCVEC intended to rule out ALL other reasons
that morse continues to be used by hams other than the test.

> >> Other services are constrained by considerations of cost, particularly

Fair enough, although doing so doesn't (IMHO) add or detract
from the need for code testing.

So? In a nocode license world, those that want to use
morse will learn it. Are you worried about new hams operating
at 2 or 3 wpm on the air? Or would you encourage those
to get on the air and learn morse?

Because it isn't needed for regulatory purposes.

> There are probably far more US hams using Morse today
> (by choice) than there are US hams today using
> homebrew stations (by choice).

Because not having a test won't lead to any problems
if hams start out "learnin' on the air" using morse at
speeds we/you miht think of as painfully slow.
Even the ITU never spec'd a minimum speed.

> Of course there are some like me who
> use Morse with a homebrew station...

Personal choice, works for me.

Nope...and that's my point. Morse as a mode doesn't
lend itself naturally to verbal abuse...whereas phone does
allow for easy oral abuse recognized by anyone listening...both
ham and non-ham.

Do you seriously doubt that if the J1 king hadn't helped push
for the waivers of 13/20 that someone wouldn't have invoked
the ADA to gain the same result? We'll never know, but it
seems likly to me as the argument has been raised even
against the 5 wpm test.

I don't see the same relationship between the logic
of a "skill" test vs a knowledge test.

>Then, why not have a "net operation" test? Net operation is fairly
>standard. That's as basic a level as you can get: everyone understands the
>English Language (at least those who are testing for a US amateur radio
>license).

Actually, based on some postings here, understanding of English should not be
taken for granted!

Net operation test? Good idea! In fact, I have posted suggestions here about a
similar (but simpler) test. Basic idea was that the person taking the test
would demonstrate the ability to send and receive simple messages in standard
form using either CW/Morse, voice, or a data mode. I can google up the details
if you want.

However, when I proposed such a test as a replacement for the code test, there
was universal opposition from nocodetest folks. That's when I realized that for
some of the loudest complainers here it wasn't really about the code at all,
but about the idea of operating skills and standard procedures.

>> 2) The person was willing and able to devote the time and effort necessary
>> to learn that skill.

>That has nothing to do with their participation in ham radio.

So? There's no requirement that any licensee actually participate. There used
to be, btw.

>> 3) The person has been exposed to a useful, widely-used-by-hams radio
>> communications mode other than voice or data.

>Like I said, then test on voice. It's the widest-used-by-hams radio
>communication. Why not test the most used mode?

Why test what almost everyone can do?

My proposed message-skills test would have left the choice of mode up to the
person being tested. What could be fairer?

>> >> What does passing the

>> CW/Morse
>> is a very big part of amateur radio today. Of course, that by itself
>> doesn't prove we must have a code test.

>Thank you.

You're welcome.

> And, was that you acquiescing?

Nope.

When you boil down all the arguments, almost everything on any ARS license test
(real or proposed) comes down to somebody's opinion on what's important and
what isn't. Proof just doesn't exist, one way or the other. Take Ohm's Law -
why MUST it be tested? Some hams do perfectly well with little or no knowledge
of it, and yet it's on the tests because somebody thinks it's important enough

to force it down everyone's throats.

>Yes, CW is incredibly important
>and a big part of amateur radio. But, no, it does not prove that we must
>have a code test.

Exactly. Just like Ohm's Law.

>> >> It's bad enough that the written tests don't prove a whole lot, without
>> >> the added argument of CW in the mix. To continue to support CW as

>> You are mistaken on several counts there, Kim.

>> 1) The written tests are what they are. They are in a continuing state of
>> development.

>> 2) ALL ELSE BEING EQUAL, a ham who has Morse skills knows more about
>> amateur radio than one with no Morse skills.

>I disagree. A ham who has CW skills knows more about CW than one with no >CW
skills.

And since CW/Morse is a big important part of amateur radio, a ham who has CW
skills knows more about amateur radio than one with no CW skills.

You cannot escape that conclusion. Of course, that conclusion does not prove
that CW must have its own test, just that "ALL ELSE BEING EQUAL, a ham who has
Morse skills knows more about amateur radio than one with no Morse skills."

>> 3) Morse/CW has certain advantages to hams beyond being "just another
>> mode".

>That does not merit a CW test.

In your opinion. In others' opinions, it does.

>> 4) Morse/CW is more than "just a tradition". It's a useful mode of radio
>> communication enjoyed by hundreds of thousands of hams.

>That does not merit a CW test.

In your opinion. In others' opinions, it does.

>> 5) There do exist folks who want Morse/CW USE (not just the TEST) by hams
>> to simply go away. They are a very small minority, but they do exist. Or at

>> every single "jerk" from the ranks of amateur radio. Or anything else, for
>> that matter.

>I know that, and you know that. But others here either don't know that or
>don't want to let go of that part of the argument.

I've never seen anyone argue that a code test is a perfect "jerk filter". I
have seen people argue that it is not a "jerk filter" at all. I've also seen
arguments that since it's not a perfect "jerk filter", it has no effect at all
on "jerks".

>> Look at how much it takes just to become a physician. The training and
>> testing
>> required is phenomenal, and designed to weed out the incapable. The hard
>> work

>> picture.

>I will not argue the merit of CW testing against the measure of training and
>testing for a professional field. There is no reason to put someone through
>the same stressful training and testing that a physician goes through, for
>an amateur radio license.

Apparently you did not get the picture at all.

The point is simply that NO test or training is a perfect "jerk filter", not
even at the level of what doctors go through.

>
>> >> Using CW as a test to prove "diligence" to the desire of wanting to be
>> >> a ham radio operator is pure crap in my not-so-humble opinion.

>> OK, fine. At least you note that it's your opinion.

>One would hope, Jim, that everyone realizes we post our opinions.

We post both opinions and objective facts. The problem is that some folks try
to pass off their opinions as objective facts.

>> >> It is wrong to even attempt to measure someone's desire and interest.

>> Why? I'd rather have an ARS consisting of a few hundred thousand
>> interested,
>> active, dedicated, skilled, knowledgeable hams than one of a few million

Plug 'n' play, Kim. No test for that. Does it really take a lot of skill to use
an HT?

>> >> You know what I'm saying.

>> Not really.

>> >> And, if CW proves a higher
>> >> plane of dedication and knowledge, then why are there extremely skilled

>> >> CW operators out there, who are real jerks?! And you know there are.

>> No, I don't. Name some. If your only reference is how a few folks behave
>> in this newsgroup, it should be remembered that lots of folks on both sides
>> of the code test fence have behaved like real jerks in their posts here.

>No, it would not be only by a few folks in this newsgroup. And, I won't
>name them because they are from my local area. Suffice it to say their
>interference for the use of spelling curse words in CW was frequent and
>sufficient enough to end a years long tradition of hams getting together
>every night at 10:00PM for a phone net on 10M.

Never heard of such a thing around here. How do you know who these folks
are/were? What was their problem with a local 10 meter 'phone net?

Doesn't take any real skill to program a keyer, computer or keyboard to send
cuss words.

>> >> So, how
>> >> can someone, *anyone* then turn around and say that CW proves

>Not at all. Others already think it does.

Who?

>> But note this plain, simple fact: Almost all of the FCC enforcement
>> actions for
>> "jerk-like" on-air behavior (obscenity, jamming, failure to ID, exceeeding
>> license privileges, etc., etc.) are against hams using PHONE modes, not
>> CW/Morse or data modes. ALL of us have taken written tests detailing what
>> we
>> should and should not do on the air, but it seems like violations are much
>> more
>> prevalent among the talkers than the brasspounders or keyboarders. Why?

>I've already said that there are probably more reasons for that than it
>being because a CW operator is a finer person than others who are not.

" a CW operator is a finer person than others who are not. " Has a nice ring to
it...

>And,
>talking is much easier and quicker to let things roll off that we shouldn't.

All the more reason to promote CW as a mode and downplay voice.

>CW is mostly callsign/whereabouts/weather/TNX and that's it.

Not at all, Kim.

I'm on HF CW several times a week, mostly ragchewing on 80 and 40. Typicla QSO is at least a half hour, usually more. Call/QTH/wx/rig/name/age/ham experience is all done withing 5-10 minutes max at the speeds normally enocuntered. Wonderful QSOs with many wonderful people. No cussing, no jamming, no nastiness. Lots of politeness and good manners. If one or both ops have QSK, conversation flows naturally.

>If an actual
>conversation ensues, I'm sure no one (except the jerks I know of) would
>waste their time getting carpal tunnel with cursing in CW.

Carpal tunnel? Not a problem - the side-to-side motion of a bug or paddles avoids CTS, while the up-and-down motion of keyboards promotes it. Just another advantage of CW...

That's a traditional value of amateur radio. Trouble is, some newcomers take the attitude that the would-be Elmers are simply cranky olde fartz who want to keep things the same way forever, don;t know what they're talking about, yada yada yada.

What's even sorrier is that there is such misunderstanding about such basic rules. Obviously the written tests need serious work.

amateur
> radio than one with no Morse skills.

Correction ... a ham who has Morse skills is able to operate better Morse
than one with no Morse skills. PERIOD.

> 3) Morse/CW has certain advantages to hams beyond being "just another
mode".
> 4) Morse/CW is more than "just a tradition". It's a useful mode of radio
> communication enjoyed by hundreds of thousands of hams.

So? That is no reason to make it a requirement, when the majority of hams
and would-be hams have no desire to use Morse.

>> Look at how much it takes just to become a physician. The training and
testing
> required is phenomenal, and designed to weed out the incapable. The hard
work
> and dedication required just to get into medical school are extraordinary,
and
> yet that's just the beginning. I could go on and on, but you get the
picture.

Apples vs. oranges ... providing medical treatment is often a life and death
thing ... being able to operate/or not operate Morse is not.

As far as the "character filter" thing goes ... the FCC has already ruled
on that ... it doesn't fly.

> Why? I'd rather have an ARS consisting of a few hundred thousand
interested,
> active, dedicated, skilled, knowledgeable hams than one of a few million

Code
> test or no code test.

You seem to leap to the conclusion that folks who are not interested in
Morse fall into the "inactive, apathetic, unskilled, ignorant" category.
False assumption, not based in any factual reality.;

Because it's a silly requirement and not necessary now that the ITU
Radio Regs have been changed ... however, it will take a rules change
by the FCC to fix it.

"Us Extras"? Whooo, that's rich, Carl!

> For example the vast majority of the Directors of NCI are Extras (or
> their national equivalent thereof).

What differentiates a majority from a vast majority? In a country with only two license classes, the higher class license is equivalent to the U.S. Extra?

> Additionally, there are a significant number of Extras amongst our
> membership ... at least in proportion to the % of Extras to other
> license classes.

What constitutes a "significant number" of Extas when compared to the percentage of your membership holding a license for which no code test is required?

> So, it's not "the Extras" ... it's the PCTAs ...

...and I gather that you don't have many members who support code testing :-)

So you can dodge reality here just as easily as any other area where it suits yoiu and your Agenda. No surprise whatevver. If you don't think that the majority of Rado Shack stores carried a much better line of parts and that the employes knew much more about them 20 years ago, you're as clueless here as you've clearly demonstrated yourself to be elsewhere.

Yes, thast *is* the point, indeed. As you well know being able to recognize Morse characters written on paper has nothing whatever to do with copying in off a radio. It exhibits so little knowledge as to be of no value.
No one can copy by ear or any other way with no more than that.

Which shows yojust how flawed and clueless the entire No Code Agenda has always been.

Your response isn't directed to my statement. You don't approve of what
other club members do and you want them to do what you want. When they
don't, you complain bitterly.

> It takes
> a prominant place in the club publicity. Except, the photograph is a
> mis-representation of what the club members are truly interested in.

Make up your mind. Are you interested in charging them with
misrepresentation or do you want the members to do what you want, rather
than what *they* want?

> >I'll wager that most "old timers" aren't even involved with a radio
> >club.

>
> They don't go to club meetings.

Some go to club meetings. Many do not. A "local" club meeting for me
is a minimum of 26 miles and a maximum of 37 miles.

> And they don't go to Hamfests.

A number attend hamfests. A larger number does not. A number of new
licensees attends hamfests. A larger number does not.

> Nor are they on 2m.

A number are on 2m. A number are not. That band is but one band among
many allocated to the ARS.

> I get it - they don't exist.

No, you don't get it.

> >You'll have to use the callsign database and begin making phone
> >calls or knocking on doors to come up with a scientific sampling
>

It is needed if you want anyone to believe your blanket generalizations.

> If that person's experiences are of anti-social, mostly male, mostly
> older, non-technical (if they are interested in that), Hams, then > thats all they need
to know.

Most hams are male. That is a fact.
The median age for hams is in the late forties. That is a fact.
Most hams are anti-social. That is not a fact.
Most hams are non-technical. That is not a fact.

> It won't do much good to show them the other aspect that
> "could" exist, but does not exist for them.

If you are the individual doing the showing, those folks could have a
gut full of misinformation in no time.

> >> There have been exceptions of course, but it is too rare to be worth > the
> >effort. I cannot search out the contradiction.
> >
> >That's right. You've begun with an outcome and you're trying to make

> I'm not making any statistics fit.

Certainly you are. You begin with false assumptions and attempt to
prove them to be true. That isn't ever going to work.

> I'm saying that if something is 95%* and it
> takes you a certain amount of time to come across the other 5%, then > its not worth the
effort.

Something is 95% what? Maybe we're dealing with your frequent assumptions about those involved in amateur radio. My guess would be that your statements are 95% falsehood and 5% truth. I guess it isn't worth the effort to sniff out that elusive 5%.

Well, it's certainly clear that if the CW test reduces jerks on CW,
then a talking test would reduce jerks who talk on their radios?

PTTI! Damn, Jim, what a concept!

Or maybe your whole jeremiad about FCC enforcement means that FCC
monitors are no-coders who wouldn't recognize those infractions when
done in Morse.

Or maybe attributing a lower "jerk quotient" to Morse operators is the
lamest excuse EVER for keeping a Morse examination.

Sunuvagun!

With all kind wishes,

de Hans, K0HB

Comment On This News Group

There is a lot of good stuff here, but also an incredible amount of junk.

Another place to reasonably discuss Amateur Radio is at the Yahoo Groups.

http://groups.yahoo.com/

Search for "Amateur Radio" get over 1200 places to discuss your interests, mostly without flames, insults, off-topics, false information, and the stupidity that is prevalent here. Some are moderated, some public.

Lots of Elmers have left here and are now on Yahoo Groups.

Just FYI

Gets down to who is snowing who. I doubt that the power companies have much in the way of inhouse expertise in the field. It appears that those who have the big interest in BPL are the firms who have the expertise, such as it might be, and want to sell their wares to the power companies. Might be that the power companies were the first layer to get snowed and now they're at the same game with the FCC. Looks to me like these outfits are small startups looking for a reason to exist, none of 'em ring any bells as proven Internet heavyweights.

> We don't know who, at what level of competence at FCC is listening

Opaque as hell, so much for "open government". Particularly with the current administration. But we already knew that.

> If "the fix is in" the fight
> obviously becomes much, much tougher, and may require court action after the

Something is going on within the FCC, why did the OET extend the reply comment period?? I think that's a pretty unusual maneuver. And it was done by an FCC technical office. I doubt the FCC high-level no-clues would have let that happen if a real fix was in. Something is up.

> this off.

My knee-jerk reaction to this was "where are the heavy-hitters like Motorola" who have a vested interest in lo-band VHF ops?" Silly me, Motorola would love to have the lo-band trashed in order to move *everybody" up the spectrum whether the taxpayers can afford it or not.

Or do the pros already know BPL is going nowhere and can't be bothered with getting into it??

This bull has more horns than I can count.

Time to ship Carl back to Washington to do something actually useful this time.

Following your line of thinking, why doesn't the test include
listening and transmitting on AM so prospective hams get the
opportunity to be exposed to it? Also FM, and all the other modes?

Still, you're saying that increasing growth was and is a reason to get
rid of Element 1.

As for the internet, I say it is only one piece of a much bigger
puzzle. The plain simple fact is that the survival of amateur radio is
dependent on meeting needs/desires that cannot be met by the internet,
cell phones, email, cheap long distance 'phones, etc.

Those needs and desires are everchanging, btw. Not so long ago it was
common for a ham's family members to get licenses for "honeydew"
purposes. Some of those family members developed more interest, some
didn't. Today, cell phones and FRS/MURS meet most of the "honeydew"
needs so that recruiting tool is gone.

> art either), but it doesn't mean they are going to learn to do it.

I disagree. Look at the interest in participation sports like running
and cycling. Or in crafts. Or in learning to play musical instruments.

Of course a lot depends on the presentation. If all anyone ever sees
is somebody pounding out 5 wpm on a straight key, combined with horror
stories of how "difficult" it supposedly is, they are less likely to
be interested than if they see a fast effortless operation between
skilled ops and an attitude of "almost anybody can learn to do this
with some practice".

There was a time in my life when, if somebody had told me that I could
run a regulation marathon, I'd have told them they were nuts. Yet a
few years later I had run two of them. The difference was seeing it
done by others I could identify with, developing an interest, learning
what was necessary, and then doing it.

If I know the answer, what's the point of asking the question?

> I have always disagreed with a skill test in
> Morse being a condition for HF phone. I have never heard an argument for
> that that makes logical sense.

Here's one: 'phone takes up much more spectrum.

And if we say there should not be a skill test in one mode in order to
be allowed to use another, it's equally valid to say there should not
be a test on theory in order to use manufactured, no-tune radios
either.

BPL is not a system that needs to radiate RF signals to do its job, it
would be an
unintentional radiator. It's a system going point to point via wires,
not a system
that uses isolated boxes (radios) that communicate via RF "over the
air". Thus there
is no reason why we would need to share spectrum with BPL.

If the FCC commissioners and rule makers actually understand radio physics and not just lawyers, then it would be a good bet that it would be defeated. But even on matters that any politician would understand, the FCC screwed up. That new rule on how many broadcast stations one company can own, for example. I want multiple sources of broadcast news, and the only real way to get that is to have several separate companies owning the various stations in my town.

Do you work for one of the companies promoting BPL ?

Surely you're aware that unintentional radiators are just as capable of causing destructive interference as the intentional when the receiving system being interefered with is in close
enough proximity for sufficient signal to radiate into it. Why else would all part 15 devices
be labeled as they are, "Must accept interference from other sources and must not cause interference etc ". Not the exact wording but the meaning is unambiguous.
These folks even want to change Part 15 rules to make it OK for unintentional radiators to interfere with licensed (protected) services, even to force the licensed services to prevent
interfering with the part 15 devices!

Wanta rethink your statement?

As soon as I see the R&O from the FCC (or a declaration from the
unelected at the NCVEC that they have a copy of an "unwritten" policy
letter from the FCC, such as that which permits Farnsworth exams).

I'm suprised that anyone drinks it, without even considering the
monkeys.

Odd that you ask. He's a guy who frequents rrap.

> Can he not speak for himself?

Not today. He has larangytus.

> Are you his acolyte?

Odd that you bring it up.

I don't believe that Len is of the Catholic faith, nor is he of the Church of Morseodists. And I haven't been an Altar boy in many, many years.

> >> I am not impersonating anyone. I am simply myself.

Curiosity. Obviously you are not yourself when you post as Avery Fine.

Huh, I've been too busy with work to even fire up any of the radios other
than sometimes the ARES traffic nets and SKYWARN. The SKYWARN net takes
place on one of his old haunts the .375 machine which is the one mentioned
the last time he was on the RAIN report.

73 de Keith

p.s. I see that you had some flooding out your way hope your place made it
ok. We had a tornado touch down here this afternoon plus 3 other sightings

which did not touch down. Going to be a busy evening :/

well the point is , is that if this continues to go the way it is.......the hamsters are going to be faced with a large segment of cb types who behave like cb types on the ham bands.........and to a large extent this is already going on.....but they have only themselves to blame.............and to think , they thought by lowering the threshold of admittance, they would swell the ranks of the ham bands with law abiding, rule abiding hamsters, made in their own images, but they did not sit down and calculate jut who it is that would come to the party.....................ham radio is becoming nothing more than glorified cb radio..........and dat's da twut.............

I have an understanding of what CB WAS supposed to be for as well as what it
HAS evolved into. (...and I don't mean the out-of-band lids with the illegal
amplifiers either.)

> and you cannot
> keep ham radio and CB separate as they should be.

Speak for yourself, Phil. I certainly CAN. I have witnessed the shift in
what the "citizens" (Remember that word?) want from *their* Citizen's Band.
I personally have no want to bang my fist down on the table and proclaim
that "that's not what it was originally meant for." That's what it's become,
plain and simple. Don't like it? Then get your fmr. comrades to kick it up a
notch or two wrt enforcement and stop it...or admit their boo-boo (CB on HF
and they can't respond to a natuarally occuring phenomenon, hihi.) and try
to take a little advantage of the situation. It reallly could've been a
win-win situation back in 2000, Phil, but false pride got in the way.

> What you are describing is hamming, not proper (some call it "legal") CB
> operating.

Easy councellor, I'm proposing not "describing" so no crime's been commited.
(Re. my proposal only.) Please reread what I wrote. I find it pretty
interesting that you equate working DX on five channels within a 440 KHz
slice of the HF spectrum with "hamming." I personally think a whole lot more
of ham radio with literally dozens of modes and much much more spectrum at
our disposal. Yes, Phil, I think it's a GREAT idea to whet some CBer's
appetite with the words "If you like what you can do with 12 Watts on CB,
lemme show you what you with just a tad more effort and some studying on
20." Nope, no cutting off my nose to spite my face here, nosiree.

BTW, please notice that I mentioned NOTHING about dropping the code
requirement, (I support its retention) additional 11-meter frequency
allocation, or any increase in the allowed power output.

No, they haven't been tested at 13 wpm or at 20 wpm. I didn't address
that issue.

> Now that Carl can share Dave's band space...

Carl may share some space with me. There are plenty of areas on a
number of bands where I doubt I'll run into Carl. Come to think of it,
I doubt I'll run into you in those spots.

Dick, fortunately, most public safety entities in the past
20 years have vacated VHF Low for VHF High, UHF, T-Band, and
800 MHz, with 700 MHz just around the corner. A major
exception is the California Highway Patrol. They still use
LB statewide, and their system will no doubt be destroyed if
BPL is allowed to happen. When the State of Arizona still
had low band systems for the State Land/Forestry Dept and
MVD, we ran some tests and found that in the Phoenix metro
area, desense of up to 20 dB due to traffic signal
computers, power lines, street lighting, etc was very
common. They had great rural coverage, but couldn't talk in
town. The effect is even noticable on VHF HB (150-174 MHz),
but not to anywhere the same level. We need to raise the
issue of "homeland security" though with BPL. That's the
hot button at the FCC right now that we can press.

>
Maybe I wasn't clear. When I said that BPL is an unintended radiator,
I meant that there is no
reason why hams should tolerate the interference it causes. BPL is
supposed to be a concept
where two nodes of it communicate to each other over power wires, and if
those power wires
were shielded (like coax) then it would still work without trashing HF.
But I know full well
that power wires are not shielded with respect to RF, and that the trash
WILL get out and
ruin HF. And that there is no reason why hams, NTIA, and other HF users
should be
forced to live with this trash. There's other ways of getting on the
Internet. So BPL should
not be allowed to happen.

We could do that now, *IF* we use type accepted (or whatever they call
it nowadays) CB radios
instead of our ham transcievers, and not exceed the distance limit. But
I think the CBers
might see us as invaders on their turf, like we see them when invading
10m. It might be better
to be low key, maybe have the ARRL buy ads in CB magizines that say
something like "if
you get a general or extra ham license, you can DX on many different
bands using more
power (legally) even when the sunspots are out of season. 'You already
love radio, see
how much more fun you can have with a ham license'." Of course one
would have to
wordsmith it right to attract serious and disiplined operators and not
the kids and "lids".
Without making ham radio look condensending or putting CBers down. I'm
not that
good a writer, but I think that it could be done well.

Quite true. The several books available on Morse code discuss the history of the key, bug, and paddles and the latter two were developed specifically to prevent carpal tunnel syndrome, although at that time it was not called by that name. Nothing has yet been developed to prevent carpal tunnel syndrome among those who constantly use the keyboard. The best that they have been able to come up with is to teach people to use the least stressful hand/wrist/finger position but CTS still occurs.

Actually, I think that attitude has become very commonplace. I've heard it off and on for the last several years and it's also something I've heard outside these newsgroups on the radio.

By the way, I can now view your messages just fine. My old news provider was the source of the problem. As you can see, I've switched internet service providers and the problem appears to be gone. I was even able to go back and read those older messages that generated the error message before.

Izzat Len's function here, Floyd? I was always of the opinion that Leonard H. was MY cheap form of entertainment. Of all the posters here, I can't think of one invidual less relevant to amateur radio's past, present or future--not that much of anything he sez is great or exactly correct.

Kim's shuffle and slide has only been topped by the occasions when
Len-Anderson-As-Avery-Fineman sends six or eight posts consisting of
nothing but quotes from another with no input from Len. These have been
identified as "a carefully laid trap". Pure Black Adder and Baldrick
stuff.

Why, that isn't very politically correct of you, Hans. I'm sure she is
a warm human being and has a lovely personality....Oh, never mind.

>than one with no Morse skills. PERIOD.

No, that's not correct, Carl.

Since Morse code is a big part of amateur radio, the person with Morse skills knows more about amateur radio than the person without those skills IF ALL ELSE IS EQUAL. The same can be said for, say, the ham who understands and can use Ohm's Law as opposed to the ham who cannot. Or the ham who can use the standard phonetics skillfully, as opposed to the person who can't.
>

You missed the point completely, Carl.

The bit about doctors was simply to point out that no test is a perfect "jerk filter". Not even the rigorous training physicians go through results in a completely "jerk free" profession. No amount of testing that is reasonable could result in a "jerk free" ARS.

>As far as the "character filter" thing goes ... the FCC has already ruled
>on that ... it doesn't fly.

You miss the point: No test is a perfect filter. The 5 wpm code test certainly isn't.
>

WHERE do you get THAT?

Look again at what I wrote - I'm saying I prefer quality over quantity.

Note the last line: "CODE TEST OR NO CODE TEST"

>False assumption, not based in any factual reality.;

Would you rather have lots of hams who are inactive, apathetic, unskilled and ignorant, or fewer hams that are the opposite, Carl?

Why is it odd?

>I don't believe that Len is of the Catholic faith, nor is he of the
>Church of Morseodists.

Acolyte is a not just a term applied to Catholics. It is a general term
referring to one who is an aide to a leader of a belief system. Often
it means one who is in training. The term "acolyte" is used by Jean
M. Auel in her most recent book in the "Earth's Children" series,
"The Shelters Of Stone". That story takes place long before the
Roman Catholic church, or Morse code, came to be.

Are you in training with Len Anderson?

Are you his acolyte?

I do not know of any "Church of Morseodists".

When I said "or their national equivalent thereof," I was refering to our
Director from New Zealand ... a long-time, coded ham of their highest
class.

> > Additionally, there are a significant number of Extras amongst our

> is required?

I haven't calculated the exact percentage, but we have a LOT of members
who hold an Extra class license ... and that's not just since folks were
able
to upgrade with "only 5 wpm."

> > So, it's not "the Extras" ... it's the PCTAs ...
> >

> ...and I gather that you don't have many members who support code
> testing :-)

That's right ... one of the requirements for membership is supporting
the elimination of Morse testing.

Dave ... it's not irrelevant ... Larry has always spoken quite freely of his
disdain for CBers and other "lower forms of life" (knuckle-draggers, etc.)

The fact that Larry was a CBer, yet talks down to folks with such a
superior attitude, shows what a hypocrite he is ...

In fact when the monitoring stations were remoted, an additional
one was added. The station at Canandaigua, NY was brought back on
line after being closed for a number of years (it was used as the
test bed for developing the remote control system).

The Big Emm stopped making low-band radios and replacement parts almost ten years ago, and RCA and GE have been out of that business for a lot more. That's why several of my clients have gone to UHF and 800 MHz trunked systems. A biggie user in the Low-Band is the California Highway Patrol (5000 or so mobiles and lots of base stations) who has been mouthing about going to 800 MHz for at least twelve years that I am aware of. I'll see it when it happens.

For reasons that I disagreed with then and I disagree with now, (but
that's another story) the FCC' s enforcement response is driven by
complaints, not by "Patrolling the Ether" (tm) as in days of yore.

How many complaints of amateur CW violations do you think "Riley"
gets? (Somebody pounding out "FU" in Morse on a Touch-Tone (tm) pad
on a repeater input does not count as CW....)

Yes, I'm aware of that movement, but there (or were last I knew, I've been out of the loop for a few years) still at least a half dozen states with low VHF statewide public safety systems. California is one of the several, but I assumed that by now they had bought a trunked system with all that money they spent that they didn't have!

> A major

Yep, been there and observed it first hand. *Wide* variations in the noise level which is transparent to the end user. His squelch just doesn't open when he is called and the noise is present!

> They had great rural coverage, but couldn't talk in

Agreed! Now how to orient the issue such that the proponants don't win that battle. Looks like the viability of the remaining public safety systems woiuld predominate, esecially with California in that group. But that point sure isn't obvious in what I've read so far. California should be a BIG stopper to BPL. For certain they won't be upgrading anytinme soon with their money troubles. It's very expensive for a small state, and small sure doesn't fit there! When I first visited a CHP district HQ in 1980 I was told the CHP had 5,000 patrolmen then . No telling how much they've grown since. It'll be interesting to watch this evolve, our ham radio involvement aside.

In article <qK_Wa.2427$lL.391902@nnrp1.ptd.net>, "Carl R. Stevenson" <wk3cqth@wk3c.com> writes:

>What WILL be the end of ham radio is a lack of significant
>growth ...

Let's get it straight - is dropping Element 1 going to give us lots more growth or not?

For a historical context, here are some numbers on the growth of US amateur radio in the past 30 years or so. All numbers are rounded off but are accurate to within 2%. Sources are various Callbooks and US census data.:

US Hams:

1970: 270,000
1980: 350,000
1990: 514,000
2000: 680,000

Growth Rate:

1970 to 1980: 29.6% (120,000 net growth)
1980 to 1990: 46.8% (164,000 net growth)
1990 to 2000: 32.2% (166,000 net growth)

Oddly enough, percentage growth slowed down after the introduction of code test waivers and the Tech lost its code test. The total net growth in the '90s was almost exactly the same as in the '80s, even though the US population was larger.

As a percentage of the total US population:

Year - US population/annual growth - US hams - % hams
1970: 203 million 270,000 0.133%
1980: 227 million 350,000 0.154%
1990: 249 million 514,000 0.206%
2000: 281 million 680,000 0.242%

US hams as a percentage of population increased 0.021% in the '70s, 0.052% in the '80s and 0.036% in the '90s. So the growth slowed down after the introduction of code test waivers and the Tech lost its code test.

It stands to reason that if code testing were an 'unnecessary, arbitrary, and distasteful (to many) barrier to entry', those who were interested, but dissuaded by those unnecessary barriers would "jump in." when the 'barriers' were eliminated. Except that's not what happened, in either absolute number of hams or percentage growth. Growth in total hams was almost exactly the same

during the '90s, compared to the '80s, and the percentage growth actually dropped.

Current number of US hams is about 687,000. Current US population is left as an exercise for the reader.

> as Alun has said, the Morse test is a "no sell" for
>many folks who would otherwise make fine hams.

I think the salesperson can have a lot to do with whether a sale is made or not...;-)

Sad, but true. But they don't see it that way.

One David Heil demands licensed participation in the ARS. But when confronted with mere Technician participation in the ARS that rivals his Extraness, he digs in and destroys. Or at least he tries to. Then there is Extra DICK. Probably Extra in every way except the dick department. Then there's Jim "DeSoda" who keeps rewriting "200 Meters and Up." No need to mention INSANE Clown Posse in a Nurse's dress or the civilian with "real" military experience.

Whatever he say is probably more relavent than working out of band
Frenchmen on 6M. Especially the part about Korean War teletype
operations.

Wow, most of the CW operators I've known even state that all they "pretty much" do is exchange information. Most of them also only use it during a contest, though. Maybe that's the difference.

Yeah, all folks like you like to do is "imply" and then get all uppity and
persnickity when you're asked about your implication.

Let me ask it this way: WHY do you even mention the number of years of
licensure, or for how long certain classes of licensure may have been held,
or under what regulations that licensure was achieved? Why bring it up?

I've stopped here on your post, so if there's any *real* pertinent stuff,
I've missed it...

Likely because it is a fairy tale. Leonard would need assistance to eat
mush for breakfast. You've been asked if you're his acolyte. I think
it would be more fitting if you were to be known as his electrolyte.

> One David Heil demands licensed participation in the ARS.

Maybe one of 'em demands such but it isn't this one.

> But when

It may be "relavent" but it isn't relevant and more than your attempted
diversion.

> Especially the part about Korean War teletype
> operations.

Oh, yeah! That was loaded with useful information relating to amateur
radio. Len has admitted a decades-long interest in amateur radio. Len
has been posting here for over seven years. He hasn't acted on his
amateur radio fanstasy in those decades and he hasn't acted on it in
seven years. Len's avocation is posting to a usenet group devoted to
soemthing in which he is a non-participant. You're his little
electrolyte.

Carl:

Nobody's going to deny that, especially not me! My own store manager
didn't know what the difference between a resistor and a capacitor was!
However, I'm willing to bet that in the early to mid-70's, there were a lot
more technically knowledgeable RS employees than there are now.

>what you've said ...)

Carl:

Yes, I did say that. And it still seems like a good idea to me, considering
what the future prospects for the ARS are looking like. After all, we're
hoarding literally billions of dollars worth of commercially-viable spectrum,
most of which isn't being used by us (hams) for a damn thing worth
talking about. I'm sure we'll always have most of our HF allocations, but
I expect we're gonna lose big time above 500 MHz or so. And that, in
reference to another post, is just my concept of "reality."

What do 32 years of RF engineering experience have to do with ham radio,
Carl? I'll admit that it's handy to have guys like you around, but most of

the hams I know have no professional-level technical skills whatsoever. We are radio AMATEURS. Your professional credentials are recognized within your profession for good reason -- you deserve such recognition -- WITHIN YOUR PROFESSION. As a radio amateur, however, you're no better than any other dumbed-down Extra-Lite who waited for years to get around the requirement to learn and be tested for a useful communications skill. Sorry about that, my friend, but that's just the TRVTH.

Carl:

Hmmm. How interesting. We're not just "out of touch with reality," we're "freaking out of touch with reality." That sounds a bit severe! Just what, may I axe, makes us PCTA's so "freaking" out of touch with reality? Is it because we believe in the usefulness of the Morse code, and the need to have code testing so prospective hams get the opportunity to be exposed to it? Or is it just that we disagree with the NCTA and NCI, and are able to express our opinions with clarity and conviction? It's gotta be something along those lines!

>So the activity in the photograph never really took place?

Its possible, that it was some kind of demo setup for a guest speaker and the club members just sat there. That could be one explanation.

>> I can ask people in that photograph if they are interested in
>> homebrewing and that person will say he is not interested in homebrewing.
>
>"Will say" or "has said"? If you haven't asked, you don't know.

This photo was taken before I joined the club. Many of the people in the photo are still in the club.

Just look at the majority of activities. Not one has been a homebrew activity since I joined the clubs. Yet, currently that photo is shown. This seems like some kind of misrepresentation.

I could ask a few people in the photo if they like homebrewing. Then, I could take one step further, and ask them why they posed for a homebrew photo if they do not like to homebrew. I would have to bring the photo with me, and track down specific people. That kind of questioning could get too weird.

>> It won't do much good to show them the other aspect that
>> "could" exist, but does not exist for them.
>
>If you are the individual doing the showing, those folks could have a
>gut full of misinformation in no time.

Thats a good challenge. Lets introduce a new person to a Hamfest and see what that person's impression of Ham radio is.

>You begin with false assumptions and attempt to
>prove them to be true.

I didn't begin with any assumptions. I noticed these things at Hamfests.

>

Well. No, you don't have to do that. I believe you ;) I think it's a
great idea to have some such thing like that.

>

>

They had a problem with the way you say you proposed it: as a choice of
either CW/Morse, voice, or a data mode?! Geeze, that is whining! Because I
don't have a problem with that at all. In fact, even if the CW test hangs
around, I think the presentation of it ought to be in net format. The
questions could be something like, "who was the net control station," etc.

used
> to be, btw.
>

I understand that. I also understand there used to be requirement for
upgrading with a certain amount of time. I know that is why there is such a
population of folks who think it's an all-out sin to stay as a Novice, Tech,
etc.

BUT, the current requirements do not mandate that a licensee participate; so
why have that as part of a scope for an amateur radio license? If the
requirement for participation hours comes back, *then* include testing
parameters that will measure a person's willingness, devotion...

>

I think your proposal is similar to the idea of "testing voice." Use a test
that measures the capability of one to conform to net standards. While nets
all have different *styles* the standards are pretty much throughout.

>
> My proposed message-skills test would have left the choice of mode up to
the

enough
> to force it down everyone's throats.
>

True, but you reasoned that the parts of the testing process I have a
problem with were for measure of devotion, and such. We are not discussing,
really, what is important in ham radio for--truly--the only real important
thing for ham radio is that one comprehend, be familiar with, and employ the
Rules and Regulations from the FCC; and become familiar with the "ways" of
ham radio (gentelmen's agreements, standard communication protocols, etc.)

While unpopular for ham radio, if someone doesn't take the time to "be
careful" in building equipment, putting up and antenna, building
this-or-that, it is generally them that is going to get hurt. Advertisement
of a few tragedies and people are going to get the idea that they need some
independent study to be safe in what they do with ham radio. No net
control, RACES or ARES Coordinator is going to turn loose an inexperienced,
rough rider of a ham onto the general public. So, IMHO, the only true
measure for ham licensing should be through a written test that measures
knowledge of the FCC R&R, the Communications Act, etc.

HOWEVER; I concede and certainly will agree to keep CW testing, because I do
believe in *some* of the traditions of ham radio; and CW is one of them. I
also like your idea and would support something like that.

then.
>
> If it does nothing, why all the fuss?.
>

ABSOLUTELY!!!!!!!! Why, Jim? A cursory explanation from me would be: 1)
that CW is such a tradition that any attempt to alter its state is seen as
an assault on a very beloved part of ham radio, 2) that, to many, change is
very difficult; mostly to reason seekers, i.e., if any change is made to CW
is must mean _____ and that CW will fade from the ARS, 3) there is
some degree of....well, jealousy would be a lousy term...but some degree of

bad feeling for others not having to be "raked through the coals" to get their license, and 4) the longheld belief that CW study to pass a test proves what you and I are debating here.

But, the root of your question: "why all the fuss" gets a whole ABSOLUTELY from me. Why all the fuss?

[Snipped, but hopefully illuminated below:]

>

The phrase "dumbing down" comes to mind. Most of us would agree that jerks are dumb. If CW testing is supported to the extent that to lose it is to "dumb down" the ARS, and bring the CBers in, and...well, you know all the comments; then isn't that an acknowledgement of the belief that, somehow, the CW test keeps all that from happening? Like I said, you and I know that it doesn't; but there are those who believe it does.

Well, then let me clarify that I mean I would have everyone who meets whatever requirements there is currently when they are "applying." Maybe it's only here, but I tell you I have seen more crappy people--those who would probably earn the title lid, cbplusser, etc.--get wiped off the air because of being ignored. Now, if the floodgates opened and there is not a testing structure of some kind, or a licensing structure of some kind, ham radio would certainly become a cesspool. Remember that CB radio used to be much better until the FCC relaxed regulations there; or, more to the point, quit enforcement opportunities there.

A looooong time ago; but I am still interested. And, m'darlin' is putting his radio back in his truck so I imagine we'll be full fledged again soon. By the way, I understand it is quite common for people to drop out, come back, drop out, come back, etc.

Nope, but let's say it is a test requirement to put together an APRS station, under the guidelines and equipment that was available only up to about five years ago. It is NOT easy, and at that time everything had to wired yourself, or you could pay a much-higher-than-I-was-willing price--but for testing we'd leave out the order for the wiring harness. That is using a TNC, radio, GPS receiver, and we could even through in the computer for a full APRS station. Not easy. In fact, even with my much more technical husband on board, we still had to call to North Carolina and have a elmer

walk us through the way to do it! I'd have failed a ham test for
sure--wouldn't Dick and Larry and Dave just love that!

I didn't address space at all. I addressed Carl's sitting on an old
Tech ticket for 2 1/2 decades until the requirements were lowered.

> > > Now that Carl can share Dave's band space...
>
> > Carl may share some space with me.
>

> nevermind.

Carl may share some space. While the FCC permits Carl the same access
as I hold, no amount of wishing on his part will make it likely that

Carl will share space with me in some areas of the bands. If such did
come to pass, he likely wouldn't recognize that fact.

> There are plenty of areas on a

>
> Duh! I don't have Extra priv's, Oh Master of Amateur Radio!!!

Duh, indeed! I don't operate only in Extra Class band segments but I do
use morse about 50% of the time. I'm banking on not running into you.

> Go work some Frenchmen on 6M. I've heard they've got all kinds of
> priveleges!!!

French hams fall under the jurisdiction of the French PTT. I don't tell
them where they can operate and neither does the FCC. They are
responsible for the operation of their stations and I am responsible
only for the operation of mine.

I think they already have, and I think that's part of the reason why
MURS was created, thus putting no-license radio on VHF where it ought
to have been put in the first place.

>and try
>to take a little advantage of the situation.

On the other hand, there's no enforcement on the MURS frequencies
either. Around here (Buffalo, NY area) they already sound like the 11m
band, complete with illegal power levels and toilet-mouthed jerks,
many of whom can also be heard on 11m.

Then there's the marine VHF band...

You shoulda been at KIAG three years ago when a GU-11 got eaten by an F-117. Two Nighthawks came in. The first one ate a seagull as soon as he touched ground. The second one landed hard and broke something. They were both supposed to fly in that weekend's air show, neither of them did. The broken one spent the weekend in the hanger. The one with a B1RD in the engine spent the weekend on the taxiway, roped off with guys standing around it holding M-16s and trying their darndest to look like Steven Segal.

The land that the monitoring stations sat on was
sold off by GAO shortly after the stations closed.
Strip malls and subdivisions now stand on land that
was once occupied by the monitoring stations.

I want a lot of things from "society" that there's no chance in hell
that I will get. Learning to operate by the rules is a large part of
radio operating maturity.

You want to get into a discussion about who is qualified to
determine what CB is all about - the inmates or the keepers?
Hope you have your asbestos-lined teflon raincoat handy.....

>I personally have no want to bang my fist down on the table and proclaim
>that "that's not what it was originally meant for." That's what it's become,
>plain and simple.

CB was not meant to be hobby radio, despite "what it has
become". What it has become is something akin to a free-for-all
where each one does what s/he wants.....

>Don't like it? Then get your fmr. comrades to kick it up a
>notch or two wrt enforcement and stop it...

I've been in favor of that for decades.....we used to have something
called Special Enforcement Teams in the early 70s - "SWAT" teams for
CB enforcement. When they came to town the grass was mowed real
well. They were getting too close to certain Very High VIPs'
interests and they were disbanded, allegedly for budgetary reasons.
I would just as soon resurrect them.

I'd rather not get into the history of the pissing contest between
two now-deceased Bureau Chiefs over enforcement philosophy.

>or admit their boo-boo (CB on HF
>and they can't respond to a natuarally occuring phenomenon, hihi.) and try
>to take a little advantage of the situation. It reallly could've been a
>win-win situation back in 2000, Phil, but false pride got in the way.

As I've always said - wanna' work skip and DX -- get a ham license.
Wanna' use local personal or business communication - that's what CB
is for.

It comes down to wheher one is going to follow the rules or not.
Plain and simple.

>> What you are describing is hamming, not proper (some call it "legal") CB
>> operating.

>
>Yes, Phil, I think it's a GREAT idea to whet some CBer's
>appetite with the words "If you like what you can do with 12 Watts on CB,
>lemme show you what you with just a tad more effort and some studying on
>20."

Try "If you want to do all those things, the only place to do it
is in ham radio." CB is *NOT* the minor leagues or a training ground
for ham radio.

It's that simple.

>LB statewide, and their system will no doubt be destroyed if
>BPL is allowed to happen.

As I posted in another message, The Big Emm hasn't made Low-Band equipment for the last 10 years and except by cannibalization, replacement units are not available.

That's why we made the tests for Marin County about 5-6 years ago using T-Band trunking analog and digital on the interstitial channels - analog worked OK, digital (APCO 25) sucked big time for law enforcement needs. They still haven't gone to the new system because of NIMBY objections to site locations for both the transceivers and the microwave backbone (another project of mine that's going round and round in the courts). IIRC we did send a report in to APCO.

>We need to raise the
>issue of "homeland security" though with BPL. That's the
>hot button at the FCC right now that we can press.

I don't know -- the Commish just shot the ARRL in the a** over our objection to raising the Part 15 power level 10 db in the 24 GHz band (Amateur use - telecommand and data to/from amateur satellites. Commercial Part 15 use - wide-area wireless networking - more gadgets for the technical brain-dead).

Add to that OET's refusal to allow a 136 kHz amateur band "because it may interfere with Power Line Carrier data links".

Fortunately, the new Chief of the Homeland Security Division at the FCC is a good friend and protoge of mine, and although he is not a ham, he is a very well respected engineer/manager with his head on straight about national needs, so we may have a chance.

>Rick Tannehill, P.E. - W7RT
>Former Comm. Engineering Manager
>Ariz Dept of Public Safety (Retired)

Welcome to the land of the retired comm managers.... I have less "sitting around" time now that I'm retired then when I was "on the job" although I do a bit of both engineering and legal consulting from time to time just to keep current.

Isn't everyone "exposed" to voice and voice modes well before entering ham radio?
How many people ever are exposed to radiotelgraphy?

Which says a lot about the relevancy of code testing, even if you're
unable to look at it objectively enough to realize it.

As for people being exposed to voice modes, that must be why so many
phone ops sound like they have their microphone either at arm's length
or halfway down their throats, with no in between.

If you think it's nonsense, then tell me how these licensees, under 47 CFR
97.301(e) are supposed to show that they have met an international requirement
that no longer exists in order to have the privileges listed in that
subsection?
```

Seem s to be characteristic of you to get it exactly backwards, John. Morse code is a large part of ham radio, whatever your personal attitude toward it. As such it is a valid subject for proper learning and testing just as much as any part of the written test. Since it can only be learned by applied self study, and can't be said to be learned at all until a minimal level of skill is developed, thus the test is appropriate

Not really. Anyone can learn PSK31 in a half hour of looking over the help file and playing iwth their keyboard. As you know if you've been listening to all the laments appearing here from the "excluded", no such possibliley exists for Morse code.

Sure. Lots of amateurs have hired a crane to drop a M28 in their
basement.

Len has admitted a decades-long interest in amateur radio. Len
> has been posting here for over seven years. He hasn't acted on his
> amateur radio fanstasy in those decades and he hasn't acted on it in

> electrolyte.

That's so sweet. Its nice to know that one has to hold an amateur
license to be able to comment on amatuer radio. I can't decide who
points out that Len doesn't hold an amateur license more; you or
Steve.

The FCC office in Laurel, MD is where FCC
employees were caught in the act of running a child
pornography ring. FCC employees were using government
computers during official duty hours (while they were on the
public payroll) to run a cottage industry of child pornography.
It makes one wonder about the character of the persons the
FCC hires and how many more have yet to be caught.
Go here to read the FCC Inspector General's report, scroll
down to "Significant Investigations."
www.fcc.gov/bureaus/Inspector_General/Reports/sar398.txt

This is one item that was never the subject of a FCC press
releases.

'Zactly! I currently run a slightly older Uniden Grant XL, type certified
and 100% legal.

> But
> I think the CBers
> might see us as invaders on their turf, like we see them when invading
> 10m. It might be better

I usually keep it subtle and have always had pretty good results. NOTE:
Those who bootleg on 10m (Or any other ham band.) are neither included in
this discussion nor welcomed on either band. I'll drop a dime on them in a
NY minute! (...and have done so in the past.)

> maybe have the ARRL buy ads in CB magizines that say

IMHO, the ARRL blew a golden opportunity for a win-win situation in 2000
when it comment against RM-9807. I don't think the ARRL's is very much
appreciated among CB circles, HOWEVER, true CB "hobbyists" (Sorry, Phil.) DO
respect ARO's and are usually quite receptive.

> Without making ham radio look condensending or putting CBers down.

Funny story...well, kinda. I walked into the corner 7-Eleven and prepared to get my dailly fix of Java when a chap nodded in my direction and asked "you a ham?" It occured to me that he had seen my AR license plates and since we were the only two in the store, it was equally easy for me to notice the Wilson 1000 atop his vehicle. I nodded toward his car and asked him "what'cha runnin'?" Well, I could tell right away it wasn't kosher because you could cut the immediate cloud of nerousness with a knife. "Relax, I've been where you are and I can help you get to where you wanna be." Crash, down came the wall of apprehension. He was using one of those zillion channel Ranger rigs. I explained that if he'd let me, I could show him how to use that legally. Subtly massaged the enforcement angle into the conversation too. I lived three blocks away so I <permanently> lent him my Gordo Tech study guide and a copy of my ARRL code CD's. Told him the code test was nothing to sweat and if he any problems just give me a holler. Well, the next time he "hollered," he had two CSCE's in hand and a new Tech"+" was waiting for a call. Now that he's tasted more bandwidth, he doesn't want to risk losing those priviledges on any illegal 11-meter frequencies anymore. I personally don't care what his motivations are to fly straight are, I'm just glad that he is. Sure, I could've immediately beaten him up re. his rig or lectured him on what CB was originally intended for...but what would it have gained? CB gained a legal op, and he gained a whole new world of radio. For all I know, he might very well be an Extra by now. I do know it felt good. :-)

> I'm
> not that
> good a writer, but I think that it could be done well.

I think you just did a great job.

Have they? The guys I've known who owned them just carted them in.
I don't know anyone who uses a Mod 28 now. Loads of people were giving
them away a decade or so back. I know one fellow who turned the cabinet
of his into a bar. His wife wasn't as fond of it as he was. Think
there's a Mod 28 in the Anderson home communications center?

Nothing has prevented Len Anderson from commenting here. He has been
doing so for better than seven years. No one is required to agree with
him or to remain silent while a man with no experience in amateur radio
attempts to tell licensed hams how amateur radio should be shaped and
regulated. No one is forced to remain mum while he takes potshots at
the ARS, radio amateurs or the ARRL.

> I can't decide who
> points out that Len doesn't hold an amateur license more; you or
> Steve.

I'll let you work that out. It doesn't matter to me and I'm sure Steve
isn't in competition with me on the issue.

Could be? Don't you know? If you don't, you're just blowing smoke.

> >> I can ask people in that photograph if they are interested in

So you don't know.

> Just look at the majority of activities. Not one has been a homebrew activity
> since I joined the clubs.

I note that it is now "clubs" rather than "club". How long have you
been involved? What interval do you consider acceptable between a
club's group homebrewing projects? Should there be a constant stream of
such projects or do you find it acceptable that such projects take place
from time to time?

> Yet, currently that photo is shown. This seems like
> some kind of misrepresentation.

I'm sure it seems that way to you. You're the guy who maintains that
hams aren't interested in things technical, don't homebrew, are all old
and all fat. From what you've posted here over the past few months,
amateur radio has been a bitter disappointment to you.

> I could ask a few people in the photo if they like homebrewing. Then, I could

Fine. Let another club member (not you) show them around so that the
non-ham has a fighting chance to comprehend just what amateur radio is
and what a hamfest is all about.

> >You begin with false assumptions and attempt to
> >prove them to be true.
>
> I didn't begin with any assumptions. I noticed these things at Hamfests.

Yes, you did. You've continued to hold those beliefs despite your
having been corrected on numerous occasions by those who have much more
experience than you. Quite often your stories end with you being
shocked by what passes for American culture, you being disappointed that
no one in a radio club wants to do what you want, you being dismayed
that hams set out for an operating activity and then waste that time by
operating or you being under the impression that your travel to a
domestic location was a "DXpedition". You seem to think that you are
just a normal guy in a sea or weirdness. Don't you find that peculiar?

Ahhhhhh....So now this happened BEFORE you were in the club...So
what you ahve been doing all these many months is whining about
something that SUPPOSEDLY happened before you were even there.

So what you have is NO FACTS and an uninformed OPIONION as to what
MIGHT have happened...?!?!

> Just look at the majority of activities. Not one has been a homebrew activity

YOU are "too weird", Vipul.

And without some form of identification of whom you are alleging
these acts against, all we have is your "word", and so far your word
and your "facts" have been less than adequate.

> >> It won't do much good to show them the other aspect that

Phil is correct. Dig around the FCC's web site and you'll find more on the subject if you look hard enough. The FCC/WTB is now using the National Automated Monitoring Network, central office in Laurel/Columbia Maryland. The Spectrum Enforcement Division in Maryland operates the new remote monitoring system, which replaced the old monitoring stations. The locations once used by those monitoring stations now appear to be used to house the new unmanned equipment.

Actually, my comment was a joke, Phil. Notice the "wink face" after that paragraph. But, you're right - the FCC does depend mainly on complaints. In many cases (VHF, local issues, and so on), there isn't much else they can do.

Read my reply to the other stupid ass that has difficulty
comprehending standard English. There are NO MORE
MONITORING STATIONS!!!!!!!!!!!!!!!!!!!!!!!!!!!!
The land was sold off by GAO to developers. What you
are confused about are the satellite systems run by other
agencies. It is explained very clearly on the FCC web page.
And when are you going to FINALLY upgrade from that
no code tech license you have?

K

If there is supposed to be so much official monitoring going
on, how do you account for the quantum leap of pirate & other
unlicensed broadcasters on HF freqs, especially in the
aeronautical bands? Also, truck drivers are all over the HF
freqs. now, including aero bands. A few years ago this was
unheard of! Plain truth is the FCC is out of the monitoring
& enforcement business! Permanently!

Bob

Sure it is. Whether it's a sufficient reason is a matter of opinion.

> It might be a reason for
> using CW if we were that short of spectrum, which IMHO we're not.

Whether or not we're short of spectrum depends on a lot of things. In
the next few years, as the sunspot cycle continues to decline, we're
going to see many of the higher HF bands become essentially
line-of-sight for much of the time. Particularly winter evenings, when
many hams want to operate.
>

Sure it is.

> That's like saying if
> you shouldn't have to learn basketball to play poker then you shouldn't
> have to learn to read to become a journalist.
>
That's not even an analogy! ;-)

The argument

"why test for code in order to use 'phone"

boils down to/is a subset of the larger argument

"why should I have to demonstrate that I know how to do A
in order to be allowed to do B,

when I already know how to do B,
and knowing how to do A has, at most,
only a very minor effect on how well I do B?"

Knowing how a modern, manufactured, very-few-if-any-adjustments ham rig works has, at most, only a very minor effect on how well someone operates that rig. Sure, many hams (including me) are very interested in what goes on behind the front panel, and a few of us (including me) actually design, build, repair and adjust our own rigs. But all of that is by choice, not requirement.

A ham needs to know where the bandedges are, and how wide his/her signal is, in order to stay inside them. That does not mean every ham must know, and be tested on, how a DDS synthesizer works (as just one example). Yet hams have to pass written tests full of stuff like that, which has little or nothing to do with operating a manufactured rig which may not even have a DDS synthesizer in it.

Doesn't mean we should dump or strip down the writtens. But we do need to realize that the above argument about "why should I have to do A..." can apply in all sorts of ways to the written tests.

73 de Jim, N2EY

> that I will get.

Phil, what are we talking about here? By supporting the change of a rule via proper and legal protocol, am I really asking for something unreasonable? The Morse code requirement for HF AR is a recent hot issue. One of the most common statements I've read in support of its deletion is that "change is inevitable." I may not agree with the removal of Element 1, but I can't argue that all change is bad. I, for one, am not so afraid of change that I'll allow false pride override common sense.

> Learning to operate by the rules is a large part of
> radio operating maturity.

I agree. Is it your contention that changing, or attempting to change, a rule via the proper means is somehow a violation of sorts?

> You want to get into a discussion about who is qualified to
> determine what CB is all about - the inmates or the keepers?
> Hope you have your asbestos-lined teflon raincoat handy.....

"Inmates, keepers," Phil?! Are you kidding me? Let's stop and consider just what we're talking about here. This is what I'm in favor of.

1. The return of CB licensing. No test, but some accountability and enforcement. (...from said licensing proceeds.)
2. A written test with the 43 required Morse code characters in didah or .- format on one side and a random lettered listing of their written counterparts on the other. Ex.

1) -. ___ a. E
2) --- ___ b. Period
3) --.- ___ c. T
4) . ___ d. N
5) - ___ e. O
6) .-.-.- ___ f. Q

and so on...

Rote memorize the 43 characters, pass the test with a score of 70 (I'd prefer 85.) or better and receive and endorsement allowing you to work DX on channels 36 thorugh 40 USB at 12 Watts P.E.P. Yes, Phil...it IS that simple. Now if they'd just keep Element 1. :'-(

Further on the subject of "inmates" and "keepers," Phil. You're displaying a mentality that I've had the displeasure of witnessing over many years, having grown up in a law enforcement family...the us vs. them mentality. NOT "inmates," Phil...citizens. NOT "keepers," civil servants. It's easy to forget that when you worked for the FCC, you worked for "we the people." I don't believe I'm supporting anything harmful of subversive in what I've outlined above and the FCC admitted that they're aware that the majority of CBers support the removal of the 155.3 mi. limit. I personally don't think it'll ever happen and if the Morse code requirement is truly dropped in the USA, it'll likely become moot. That precious distinction you mentioned earlier may just become a little more blurred. The win-win opportunity was lost in 2000 and will likely not present itself again.

> >I personally have no want to bang my fist down on the table and proclaim

Enforcement! Where's the beef? Additionally, not ALL CBers are participants of said "free-for-all." I earned my GROL long before my ham tickets, but my exposure to CB is what picqued my interest in two-way communications and subsequently, AR.

>

> As I've always said - wanna' work skip and DX -- get a ham license.
> Wanna' use local personal or business communication - that's what CB
> is for.

Thats what CB was for and continues to serve as. There's no good reason why folks can't respond to a naturally occuring phenomenon when the band's open, especially when the majority of that "constituency" favors it. We're not talking about knockin' over convenience stores or driving 75 on city streets here, Phil. It's common sense.

> It comes down to wheher one is going to follow the rules or not.
> Plain and simple.

Rules can be changed, and quite frankly...it's the American way. It's called democracy. If I really believed it was harmful, (Other than to some false pride.) I surely wouldn't support it.

> >> What you are describing is hamming, not proper (some call it "legal")
CB
> >> operating.
> >
> >Yes, Phil, I think it's a GREAT idea to whet some CBer's

> >lemme show you what you with just a tad more effort and some studying on
> >20."
>
> Try "If you want to do all those things, the only place to do it
> is in ham radio."

It's been tried and it's not all that successful. Besides just what are "all those things" you're talking about? I'm only discussing one.

> CB is *NOT* the minor leagues or a training ground
> for ham radio.

I stand here as living proof to the contrary and I assure you, Phil...I'm nobody's lid. Not to blow my own horn, but I'm courteous OTA and in-person, convicted in my beliefs, concise in expressing those beliefs, quite open to changing my mind if shown wrong and admitting so, fairly well educated and am both a CBer and an ARO. I have nothing but respect for other's opinions and beliefs and I surely hope you understand that my disagreement with you re. this subject should not be construed as any lack of respect.

> It's that simple.

Stay tuned. (Pun intended) :-)

You know, Ryan...I've been very very fortunate in that I've rarely
encountered the hordes of lids on the CB. I'm usually on ch. 38 LSB or ch.
40 USB and most folks I've had the pleasure of chatting with have been
pretty good ops. (By AR standards.)

>
> I think they already have

Nah, you'll get all kinds of excuses wrt how unwieldy and expensive VHF gear
would've been back in 1958. But you know what...the manufacturers would've
worked that ou and historically ALWAYS have. That really wasn't the FCC's
job, it was, and still is, the job of the manufacturers.

> , and I think that's part of the reason why
> MURS was created, thus putting no-license radio on VHF where it ought

Enforcement? Where's the beef?! Oh, it went to pay for that $400 hammer or
that $1,200 barracks toilet bowl.

> Then there's the marine VHF band...

Ouch, low blow! ;-)

Amateur Radio Newsline™ Report 1355 – August 1 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

Amateur Radio Newsline report number 1355 with a release date of Friday, August 1 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio helps solve a murder by tracking down one of its own. Get to know about the ham radio heroes involved in the hunt for a cop killer on Amateur Radio Newsline report number 1355 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT OF A DIFFERENT KIND: AMATEUR RADIO HELPS HUNT HAM WHO KILLED MICHIGAN COP

Hams in Michigan were called on to help track down a cop killer after what should have been a routine arrest became a grusome homicide scene. It happened on July 6th. Amateur Radio Newsline’s David Black, KB4KCH, is here with the rest of the story:

--

Never in Michigan's ham radio history has there been a case like Scott Woodring's. It began July 6th. That's when Woodring, KC8JNG, a member of the

Christian Identity movement and described as a survivalist, shot and killed a Michigan state police officer. It happened while Woodring was being arrested for solicitation of a minor.

A stand-off ensues and lasts nearly a day. During a law enforcement shift change, Woodring manages to escape, triggering an extensive manhunt throughout western lower Michigan. That's when ham radio operators became involved, since it was suspected that Woodring had been using amateur radio equipment to communicate with other members of his group.

James Wades, WB8SIW, is Michigan's RACES Officer and Section Emergency Coordinator:

--

Wades: “I directed the EC for Newago Co. to establish an intercept peratio in the area and monitor seldom used frequencies in and about he VHF 2 meter band. And, additionally, we sent out a broadcast nouncemnt to selected areas to selected area RACES members thrughout Michigan, essentially asking them to listen for conversations between Mr. Wodring and whomever else he might speak with.”

--

That paid off. A ham in Holton, Michigan reported monitoring Woodring and another operator talking on the air. The intercept was reported to state police they then asked government agencies including the FCC to provide direction finding assistance to find Woodring. But it was a Friday night and police couldn't get any response from the federal agencies. So Wades says investigators turned to radio amateurs for help:

--

Wades: “We deployed amateur radio teams from several counties in the area, and had pretty much a continuous radio direction finding occurring throughout the weekend, with teams from from Kent, Ottawa and Musquogen Counties. We also had teams on standby in Kalamazoo County as well as the Civil Air Patrol team – which weren’t utilized, but it was reassuring to know that they were there”

--

Hams and the police knew the general area where Woodring was believed to be hiding. Wades says it was an eyewitness who ultimately led to Woodring being found:

--

Wades: “Mr. Woodring was discovered through a tip from a citizen who saw him essentially taking shelter in a non working vehicle. When Michigan state police officers approached, he leveled an assault rifle at them and he was subsequently shot to death when he refused t comply with orders or lower the rifle.”

--

Wades says police were hesitant at first to work with radio amateurs. But he says the hams' efforts made a powerful and positive impact with law enforcement agencies.

--

Wades: “When all was said and done the feedback has been incredabally positive. Tremendously good comments about the professionalism and the skills of the radio amateurs involved. And basically I think that they were somewhat – almost shocked at the capabilities and the skill level of our ARES and RACES members in Michigan, which, of course was highly complimentary”

--

Around 40 radio amateurs took part in the effort to help find Woodring. Wades says the hams involved coordinated their work with police carefully, even establishing a dress code for hams reporting on scene with investigators. The professionalism Michigan hams showed has given law officers a new appreciation for the kind of help radio amateurs can provide when it's needed.

From Birmingham Alabama, I’m avid Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

In all, RACES members provided 494 staff-hours to the man hunt. Most of this was contributed during the 36-hour period when radio direction finding activites to locate Woodring were being conducted. (ARNewsline(tm) from lead provided at www.qrz.com)

**

THE FIGHT FOR OUR SPECTRUM: HAM RADO VS. BPL

If you think that the term Broadband Over Powerlines and its acronym BPL will never afect you, guess again. BPL could effectively spell and end to ham radio as we know it. This, if it is ever approved by the FCC and popularized across our nation.

Just how real is the chalange to the survival of the Amateur Radio Service? ARRL Southwestern Division Director Art Goddard, W6XD, gave some graphic details at last weeks Fort Tuthill Hamfest in Arizona based on test data collected by Ed Hare, W1RFI, of the ARRL Lab:

--

Goddard: “If you are an engineer, anywhere from 33 to 63 decibels increase in the noise level thatr you will see at your reciever due to BPL run in the power lines in your neighborhod. If you are into S-Meter readings, thats somewhere between an S-6 and 10 over S-9.”

--

For those unaware, Broadband over Powerlines is a scheme to give consumers and businesses high speed Internet connections using the existing power distribution grid. This would put the power providers in the position of also being broadband internet providers as well. The problem is that powerlines are not shielded. They will act as much like giant antennas as they will a closed carrier of the broadband connection. In other words, whatever is on the power lines will be radiated and heard by your ham band reciever. And Art Goddard says that the Broadband Over Powerline signals will occupy the spectrum from 2 through 80 MHz, meaning every band from 75 meters through 6 meters will be affected.

According to Goddard, BPL has the backing of the White House which views the increased use of unlicensed devices as being good for the U-S economy. He also notes that the FCC – which is supposed to be neutral and regulating in the public interest, is – in this case -- actng like cheerleaders for the proposed service.

Goddard says that this is an issue that the ARRL is keeping a very close eye on. He also indicates that the League may soon be asking ham radio operators to lend their voice in opposition to BPL. (ARNewsline(tm))

**

RESTRUCTURING: NCVEC FILES TO END CW TESTING IN THE USA

The National Conference of Volunteer Examination Coordinators has filed a Petition for Rule Making before the FCC to end Morse testing in the United States. In its July 29th request, the NCVEC asks the FCC for an immediate end of CW testing of applicants.

The NCVEC request is based primarily on the action taken in Geneva at last months World Radiocommunications Conference. At that time, Morse testing as a world standard was abolished, leaving it to individual nations to decide whether or not to continue to administer CW exams.

The NCVEC petition concurs with the WRC findings. It notes an appearance that most of today’s radio amateurs want to communicate using voice. Because of this, the NCVEC says that it makes no sense from a regulatory standpoint to require hams to be Morse proficient when the greater majority of radio amateurs show no desire to use the mode. The petition also notes that the future of the hobby now encompasses many new modes that were undreamed of only a few short years ago. It adds that while manual telegraphy is a noble part of Amateur Radio’s past, it is no longer the services prime emission mode.

The NCVEC approach will still requires all applicants for an Amateur Service license or upgrade to pass the current written exams. Only Morse testing would be eliminated.

As we go to air no Rule Making designation has been assigned to this request by the FCC. The full text of the petition can be found on our website at www.arnewsline.org (ARNewsline(tm) from NCVEC release)

**

HAM RADIO TESTING: QPC RECALLS QUESTION

Also from the National Conference of Volunteer Examiners Coordinators word that its Question Pool Committee of has withdrawn question T5B04 from the Element 2 Question Pool. This, effective July 27th. This question is withdrawn due to the changes in Part 97 of the Amateur Service rules dealing with the new 60 Meter amateur allocation. (NCVEC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WR9ARC repeater of the Riverland Amateur Radio Club serving La Crosse, Wisconsin.

(5 sec pause here)

**

HAM SPECTRUM: ARRL & CQ PRESENTS A PRIMER ON 5 MHZ

And speaking about 60 meters, want to know just about everything there is to know about how to operate legally in this new 5 MHz spot frequencies? Walk, run or drive to your news stand and buy a copy of the August issues of both QST and CQ Magazines. Then go home, settle down and read the articles titled 60 Meters Frequently Asked Questions by Rick Lindquist N1RL and Ed Hare W1RFI in QST and Getting Ready For 60 by Gordon West, WB6NOA. Both are a wealth of information on how to approach this rather specialized allocation and handily compliment one another. We asked Gordo to explain what readers will find in his:

--

West: “One of the things that my CQ Magazine article talked about was the Amateur frequencies And tuning in. There was allot of confusion about what exact frequency one uses for upper sideband on the 60 meter band. As long as everybody remembers that 60 meters – 5 MHz – point 5 -- all of the upper sideband frequencies end with point 5.”

--

And why did her write the article?

--

West: “When I first heard about the band it immediately came to mind as channelized operation that many new hams are not used to. Well, growing up on 10 meter FM as well as 6 meter FM, I knew what channelized operation was all about. And the key word is “sharing.” There’s no QSY'ing – at least not easily on the 60 meter band beyond the 5 channels, so its going to be up to all hams to sort of take turns in using this exciting 60 meter – 5 MHz band.”

--

Where Gordon takes the story telling approach, Lindquist and Hare present their material in pure Question and Answer form. A style of writing that computer

enthusiasts call a FAQ. That's an acronym for the words "Frequently Asked Questions" and the answers that they provide is fact filled, precise and right to the point.

Taken together, "60 Meters Frequently Asked Questions" and "Getting Ready for 60" are the most complete operating guide for the 5 MHz band penned to date. Hams contemplating operation on the five channels that make up the 60 meter allocation would be well advised to read both before hitting the transmit switch.

For more information about subscribing to CQ, visit www.cq-amateur-radio on the world wide web. You can join the ARRL, support its work and begin receiving QST by signing up at www.arrl.org. (ARNewsline(tm))

**

THE WAR ON TERROR: TWO HAMS KILLED IN IRAQ

Two recent casualties of the war in Iraq were amateur radio operators, one American and one from Sri Lanka. The ARRL Letter reports that Specialist Jon Fettig, KCZ0HSQ, of Dickinson, North Dakota, was killed in an ambush on July 22nd.

The following day, Nadisha Yassari Ranmuthu, 4S7NR, an International Red Cross aid worker, was killed and his Iraqi driver was wounded after their vehicle, marked with the Red Cross emblem, came under fire south of Baghdad. Ranmuthu was 37 and well-known in the Sri Lankin ham radio community. (ARRL)

**

ENFORCEMENT: HAM TOLD HE MUST RESPOND TO FCC QUERRY

A California ham has been told that he had better respond to an earlier FCC letter to him regarding a pair of uncoordinated repeaters that he allegedly operates. Otherwise it could cost him his ham ticket. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The Enforcement Bureau has sent a warning letter to WA6SEK, Thomas De Lasaux, of Stockton California, concerning uncoordinated repeaters on 224.660 Mhz and 441.275 Mhz. There has been no response to a letter of May 5th where he had 20 days to reply. He is being afforded an additional 20 days to respond."

--

According to Duckwoth, if there was no resolution by July 25th, the agency planned to initiate enforcement action against WA6SEK's Amateur Service license. Its now past that date and we are awaiting word from the FCC as to wheter or not De Lasaux has filed the required reply. (FCC, RAIN)

**

ENFORCEMENT: TRUCKING COMPANY WARNED ABOUT UNLICENSED 10 METER OPERATION

Also receiving a letter from the FCC is the Tidewater Transit Company, Inc. of Kinston, North Carolina. This one warns the company to stop using the 10 meter ham band for its communications or face some rather severe consequences.

In his letter to Tidewather, the FCC's Riley Hollingsworth notes that information before the Commission indicates that a 2002 Volvo truck belonging to Tidewater and bearing North Carolina license plate LK 4130, was the source of radio transmissions on the Ten Meter Amateur Radio band on July 8th. This while it was driving on Interstate 20 near the city of Lexington, South Carolina.

The Letter warned Tidewater that continued unlicensed operation could bring with it a fine of up to $10,000. The owners of Tidewater Transit were also instructed to contact Hollingsworth to discuss the matter with him. (FCC)

**

RESCUE RADIO: HAMS TO THE RESCUE AS CELL PHONES FAIL

Interlinked emergency repeaters played a key role in providing communications during the recent Arizona wildfires.

As learned at last weekends Ft. Tuthill Hamfest, radio amateurs in Navajo County set up repeater links to allow contact between the Red Cross communications center and a number of evacuation sites. This, after it was found that cellular telephone coverage across the area was inadaquite.

The hams stepped in when the walkie-talkie feature of the cellular telephones failed to operate as advertised. The reason appears to have been the small number of relay sites available in the isolated areas where the fires were burning.

The hastilly assembled Amateur Radio relay system along with existing high level Amateur service repeaters are reported to have performed flawlessly. This made possible an ongoing exchange of vital evacuation information. (ARNewsline (tm) from information gathered at Ft. Tuthill Hamfest)

**

RESCUE RADIO: E-911 KIND OF ON HOLD

A lack of funding from cash-strapped state and local governments appears to be slowing the rollout of enhanced 911 services. And in some areas it has put the new wireless emergency phone location service on what appears to be an indefinite hold.

--
Under FCC regulations, wireless companies were required to respond to 911 center requests within six months by providing technology that can locate any individual on a given wireless phone networks who is using a phone equipped to gather information from the global positioning satellite system. This technology lets emergency operators locate cell phone users in need of assistance, but only one in ten emergency call centers has access to it.

But John Melcher, who is the president of the National Emergency Number Association says that moneys earmarked for Enhanced 911 are being spent on other needs. In a recent press statement Melcher charged that some states have diverted millions of dollars
in Enhanced 911 funds collected from consumers and have used the money to subsidize budget shortfalls. This says Melcher puts the public in danger, adding that moneys earmarked on customer billing for Enhanced 911 services should be spent only on Enhanced 911 and nothing else.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC set specific deadlines for implementing this new service back in 1966. To date, many providers have yet to meet that implementation goal. (Published news reports)

**

RESCUE RADIO: THE INTERNATIONAL AREN NET

Still with rescue radio and emergency communications news, word that the Irish Amateur Radio Emergency Network takes to the air for its regularly scheduled drill session the first Tuesday of each month. The net is at 21:45 local Ireland time. Thats pretty close to UTC, with the net operating on 7 point 043 Mhz on SSB. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: WI-FI SPEED INCREASED 4X

The most widely used wireless local area network protocol, IEEE Standard 802.11, also known as Wi-Fi, was extended last month to make it four times faster. The CGC Communicator reports that the new standard, IEEE 802.11g transmits data at up to 54 Megabits per second. Thats up from 11 megabytes per second as was called for in Wi-Fi standard 802.11b. (CGC Communicator)

(DO NOT READ: CGC)

**

INTERNATIONAL - ASIA: NON HAMS INVADING THE 7, 10 AND 14 MHz HANDS

The increasing use of more frequencies on various ham radio bands by the Indonesians and other South East Asian non amateurs for their personal or business traffic, is becoming a very serious problem. Q-News reports that the

Indonesians are using the lower 40 kHz of 40 meters, and frequencies around 14 point 100 MHz in the 20 Meter band most of the time.

Nor have they spared the 10 MHz allocation. There unlicensed oprators are regularly heard in the 10.0 to 10.1 MHz segment which primarily carries international air traffic control communications.

Q-News notes that this is a very serious situation. One which could endanger the lives and safety of air travelers in ITU Region 3 and a situation that needs to be to be dealt with quickly at the highest levels of international diplomacy. (Q-News)

**

INTERNATIONAL - UK: BBC HELPS THE BLIND

The British Broadcasting Company is playing a crucial role in developing new radio equipment that could help increase number of visually-impaired people working at the organization. Across the UK, BBC local radio stations are converrting from analog to digital equipment. The digital equipment is designed to make life easy for full-sighted broadcast journalists, using a visual touch-screen system, which is why it needs to be adapted for visually-impaired people.

Now comes word that Claire Jennings, who is the the BBC’s Disability Advisor for Technology, has been working alongside technology company Calrec. This, to design a digital radio broadcast mixing console that is user-friendly for visually-impaired radio producers

The BBC has spent the past few months working with Calrec to adapt the broadcast desk and with BBC Technology to extend the touch-screen control system so that it can convert text into speech and be controlled using a standard keyboard. As well as controlling sources to faders on the Calrec, the BBC system can control most other hardware in a similar manner.

The entire story may be found in cyberspace www.bbctechnology.com/newsarchive4.htm. (Media Network)

**

SPACE: NASA TEAMS WITH LOCAL LIBRARIES TO DELIVER -- SPACE

NASA and the American Library Association have partnered to create a one-of-a-kind interactive space research exhibit. This, as part of a new program called NASA @ your library.

The unique exhibit will tour 120 public libraries in five regions across the nation for the next two years. It will feature special presentations specifically created to expose people of all ages to NASA research in the areas of health, home and transportation, agriculture and environment, and commerce.

The program was recently launched at the Enoch Pratt Free Library in Baltimore. NASA @ your library was created to inspire more participation at public libraries, raise awareness and encourage interest in science. (NASA)

**

CONTEST CALENDAR: FISTS C2C IN SEPTEMBER

Mark September 13th and 14th on your calendar for the third outing of the annual Fists Coast to Coast contest. This year the contest will run a full 24 hours beginning at 5 P.M. Pacific Daylight Time on September 13th and concluding at 5 P.M. on the 14th. That corresponds 0000 to 2400 UTC on September 14.

This year the rules are easier to understand and the sponsors say that there is the potential for higher scores due to the use of multipliers. The URL for rules and awards is complex and appears in the print edition of this report. If you have questions, please e-mail them to Paul Beringer NG7Z at fistsc2c@yahoo.com. On-line information is at www.tomochka.com/k7fff/fnw_c2c03.html. (FISTS)

**

DX

In D-X, word that two separate groups will be operating from Swaziland through the 3rd of August. K4SV and VA7DX will be active as 3DA0SV and 3DA0WC. Four South African operators will be on as 3DA0DX between the same dates. QSL each group as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ARNEWSLINE TAKES YOU TO A HAM RADIO BALLON LAUNCH

And finally this week, take a listen to this:

--
“15,790 feet. Course 44 degrees moving at 10 miles an hour.”
--

That’s the report of one of the controllers tracking a high altitude ham radio balloon launch that took place Saturday, July 26th at the Fort Tuthill Hamfest just outside of Flagstaff Arizona.

The launch was sponsored by hams belonging to Arizona Near Space Research. Brian Bingham is a Physics teacher from Deer Valley High School in Glendale, Arizona, who came out to take part in the launch. He says that many of those assisting are also educators who want to bring space a bit closer to their classrooms:

--
Bingham: “Most of the people you see out here helping are that group and a group of Arizona high school teachers that are going to be taking on some of the balloon launches. They will have teams from their schools do balloon launches through the NASA Arizona Space Grant.”

--

Bingham, who was a radio amateur many years ago described the system being readied to be sent aloft:

--

Bingham: “You can see a small package down here. It was built by one of the teams from a workshop and contains temperature sensors, humidity sensors, a small still camera, solar cells all in something just a little over a pound in weight. It has telemetry equipment with GPS position via satellite and transmits it back so that we an track it on the ground and recover the equipment.”

--

And how high will it all go?

--

Bingham: The balloon will go up to somewhere in the neighborhood of 100,000 feet. The balloon will also swell to somewhere about forty feet in diameter before it finally bursts. And then the parachute will bring it back down to Earth.

--

Brian Bingham says that his students will soon be choosing a project of their own to launch to the edge of space on a future balloon flight. It will be another educational experience made possible through the cooperative efforts of NASA, the educational community and ham radio. (ARNewsline(tm))

> either CW/Morse, voice, or a data mode?!

Yep. And it wasn't even a net-based test, just a simple "pass a formal
message test", which is even simpler. (I like the net idea, btw).

> Geeze, that is whining! Because I
> don't have a problem with that at all. In fact, even if the CW test hangs
> around, I think the presentation of it ought to be in net format. The
> questions could be something like, "who was the net control station," etc.

Yup.

The idea can be expanded to multiple levels, too. Start out with a
simple, short message and a "net" composed of maybe the NCS and person
being tested, excellent conditions, etc. Higher levels involve
increased complexity.

And I'll tell ya, if ya really wanna see CW in action, follow a
traffic net where the ops have full hooks and know what they're doing.
I recall one Xmas-season session of EPA where I was NCS and the net
passed 42 messages in standard ARRL format. The session lasted 30
minutes.

> I understand that.

Long time ago (40+ years) you had to certify you had been on the air
for a certain number of hours to renew your license.

> I also understand there used to be requirement for
> upgrading with a certain amount of time.

That only ever applied to the Novice. 1951-1967, one year, 1967-1974
two years.

Most hams today do not remember those times.

> I know that is why there is such a
> population of folks who think it's an all-out sin to stay as a Novice, Tech,
> etc.

I'm not one of those. I encourage folks to upgrade, but not doing so
doesn't mean they are bad hams.
>
> BUT, the current requirements do not mandate that a licensee participate; so
> why have that as part of a scope for an amateur radio license? If the
> requirement for participation hours comes back, *then* include testing
> parameters that will measure a person's willingness, devotion...

The problem is that, for the good of the ARS, we need to be
self-policing. I've heard things on the 'phone bands that, if recorded
and played back at a WRC or to a skeptical FCC, would make it really
tough to defend the need for the ARS to have use of the spectrum,
rather than some other service. Or even to exist.

> > >> 3) The person has been exposed to a useful, widely-used-by-hams radio

> that measures the capability of one to conform to net standards. While nets
> all have different *styles* the standards are pretty much throughout.

Some would argue that (not me).

Didja know amateur CW nets use special "QN" signals to speed up
operations? Like "QNC - all net stations copy", "QNA - answer in
prearranged order", "QNX - you are excused from the net", and many
more.

> > My proposed message-skills test would have left the choice of mode up to
> > the person being tested. What could be fairer?
>
> Absolutely! I hope you don't think I'd have a problem with something like
> that?

I met with so much opposition when it was posted that perhaps I
expected it...

> ham radio (gentelmen's agreements, standard communication protocols, etc.)

That's a big part of what's important. I'd be really happy if all hams
did that much!

It's also important to actually get on the air and use the ham bands,
because no matter how many of us there are, or how advanced our
technology, if we don't use 'em, we lose 'em.

> While unpopular for ham radio, if someone doesn't take the time to "be

> of a few tragedies and people are going to get the idea that they need some
> independent study to be safe in what they do with ham radio.

Yup. And in other areas of life, licensing generally exists to protect
innocent others from someone's ignorance, not to protect people from
themselves. Example: The reason we have building safety codes is not
to protect people from hurting themselves in their homes, but to
protect their neighbors and visitors.

> No net

The fuss is on both sides. You passed Element 1 - was it REALLY that
much of a problem?
>

> are dumb.

I don't. I've met some pretty smart jerks.

Or rather, there are all sorts of categories of "dumb" and "smart". We
both probably know people who can hardly construct a coherent sentence

(which some might call "dumb") but who can fix or build anything with
great skill (which some might call "smart") etc.

Or to put it bluntly, we probably know people with multiple Ph.D.s
(which some might call "smart") who don't have the horse sense to come
in out of the rain.

> If CW testing is supported to the extent that to lose it is to

> comments; then isn't that an acknowledgement of the belief that, somehow,
> the CW test keeps all that from happening? Like I said, you and I know that
> it doesn't; but there are those who believe it does.

Every test has some effects. Whether those effects justify the test is
really just an opinion.

We will probably see what the effects of no more CW testing will be in
a few years.

Some of them are facts - see below.

>
> > >
> > >One would hope, Jim, that everyone realizes we post our opinions.
> >
> > We post both opinions and objective facts. The problem is that some folks
> > try to pass off their opinions as objective facts.

> I hope I don't do that. If I do, it is not intentional.

The point is that we all deal in both opinions and facts, and it's
important to keep them straightened out. Example:

Your hubby exists - that's a plain, simple, objective fact. Not
debatable.

Your hubby is a darlin', lovin' wonderful guy - that's an opinion.

It's debatable.

Of course for somebody who isn't married to him to debate that opinion
is pretty dumb, huh? ;-)

> whatever requirements there is currently when they are "applying."

That's part of it. I'd add:

"and who one comprehend, be familiar with, and employ the
Rules and Regulations from the FCC; and become familiar with the
"ways" of
ham radio (gentelmen's agreements, standard communication protocols,
etc.)"

(very useful quote, actually)

> Maybe
> it's only here, but I tell you I have seen more crappy people--those who
> would probably earn the title lid, cbplusser, etc.--get wiped off the air
> because of being ignored.

Self-policing at its best.

> Now, if the floodgates opened and there is not a
> testing structure of some kind, or a licensing structure of some kind, ham
> radio would certainly become a cesspool. Remember that CB radio used to be
> much better until the FCC relaxed regulations there; or, more to the point,
> quit enforcement opportunities there.

I don't know how far back your cb experience goes, but I have listened
there since the mid-'60s. Even back then, things were coming unglued.
The general cb culture (at least here in EPA/SNJ/DEL) by 1968 or so
was one of simply ignoring any rule or reg that the person didn't
like. Yes, there were some very nice people. I never got on cb because
of what I heard, and that culture.

(Montgomery Burns voice ON:)

Excellent!

(Montgomery Burns voice OFF)

> By the way, I understand it is quite common for people to drop out, come
> back, drop out, come back, etc.

Been that way since the beginning. Work, school, moving, you name it.
Even an active ham's involvement goes up and down. There were several
years when my entire operation was a 2 meter FM rig and Field Day.
Everything else was packed away.

> husband on board, we still had to call to North Carolina and have a elmer
> walk us through the way to do it! I'd have failed a ham test for
> sure--wouldn't Dick and Larry and Dave just love that!

HAW!

In some countries, prospective hams had to scratch build a receiver of
a certain complexity level, get it to work, use it for a certain
amount of time, and gather QSL cards from stations heard. Then the
prospective ham had to demonstrate its operation and explain its
design to a panel of examiners. Only after those requirements were met
would the ham-to-be be allowed to even take the code and written
tests!

In the UK, today, getting a ham license requires that you attend a
certified training course. Doesn't matter what your experience outside
ham radio is, the course is part of the exam process. There are maybe
50,000 hams in the UK and 650 active clubs. I don't think the UK is
even as big as Texas.

Imagine such things in the USA.

> > another advantage of CW...

They called it "glass arm" or "telegrapher's arm" back then, but it
was CTS. A keyboard and mouse are even worse for giving you CTS.

The FCC closed down all monitoring stations in 1996,
and turned over the land they sat on to GAO for disposal.
The FCC no longer has any monitoring or locational
capability. Today's FCC is only a paper pushing
bureaucracy, without any technical expertise.
Sorry if you can't deal with the facts, but that is your
problem and doesn't change the truth.

Ray

What purpose does that serve? The vast majority of the policy makers
at the FCC aren't licensed in the amateur radio service and have no
experience in amateur radio.

But I don't hear you complaining about that, yet they have the ability
to change what you do and how you do it.

Ray, can you explain to me why 47 CFR Part 0 Section 121 lists
14 locations for "protected" FCC field offices, including the
Canadaigua location mentioned above and the Laurel, Maryland
station mentioned in another post? The locations are protected
from RF emissions by licensed radio services *because* they are
FCC monitoring stations. Section 121 was updated in 1998, 1999, and
2002, so how can it be that these locations are still listed and
still protected if the monitoring functions there were discontinued
and the physical facilities disposed of in 1996?

Here is the list, coordinates included:

Allegan, Michigan
42[deg]36[min]20.1[sec] N. Latitude
85[deg]57[min]20.1[sec] W. Longitude

Anchorage, Alaska
61[deg]09[min]41.[sec] N. Latitude

150[deg]00[min]03.0[sec] W. Longitude

Belfast, Maine
44[deg]26[min]42.3[sec] N. Latitude
69[deg]04[min]56.1[sec] W. Longitude

Canandaigua, New York
42[deg]54[min]48.2[sec] N. Latitude
77[deg]15[min]57.9[sec] W. Longitude

Douglas, Arizona
31[deg]30[min]02.3[sec] N. Latitude
109[deg]39[min]14.3[sec] W. Longitude

Ferndale, Washington
48[deg]57[min]20.4[sec] N. Latitude
122[deg]33[min]17.6[sec] W. Longitude

Grand Island, Nebraska
40[deg]55[min]21.0[sec] N. Latitude
98[deg]25[min]43.2[sec] W. Longitude

Kingsville, Texas
27[deg]26[min]30.1[sec] N. Latitude
97[deg]53[min]01.0[sec] W. Longitude

Laurel, Maryland
39[deg]09[min]54.4[sec] N. Latitude
76[deg]49[min]15.9[sec] W. Longitude

Livermore, California
37[deg]43[min]29.7[sec] N. Latitude
121[deg]45[min]15.8[sec] W. Longitude

Powder Springs, Georgia
33[deg]51[min]44.4[sec] N. Latitude
84[deg]43[min]25.8[sec] W. Longitude

Santa Isabel, Puerto Rico
18[deg]00[min]18.9[sec] N. Latitude
66[deg]22[min]30.6[sec] W. Longitude

Vero Beach, Florida
27[deg]36[min]22.1[sec] N. Latitude
80[deg]38[min]05.2[sec] W. Longitude

Waipahu, Hawaii
21[deg]22[min]33.6[sec] N. Latitude
157[deg]59[min]44.1[sec] W. Longitude

Additionally, from

<http://www.fcc.gov/Bureaus/Inspector_General/Reports/sar997.txt>

we have the following assessment (as of late 1997):

The reorganization entailed the closure of nine attended frequency monitoring stations and three additional monitoring sites located at FCC field offices. In place of these previously manned stations, a national automated monitoring network is now controlled from an existing facility in Columbia, Maryland. Nine of the 25 existing field offices as well as three of the six regional offices were closed. Two technical staff members continue to be assigned as Resident Agents in the nine locations in which field offices were closed.

So lets see, of 25 field offices 9 were close, leaving 14. And an automated monitoring network is in use, for which there are 14 protected locations. Does this add up to anything like

"out of the monitoring & enforcement business! Permanently!"

or

"the FCC closed all their monitoring stations seven years ago"

or

"The FCC closed down all monitoring stations in 1996"

or

"and turned over the land they sat on to GAO for disposal"

or

"The FCC no longer has any monitoring or locational capability"

or is there by any chance a large amount of disinformation being relayed here as if it were fact?

OK, I'll bite.

What need did code testing serve in the past that does not exist
today?

Before you say "other services used it", note that many if not most
hams had little chance of ever being part of those other services when
they used Morse. For example, people over a certain age, or with
certain physical conditions, would never be accepted in the military.

It serves to point out Len's total lack of experience in the amateur
service.

> The vast majority of the policy makers
> at the FCC aren't licensed in the amateur radio service and have no
> experience in amateur radio.

The vast majority of policy makers at the FCC have nothing whatever to
do with amateur radio. Those that are involved in the regulation of the
ARS, are quite knowledgeable about the service. They are paid to know.
Additionally, there are radio amateurs on the FCC staff. That has
nothing to do with the issue of Len Anderson. He isn't a participant in
amateur nor is he a regulator of amateur radio. Len is totally
irrelevant to amateur radio.

> But I don't hear you complaining about that, yet they have the ability
> to change what you do and how you do it.

No, you won't hear me complaining often though there are times when the
Commission makes a decision which I don't like or which is just plain
wrong. Len makes no such decisions and is not involved in amateur
radio.

Please quote that "may share space" FCC document.
He's allocated the same frequencies. He may or may not share the same
space.

> > > While the FCC permits Carl the same access

>
> None whatsoever. But it takes two amateurs to make a circuit.

It certainly does. Two Frenchmen working each under fall under the
jurisdiction of the French PTT. A station in France working a station
in Tanzania is quite the different story. If the Frenchman breaks his
regs, it is up to the French authorities to discipline him. Maybe
they've contracted the job to some fellow in Ohio.

> > > I don't tell

Why are you intentionally working bootleggers?

It does? Is that why he's been using you for entertainment (and I
might add, providing others with great laughs) for how many years?

Seven??? And _you_ think it bugs him!

Dave gets out of bed every day and immediately hangs a target on
himself to help Len get a good aim...

Just cruise the bands at non-contest times and that is when you will find
the extended conversations.

Anything from an unidentified transmission to interference to jamming for
starters depending on the exact events. It probably violates a number of
FCC rules.

You are almost certainly misinterpreting their motives. They want to see people improve, upgrade, and otherwise develop their amateur radio skills and knowledge. It is in a benevolent spirit that they make these suggestions. For example, I have been through setting up digital modes on my system even though I don't care to use them. I've set them up and checked them out for the sole purpose of expanding my personal hands on knowledge. Once I had them working right, I was done using those modes.

If all you CBers with a ham license want to go back and play in the pig pen.
Then go ahead. Don't even think anyone that is a real ham cares what goes
on there. Let alone wants to operate there.

If you don't like that. Tough...thats the fact jack.

>Could be? Don't you know? If you don't, you're just blowing smoke.

I let my membership expire. Its not worth renewing. The way I could verify the info is to show up at individual events. I've done that and have trouble asking them the questions I want to ask. I could email a few in the photograph, but I only remember a few of their names.

I am pretty sure, that if I ask a few people from the photo if they are interested in a homebrewing project, they will either say they are not interested or too busy.

> Should there be a constant stream of
>such projects or do you find it acceptable that such projects take place
>from time to time?

If they are grouped in with other activites, that would be fine. These projects haven't been there at all.

>no one in a radio club wants to do what you want

Often true.

>you being dismayed
>that hams set out for an operating activity and then waste that time by
>operating or you being under the impression that your travel to a
>domestic location was a "DXpedition".

It was a vacation spot. I wanted to do some of the vacation activies. Yes, that the Hams did not do vacation activites (other than eating) did come as a surprise to me.

Your arguement dont hold water Bert. There was a CB band on UHF back then.
It was in the 400 mhz range FM and was called Class A.

I used to do the same thing with the customers I had in my CB shop a few years back. Got a LOT of converts that way.

But it was tough sometimes when they came in and asked me why the Swerrrrrrs were so high on their whup, when it was mounted with straps to the metal cab of the truck.

Read this link. It tells how the land the monitoring stations sat on was disposed of by GAO and how FCC employees ran up millions of dollars in fraudulent cell phone bills while they were closing the monitoring stations and selling off the land.

Kim keeps referencing all her friends that do CW. And what they tell her.
Hey Kim....here is an eye opener for you. CW ops actually to 'communicate'
Yes there is the wx reports, rig here is etc. But real CW ops don't bother
with that boooooorings stuff. We talk about everything under the sun.

Get you 'CW OP BUDS' :) to get their speed up around 40 and check out 7030
or so. There are some 'real' conversations going on.

Yeah, yeah, and some farmer raises corn on the New York Center site.

> All the monitoring stations have been dismantled.

No, no Sweetums, you don't know what you're talking about. Which
doesn't come as much of a shock. In most cases the station personnel
got "dismantled" when the stations were automated and placed under
remote control, that's all. Laurel is still staffed because it's the
biggest & baddest of the bunch. So yes indeedy Sweetums, the FCC is
definitely still listening, listening, listening . .

I can't urge you too strongly get a grip on the facts before you spout
off in USENET Sweetums else you make a complete ass of yourself again
like you just did.

> Do you
> understand standard English?????????????

Of course he can't. He's ONLY a multi-degreed EE/comms lawyer whod did
something like 30 with the FCC. Busted his share of pirates too by

golly.

Of course. The 'phone and data folks do the same - get the QSO and on to the
next, which is what contests are all about. DXing is similar.

CW ragchewing is a completely different game. Tremendous fun once you have the
skills and a decent rig.

And CW can offer a feature most other modes don't - full break-in, or QSK. The
receiving op can interrupt the sending op just by tapping the key. Great for
traffic handling, too.

>it should be obvious more violations will occur in those modes.

True to a point - but HF/MF usage isn't that much slanted towards 'phone. The
ratio of cited violations is far greater than the ratio of users.

And since enforcement is complaint-driven, FCC monitoring activity isn't a
factor.

>In addition,
>phone users exchange information at a greater rate when compared to CW >users

Some do. But in general, decent CW ops exchange info at a rate that is close to
that of people talking. Although the raw WPM is less, CW uses abbreviations and
prosigns, while 'phone tends to be full of pauses, redundancies and phonetics.

>and conversations occur more often when compared to data users. Both of
>these lead to greater opportunities for violations to occur. If all these
>differences were factored in, I suspect the differences in violations would
>be far less.

I don't think so. The worst I've ever heard on the CW bands was one ham calling
another a lid for tuning up and calling a DX station on the DX's freq after the
DX had clearly stated he was working split. The worst I've heard on the 'phone

bands I am too embarrassed to even describe.

It should be noted that the vast majority of hams behave very appropriately on the
bands, regardless of mode or license class. But it only takes a few bad apples to make all of us look bad.

Interesting. Of course, I never gave a hang for contests, but I recall the RPN (Rochester Peanut Whistle Net) that we had years ago. We met evenings on 15 CW. I'm trying to recall ... there was me (then WB2OSP), Tim WB2KAO (still has that call), Greg WB2GLK (now a 4 call and I'm not sure ... I'd have to look it up), Mike (WA2SEY now W2AV) and a couple of others. I can't imagine us getting on a bunch of evenings only to state rrr tnx fer call ur 5nn here in Rochester,, ny (heck, we were all from Rochester!). I enjoyed rag chewing, and preferred cw back then. When in the service, I usually split my operating around 1/3 ssb, 1/3 cw, 1/3 rtty. I used to talk via rtty with Norm, VK2NP, for hours on end. ssb and cw contacts were usually in the range of 15 minutes to half an hour. Even a cw contact for 15 minutes did consist of far more than simple weather, rig, etc exchanges as my cw contacts were fairly high speed cw (usually - although I did enjoy dropping into the novice 40 or 15 meter bands to give a few folks a chance to work something more than a couple of states away. Those were usually limited as you imply simply by the limitation of slow cw). The cw contacts close approached the limit of the rtty gear running a tape reader. rtty was 60 words per minute, too much for me, but at the time I had no problem putting 40 words per minute perfect copy on paper and 50 words per minute before I was struggling to copy it. Most of my contacts were between 30 and 50 words per minute cw. Come to think of it, a lot of voice contacts were just what you mentioned - signal, weather, rig, name, and - oh yes - *please* QSL.

Don't get me wrong; I don't care whether someone else want to learn code or not; I just don't care for a bunch of folks who want to blame it for their washing machines over-sudsing :) As far as carpel-tunnel, I never used a straight key (although I could send decent code to about 22 and shaky code to about 28 with one). A small amount of movement and the Hallicrafters HA1-TO keyer took care of the tough stuff :) A few hours of cw contacts never bithered me a bot.

Very true. Flames don't last long there at all. On one group, we had an individual post (roughly approximated here) " Too much F****** e-mail. Stop the F*** the e-mail". I edited out the obscenity, approved the edited post, and explained how to change his profile; the group owner, however, decided to take the initiative and stop his e-mail for him. Permanently! :) The groups I'm a member of generally have a number of moderators. In the one group I mentioned, we have coverage from England, the U.S. Eastern time zone, Canada Pacific time zone, and Australia. Some even check in from work during lunch. The Yahoo Groups tend to be good and folks have a good time. Intentional flamers tend to disappear very quickly.

Learn something about

1) citing links in a manner that make the accessable
2) reading what you cite *before* you cite it
3) making your summary *accurate* if you do summarize

You've failed on all of the above. The actual link is,

http://www.fcc.gov/Bureaus/Inspector_General/Reports/sar996.txt

It says *nothing* about land disposal by the the GAO, nor does it say a thing about cell phone usage related to the closing of monitoring stations.

What it does say contradicts your position and repeats *precisely* what I had said above:

... "the closure of nine attended frequency monitoring stations and three additional monitoring sites located at FCC field offices. This streamlining initiative has been implemented during this reporting period. In place of these previously manned stations, a national automated monitoring network has been established and will be controlled from an existing facility in Columbia, Maryland."

As you can see, claims that "The FCC no longer has any monitoring or locational capability" is absolutely refuted by the two cited references to FCC semi-annual reports. Both of them, the one I originally cited and the one you attempted to cite, say the exact same thing: The FCC now has a "national automated monitoring network" in place. They just as clearly have at least 14 locations, listed in the cite that I gave and deleted here as redundant, where these remotely operated monitoring stations exist.

The cite you attempted to make does say: "This report includes the major accomplishments and general activities of the OIG during the period April 1, 1996, through September 30, 1996...", where OIG is the Office of the Inspector General.

The OIG accomplishments and activities reported in that particular semi-annual review were one Special Review Report and three Audit Reports that were issued during the reporting period. The Special Review Report was related to support for frequency spectrum auctions. The Audit Reports were

1) Audit of Employee Use of American Express Government Credit Cards, issued August 14, 1996

2) Report on Cellular Telephone Utilization, issued August 15, 1996

3) Report on Audit of Proposal for Initial Pricing Under RFP No. 96-37, issued September 30, 1996.

Clearly you were not referring to items 1 and 3, which are not related to either monitoring stations, GAO sales or cell phones.

Item 2 is indeed related to cell phones, but has no particular connection to any GAO sales, as none are mentioned, and since it reports on cell phone usage between 1993 and 1995, it cannot be said to apply specifically to the deactivation of manned monitoring stations. In particular, it does not mention *any*

specific locations or activities or offices within the Commission as being singled out for either proper or inproper usage. It does say that proper managerial control was not in place and that abuses were found. However, none of the abuses found could possibly be related to the activities you claimed, because all were:

A sample of judgementally selected phone bills for FCC employees whose cellular phone bills consistently exceeded $100 per month over a six month period from January through July 1995, was reviewed by the auditors.

So, one just has to ask why you would post such a claim and then try to back it up with a cite that supports exactly the opposite of what you have said?

Did you even read it, or did you just expect that I wouldn't be able to find it?

So despite all the facts to the contrary, you cling to this
fairy tale belief there are still mythical "monitoring" stations?
First of all you need to realize that as a no code tech, you
really have no idea what is going on. Do you have a
grip on reality? No, I did not think so. Now run along
and go back to your CB friends, or better yet take all your
ravings to 14313, like hams do. You are a very strange
lad indeed!

Ken

A. If you claim to know so much, why do you post using
an incorrect path and headers?

B. You are confusing the issue with misquotes and half truths.

C. You really need to get a grip on reality!

D. Akabar Naazar Land Sales Conglomerate handled all
the land sales and disposal of the property which the
monitoring stations sat on. Did you not read his post?
No, I forgot, you cannot comprehend standard English.
Thanks for confirming my suspicions.

Kenny

Mr Neville,

Hams have nothing better to do than jam each other on
14313. But 20 meters has been closed the last few days,
so these idiots are on here teasing and trolling. Don't fall
for their crap. Everyone knows it is an established fact
that all the FCC monitoring stations were closed and the
land sold over seven years ago. The FCC has long been
out of the monitoring & enforcement business, especially
now that they have nothing to monitor with. Tomorrow
20 meters will open back up and all these idiots will be
back on 14313 jamming each other. Too bad these trolls
can't get a life.

Herb

Precise quotes and the full truth. If you think it was
otherwise, why don't you show where any quote I gave was wrong
in any way. And, show us a single quote from the cite you made
that in any way supported any claim you've made.

>C. You really need to get a grip on reality!

Such as that your posts are not credible.

If you can comprehend standard English, maybe you'll tell us why
the FCC continues to make semi annual reports that claim they
are operating a national network of monitoring stations?

There there my boy. Hold out another 24 hours and you can
get back on 14313 and jam your buddies, talk about imaginary
"monitoring" stations, or anything else that you fruity hams
do. In the mean time, there is always CB. Yes, why don't
you get on channel 11 and make noises, such fun, as you well
know.

Herb

I'd hate to hear you doing a play by play of a boxing match. You'd have
Len pummeling my gloves with his face.

> Seven??? And _you_ think it bugs him!

Seven, and I KNOW it bugs him.

> Dave gets out of bed every day and immediately hangs a target on
> himself to help Len get a good aim...

It's sheer agony being bested by those, "FIFTY YEARS AGO I was..." barbs
of Len's.

Did you go there with a radio club group intent on operating?

> I wanted to do some of the vacation activies.

Oh? Did the club plan vacation activities or did you just assume that
was part of the trip?

> Yes, that
> the Hams did not do vacation activites (other than eating) did come as > a surprise to
me.

Far be it from you to actually find out in advance what the group
planned to do. From my perspective, your time in amateur radio has been
one endless litany of complaints.

Are those the same "imaginary" monitoring stations that
Hollingsworth goes around the country talking about. He claimed
some three years ago that computer upgrades allowed them to do
about 1000 times as many Lines of Bearing samples as had been
previously done.

Of course, those _were_ imaginary back in 1995 when the ARRL
announced the soon to be built new remote monitoring system, and
quoted the FCC saying they would be an improvement,

The plan would close nine separate attended high
frequency monitoring stations, and three additional
monitoring sites within FCC field offices.
Technological advances permit the replacement of
these monitoring stations with a national automated
monitoring network by the summer of 1996, the FCC
said, and "overall, monitoring capacities will be
enhanced." One facility in Laurel/Columbia,
Maryland, will remain as the network central
station.

John:

Ooops. That's Larry Taft, not Larry Roll. I didn't know that Mr. Taft had
such a big chip on his shoulder!

>Beam us up, Scotty...there is definitely no intelligent life down
>here.

Apparently not. (Whirring sound, sparkley lights around the dematerializing
figures of Capt. Kirk and the landing party, then they disappear leaving the
scene full of sand, styrofoam rocks, and plastic foilage.)

Back aboard the Enterprise:

Scotty: So what'd you be seein' down there, Capt'n?

Kirk: The usual stuff, Scotty -- sand, styrofoam rocks, plastic foilage,
and KC2HMZ! Unfortunately, John was already brain dead, there was
nothing Bones could do for him.

Dr. McCoy: Damn it, Jim -- I'm a Doctor, not a miracle worker!

Kirk: Sorry, Bones. I know, he was beyond help!

Dick:

Yup. That's about what it took me to "learn" PSK-31. Of course, I had the
unfair advantage of having been a RTTY user for years prior to giving PSK31
a try.

>As you know if you've been listening to
>all the laments appearing here from the "excluded", no such possibliley exists

>for Morse code.

Yeah, that took about a week's worth of half-hour daily sessions to get me
up to the 5 WPM level. Then I got on-the-air, started making QSO's and
having a blast, and before I knew it, I had passed the 20 WPM code test!
That was after having spent half my life (up to that time) convinced that I
could never do it! Go figure…

Alun:

My point exactly. This is one of the reasons why the requirements to be licensed in the AMATEUR radio service do not require professional-level RF engineering skills. Nevertheless, Carl seems to hold on to the notion that his being an RF engineer somehow grants him exalted status as an AMATEUR radio operator. Why is that?

I don't even understand the motivation of pirate broadcast radio. If
you have
a message or original music you want people to hear, you can reach a lot
more people
with a web site on the 'net than you ever could with radio. Either you
pirate on
SW, which few people are equipped to listen to, or FM, where your range
is quite limited, and few people will be able to hear you. And then
there is the
schedule limitation. The web site would be avaliable 24/7 for anyone so
inclined
to read or download from.

We did that back in college back in the 1970's. One of us bought a
homebrew transmitter,
did some repairs to clean it up some, threw together some turntables and
a crude mixer
board, used a mic from a cassette recorder, and went on the air Friday
night. We knew that
the nearest FCC office was about 150 miles away, and was closed for the
weekend.
We played records mostly. Some jocks from a local licensed station
found us, and
did a few shifts of our air time! (Guess they wanted the opportunity to
play their own
selections instead of a mandated playlist). I commented on our crude
equipment, and they
said that they had seen worse at licensed stations. We shut down Sunday
night and
dismantled the setup.

Later on someone else at our college did a pirate TV station! That made
the New York
Times! This was when the VCR was first comming out on the market. It was
said that someone built that transmitter out of an old guitar amp.
Sounds ludercutis,
but if it was a tube amp, could actually be done. Use the VCR's channel
modulator
as the exciter, and that feeds the "guitar" amp.

Do you think it's any big deal to set up a remote controlled via phone
lines or
even a secure internet connection set of radio receivers and spectrum
analyzers
and antenna rotators at various listening sites? Though not every town
is so
equipped, but if a pirate pops up, the local licensed stations complain
and the
FCC sends the white vans to check it out. The FCC doesn't monitor every
station in every town; they respond to complaints. Did you get busted that
one time you transmitted with the wrong mode in a ham subband? Likely
not, if you only did it once by accident and then corrected it. You have to
constantly violate some rule in an annoying fashion before the FCC comes.

No thanks, Dan. I avoid the pig pen, but I still do occasionally chit
chat on CB ch. 38 LSB and 40 USB...and no swine present. As a matter
of fact, I worked a guy on ch. 38 LSB earlier this evening who ended
up asking me to QSY to 28.440 MHz. I happily complied. ;-)

I remember it, Dan. Now dig a little further and research when that
band came into being and why it was subsequently reassigned. Then tell
me a little more about "my arguement." ;-)

The point is that Phil is trying to say that jamming in MCW doesn't count as jamming in CW, which is like trying to say that there's a vital difference between using FM or SSB to jam.

Makes no difference to Larry. His measure of an Amateur is
simply how near to being identical to Larry Roll are they. If
it is not important to Larry, it isn't important to the ARS. If
it is important to Larry, then any ham that doesn't measure up,
somehow isn't a real ham.

It never occurred to him that many many hams are also
professionals, and if we measured him by the same standard, he'd
get laughed out of the club meeting. But in fact very few hams
who are pro's in the business think that hams are measured the
way Larry does. We do realize that it wouldn't be fair, and
that the ARS is afterall, a hobby and should remain that way.

Hey, Dwight? Have you had any more problem with my news messages? I know at one point you said that you'd changed servers and didn't seem to be having any more. How's it been?

I think the problem is with the other server. I got rid of that account; I also think someone "whined" (heh heh) about how pertinent my posts are and that they just couldn't handle it any more. The error message I would get is: "you are not allowed to post to rec.radio.amateur.policy."

So, apparently someone can't handle the heat...

I feel the same way about CB, Bert. There are ways to avoid the trash, and
that is on USB or LSB. Anyone who would forsake any communication venue
just doesn't have a clue for the value of that venue...

Your logic falls apart if there are no local stations to complain.
Your logic also does not apply to HF pirates and other unlicensed
ops such as the thousands of truck drivers and others now
operating illegally in the HF bands.

He was talking about environmental monitoring and things that
the military was doing. Did you not listen? Oh, I forgot,
English is a second language for you. Also, the supply of
relative bearing grease became too expensive for the FCC to
afford anymore, so they could no longer take bearings.

>
> Of course, those _were_ imaginary back in 1995 when the ARRL
> announced the soon to be built new remote monitoring system, and
> quoted the FCC saying they would be an improvement,

Your confusing that with a FAA project. Check your
"sources" more closely. And how can you build anything on
land that the FCC no longer has? The FAA has constructed
remote air control facilities on some of the old FCC monitoring
station sites, and this is how you are getting so confused.
FAA is NOT FCC, now you get it?

Sorry, Brian. Within the circles that I operate, It's "radios." (On both 11m and the ham bands. YMMV.) FYI, folks here are QSX when they're monitoring the frequency. I rarely hear the annoying "I'm QRT and on the side" anymore, thank goodness. :-)

What I am willing to bet is that if Vippy takes someone to a
Hamfest, the third party is likely to say "What the heck are you
talking about...these are just good people having fun", hence making
Vippy look even more foolish than what he does now.

> functions, Roger.

Guess you had to suck off Bertie Garcia one way or another, eh, ASSHOLE?

> I'm told that you only came to the one meeting.

I'm told you shouldn't stalk other hams like you do, kiddie diddler.

> By the way, I'd go very carefully on that stalking stuff, Rog. You've
> frequently harrassed me here and in direct e-mails.

Awww, poor Dicksucking Davey.......you stalked Rog as well, because the only reason you
came to the ARES meeting to confront him, and let's not forget how you were going to break
the law by posting his "best newsgroup material" on telephone poles in Rog's neighborhood.

> You have an arrest

I do? Prove it.......

> record and you've been booted from a couple of ISP's.

Bwhahahahahahahaha....prove it, kiddie diddling Dave.

> You've been
> cautioned for malicious QRMing on 20 meters and have been forced to
> retest.

So some fake info was submitted and dumbfuck Riley believed it....... he still PASSED the "retest" it's doubtful you could as of today, ASSHOLE.

Okay, I get where you're going - there are no more monitoring stations in the classic sense. Satisfied now?

However, as several of us have stated, those stations have been replaced with a new automated monitoring system. In other words, the FCC is still monitoring.

> And when are you going to FINALLY upgrade from

Your messages are showing up just fine now, Kim. As I said, I switched to a new ISP yesterday morning and that seems to have at least solved my problem. I was even able to go back and read your older messages that could not be read with the old ISP.

I'm also seeing replies to my messages (from other people) that I've not seen before. I didn't know these people had even replied to my messages. It appears my old ISP was also cutting out a lot of messages before I could even read them.

On a side note, I'm also getting much faster connection speeds with the new ISP. Earthlink is a little more expensive than some of the local ISP's, but it appears to be worth the extra expense (at least for me).

It served a need from the ITU's and FCC's perspectives. And, yes, it did have to do with the fact that other services used it - the pool of trained operators concept in 97.1 of the CFR. Since the services we serve don't use code anymore, code simply no longer serves that need. That only leaves code use by ham operators for enjoyment. That doesn't warrant a unique license requirement (unique compared to the other modes).

And the FCC should go after those bad apples, whatever their license class. Ham operators should also informally ostracize the bad apples by not talking to them or inviting them to participate in other activities. Like the troublemakers in these newsgroups, these people are seeking an audience. Deprive them of that and they often change their ways fairly quickly.

That's awful. I haven't heard anything that bad on the CW/data
subbands, though. Have you?

> > Anything from an unidentified transmission to interference to jamming

Let's see: Obscenity, failure to ID, jamming, unauthorized use of a repeater. For starters.

> The point is that Phil is trying to say that jamming in MCW doesn't count
> as jamming in CW, which is like trying to say that there's a vital
> difference between using FM or SSB to jam.

No, that's not the point at all.

The point is that hams actually using CW/Morse for communications don't gather anywhere near as many enforcement actions as hams using 'phone modes for communications. The difference is far more than can be accounted for by the greater popularity of 'phone modes.

Is there a CW equivalent of the W6NUT repeater, 14,313 or 3950?

Several of "you" can state whatever you want. Doesn't make
it true. The automated monitoring systems you refer to are in
place at a few of the old monitoring station sites B U T they are
not FCC equipment. They are remote controlled FAA air
control points. Get it now? FCC is totally out of the
picture!

You would be outnumbered here by the number of dual-operators. I hear
CB'ers on ham and hams on CB every day of the week. And that's just
on sideband. I don't do AM anymore. Haven't for over 5 years.

Last night's net got overrun by noise, and we all went to the repeater.

585. FCC Monitoring Station

The monitoring station in Columbia is still there on the map.

See ADC's Howard County, MD map, page 20, grid squares B1, C1,
B2, C2, D2 and C3 (upper left corner). Shown in gov't gray.

That's an outdated map, over 15 years old. The monitoring
stations were dismantled only seven years ago.

Yes, my map is old. 2000 AD years old, in fact.

Since it is over my 2 year limit for ADC maps, I need to
buy a 2003 mapbook.

Stop trolling, and learn the facts, Jack.

This link takes you to the FCC. Oakland Mills Road has the only
entrance to Farm House Lane
http://yp.superpages.com/listings.phtml?WL=FCC&N=FCC&STYPE=S&T=&S=MD&PG=L&R=N&PS=15

My map has a year 2000 copyright on it if you can't understand my sarcasm.

Dwight -- why do we waste time on these ignoramuses?

For the record - yesterday I had a good conversation with a former colleague of mine who is one of the folks at Columbia/Laurel.

The remote-controlled HF monitoring system is up and running and used on a daily basis for investigation of complaints, controlled from there or from Washington as need be. As has been the case for many decades, the vast majority of those are non-amateur service related.

Some of the property around each site (mostly the old rhombic fields) has been sold for uses that will not interfere with the accuracy of the newer log-periodic DF systems, but enough of each site is left to do the job properly. There is no need for the old buildings, many of which date to the WW-II era, and they have been dismantled.

Enough of this crap.

Actually the three field offices were moved from "downtown"
locations (Anchorage, Honolulu, and San Juan, PR) to the monitoring
stations several years before, but why quibble ??

>Enforcement? Where's the beef?! Oh, it went to pay for that $400 hammer or
>that $1,200 barracks toilet bowl.

Well, it's time to drag out Project Accounting 101 again. As I
posted elsewhere (with apologies to the CPAs and EAs if I used
incorrect terminology as to the accountimne methods in the
example):

The scoffers fail to remember (or understand) that the "$500
hammer" came about by allocation of contract overhead by line
item rather than by proportional item cost....

Follow the bouncing ball for a machine and a hammer needed to
maintain it:

Machine catalog cost = $ 10,000.00
Hammer catalog cost = $ 10.00
Total cost of material = $ 10,010.00
10% Contract overhead = $ 1,001.00
Total contract cost = $ 11,011.00

By Proportional Item Cost allocation method, overhead is allocated
proportionally:

Machine cost = $ 10,000 + 10% = $ 11.000
Hammer cost = $ 10 + 10% = 11
Total cost = $ 11,011

By Line Item allocation method, the total overhead is divided by
the number of line items, in this case 2:

Machine cost = $ 10,000 + $ 500.50 = $ 10,500.50
Hammer cost = $ 10 + $ 500.50 = $ 510.50
Total cost = $ 11,011.00

Note the "$ 500 hammer" in the example above !!

Same hammer, same contract cost, no extra charge for the asinine
comments by The Congress and The Press and The Critics.

As to where the enforcement money went, the nickle-nursers in The
Congress never appropriated it, and even if they would have, the past
three agency chairmen - the folks who have the power to allot the
funds inside the agency - had neither regard for nor understanding of
the need for field enforcement.

And that takes care of that.......

>many cases (VHF, local issues, and so on), there isn't much else they can
>do.

At one time the FCC was putting up a network of remote VHF/UHF
receivers in various cities for monitoring and single-bearing df
purposes. Access was dial-up with multiple passwords, and the
system piped audio and bearing info back down the line over
voice-over modems. The test installaton that we used the most was
in St. Louis, MO.

Boston, Washington, and Los Angeles/San Diego had integrated
networks of multiple receivers constituting a real df system for
what we today call "Homeland Security" purposes. The California
system was funded by the Coast Guard who was the primary client, and
it was used very heavily for marine safety and rescue purposes.

With the funding cuts (a.k.a. The Great Rape) of the mid-90s the
rest of the system never got built. I don't know if the CG kept
up the maintenance funding on the system as they were 'sposed to do.

It is intentional and usually unidentified interference to voice communications (except if the repeater is running Packet or SSTV as several of our club and/or ARES/RACES repeaters do). It is NOT interference with CW/Morse communication or by a station in a legitimate QSO using CW/Morse.

As I remember, and Im not going to bother 'researching'. Class A CB was
available when Class D CB was initiated. That was the late 50s.

Oh, this is so easy it almost makes me feel guilty ruining your lame
rant.

The "international requirement" is that each country decides whether
their licensees need Morse testing to operate on HF.

For right now, the FCC has decided that they do, and continues to
grant Novices and "Tech Plus" certain HF operating spectrum.

Sunuvagun!

There is no value to CB. Whenever something good is tried the idiots trash it. Jam it, play music and tones all over it.

When I heard that while working on a CB radio, I just turned the RF gain down and went on.

Unfortunatly now I hear the exact same tactics on ham radio. Gee I wonder where that came from ???

We're not quite above such things. You oughta been there the nite in
the early '70s when the Big Guns got together and decided to hammer
Radio Moscow off a freq around 7.030. You bet it worked, Moscow moved
up the band and didn't come back.

I agree 100%. But FCC's are very limited, thanks to the mandate to "get the government off your back" from 20+ years ago. And the general unpopularity of things like taxes.

>Ham operators should also informally ostracize the bad apples by not
>talking to them or inviting them to participate in other activities.

I agree 100%. And many of us do.

But there are those who don't accept our "old fashioned values" and traditions. Like not cussing or jamming on the air. Did ostracizing clean up 3950, 14313 or W6NUT?

>Like
>the troublemakers in these newsgroups, these people are seeking an audience.
>Deprive them of that and they often change their ways fairly quickly.

Sometimes. OTOH they sometimes cluster together and reinforce each other when that is done. We had an example of that a few years ago on a local repeater. Solution was to shut down the repeater when the bad apples showed up, which deprived everyone of its use.

Total dependence on enforcement and peer group rejection is not adequate if basic "social" values are not inculcated into people's thinking.

30 minutes, huh?

As I recall, you couldn't get it to work. Weeks of trying and posting here.

Under PSK31 testing, you would be excluded from the HF part of the ARS.

We ran into this in the 70s and 80s in San Francisco. The problem
there was that the goal of the "bad apples" was to shut the repeater
down.

After we hauled one of the ringleaders into Federal court on the
complaint of the N. Cal. DX Club (it was pure coincidence that the
judge was a classmate of the chief complainant) the problem abated
somewhat and the yoyos gathered on one particular machine which
gets shut down from time to time. And this was nothing compared to
the NUT machine.

>Total dependence on enforcement and peer group rejection is not adequate if

As you mentioned once before, the *wording* being used here is
what seems to allow the confusion that a number of people are
hanging on to. When they remoted a monitoring station and say
it was "closed" but mean "unmanned", it leaves those who can't
read well with a quote: "The station was closed."

They just ignore or don't see the next sentence that says the
functionality was transfered to a remotely controlled facility.

Thanks for some useful info, Phil. Amazing what one can do with proper accounting tools. I know a gentleman in the construction business. Some years ago whilst he was preparing a bid, one of his men pointed out an error in the proposal as written. The particular government in question was widening a road and had failed to account for the left turn lane traffic loops and appropriate lights. My friend therefore bid most of the job normally, but bit the poles AT COST while pumping up the price of the traffic control loops. There were a number of intersections and my friend got the winning bid (lowest bid). Ooops, they discovered the error later and since the lowest bidder was already awarded the contract, the extra loops were added at the price for the loops specified in the bid (how many hundred percent he padded on those numbers, I don't know. But he did make a nice profit margin on that contract). :)) He was happy enough to give the guy who pointed out the error $5,000.00.

So were a lot of other people.

Is there a scientific correlation?

Oddly enough, today is the 58th anniversary of the atomic attack on the Japanese city of Hiroshima. It is estimated that 150,000 people, mostly civilians, died as a direct result of that attack.

Hey, Phil. Do they (the FCC) ever let anyone visit their monitoring facilities? I realize they probably don't want the extent of their capabilities to become public knowledge, and they certainly don't want to turn their facilities into a tourist attraction, but I would love an opportunity to see one of those places? If it is ever done, whom would I write to check into it? An email response is okay (remove the "NOSPAM" from my email address).

It's really Wry Amusement, Floyd. :-)

>Seven??? And _you_ think it bugs him!

Heh heh heh.

Doesn't bother me a bit. My interest has always been on removing the
code test for a radio license. That's begun happening internationally.
Quite satisfactory to me. More work to do on that for the US regulations
but this newsgroup is NOT the venue for any serious debate. :-)

>Dave gets out of bed every day and immediately hangs a target on
>himself to help Len get a good aim...

Dave is a walking target. He can't help himself.

"The flag is up, the flag is waving, the flag is down...you have 20
seconds."
Old, old command on the Army firing ranges for rapid fire exchange.

I'm over-qualified for that kind of "firing," Floyd. No sense wasting any
more "ammo" here. The "target" has been hit so many times he
doesn't know he's been hit. Like a zombie he parades around in his
ARS uniform as Oberst in the Amatur SchutzStaffel (A.S.S.) and the
shine on the jackboots is enough to get a good sight picture.

See you next week. Maybe.

Poor Dave, still smarting over his alleged expertise in State Dept.
communications from the Cashew Nut Capital of Africa. :-)

He loves to put down others using "standards" of his own invention.
That saves him time and embare-assment of talking ON a subject.
It's so much easier for him to insult a communicator personally when
he doesn't have any valid argument on subjects.

That seems endemic to the members of the Gang of Four, PCTAs
all, drunk on sour whine after the rewrite of S25.5.

They must according to insider Dave.

All in the ARS are accountable to Dave and Dave's standards.

Probably in the same way that Arthur Andersen Co. was
"accountable" for Enron doings. :-)

> That has
>> nothing to do with the issue of Len Anderson. He isn't a participant in

>> irrelevant to amateur radio.
>
>You are in the minority in thinking that.

Probably not. There are a whole glob of old-timers who have been busy
brainwashing and being brainwashed into thinking that amateurs are the
supermen of radio. That allowed them to have superhuman status in
their own minds...adding stature to their self-images even though not
recognized by professionals.

Amateur radio is never been anything more than a hobby/recreation
activity in radio. That is an unwanted concept to the ARS lifestylers
whose whole being revolved around amateurism as superhuman radio
activity. ARS lifestylers and some old-timers just can't separate their
fantasies from realities.

>> > But I don't hear you complaining about that, yet they have the ability

>
>So why so do you give him so much attention?

He can't help himself. :-) There's another being in here who is totally
obsessed with certain individuals...concentrating on targets it thinks
are "weak" and venting all possible bile and filth on his opponents.
"Everyone knows his name." :-)

Dave NEEDS to triumph and he isn't talking about TR-3s, either.

Dave can't possibly concede any possible viewpoint other than his own
so he MUST go after the person of his opponent rather than the subject.

>> That has been evident for some time.
>
>And you are unsatisfied with yours?

Of course he is and will state so, regardless of whether or not it is true.

>Must you try to tear down Len at every opportunity to boost your stature?

Dave has reached a state in his obsession where he can no longer
control himself.

No problem to me. I've seen it often enough in other places on other
subjects all throughout life. :-)

Anyone not meeting Dave's viewpoints will have their person attacked,
usually by his suddenly citing "standards" that never existed before or
are totally irrelevant to the subject under discussion. Misdirection is
what it is...his trying to win message points by starting a "new thread"
on a person's "qualifications."

==========

I've been away from the newsgroup nearly two weeks, enjoying life
away from reading all the shouting and hollering in here. Now I find
there is some AOL nutcase using "Avery Fine" as a pseudonym.
That's not me anymore than the other AOL nutcase "NoCWTest" is.
:-)

Now there's probably going to be lots of wasted bandwidth about AOL
screennames and the anymouse nutcases will get all hot and huffy
about mentioning their pseudonyms. They don't have the courage to
argue subjects in anything resembling debate. All those anymouse
creatures can do is spam everyone with their garble. :-)

I guess that, for many, Dave included, the modern US ARS is all
about posturing and preening and assuming "authority" where none
was granted, and playing the radio superman role for an audience that
can see through their act. :-)

See you next week. Maybe.

Leonard H. Anderson
real person, not a pseudonym, USPS address still valid at my old
HAM RADIO Magazine bylines.

Bert,

I don't mean to just break in on your argument with Phil, but consider what we are going through in Rochester, NY. Taxes are sky high, we lost over 800,000 people in New York since the mid 90s (jobs disappearing, wages going down, taxes going up). Obviously, the local governments are trying to cut budgets. Police and firemen are not being replaced as they retire or quit. Enforcement is spotty at best. We just had a large block burn down in the city due to arson a few months ago. People were doing oil changes in the streets (if not stripping cars) and oil was left in the streets. Laws were passed, but weren't favored by a lot of folks. Loud booming radios were causing problems. Laws were passed, but ignored. Those folks that you think believe in the American Way started pushing the envelope. There is now a severe drug problem (heck, if I'm not hurting anyone, it isn't any of your business). We now have the second highest murder rate in New York outside of New York City! The problem is that there is little enforcement, and some folks get emboldened. Locally, they have a new tact. There are now City of Rochester Police, Monroe County Sheriffs, and New York State Troopers patrolling Rochester. Go ahead, spit your gum out. If you're seen, you will get a ticket. Any violation, no matter how minor, and you will get stopped. You may not be searched, but pray you don't have anything visible in your car that you shouldn't (like a little bag with some white powder in it). They are starting real enforcement and there will be a lot of minor violators that will end up paying some stiff fines. I don't see any other way around the situation here; I also don't see things getting any better in the radio business without some *serious* enforcement. That would include the skip-shooting - at least until things quiet down to a dull roar. The lack of enforcement (regardless of cause, which is invariably lack of funds) is not only allowing things to get worse, it is actively promoting things to get worse.

Just my two cents' worth!

73 from Rochester, NY

That was hams uniting to repel an illegal intruder. 7.000 to 7.100 has been worldwide exclusive amateur since at least 1929.

Was there any enforcement action from FCC?

Heh, heh. I see a terrible parallel to the long-timer PCTAs. They
don't want to see reality as it really is, either. :-)

Morse code, which well predates WW2, is old and needs to be
dismantled. :-)

I think the combination of some selective operating practice along with some good old fashioned fool's luck has been responsible for my good fortune on the 11-meter CB. I run into an occasional overmodulated overpowered jerk whose signal splashes across the band, but they've been few and far between.

My answer? Additional IF filtering and more recently, the addition of a SGC ADSP2 DSP board. The results of which are dramatic. I like to preach receiver mods to those who simply cannot leave their rig stock. If they express a want (NOT need.) for more power, I suggest a speech processor. (Forget the amp!) There are some nice ones on the market from Astatic, CBCI, as well as the SP-1a.

> And YOU think that just because no one had taken the picture off
>the webpage that that's ALL they do???

You're right. That's a reasonable explanation. Alot of times I have seen old info stay on several websites. The same thing could have happened on their webpage.

>What I am willing to bet is that if Vippy takes someone to a
>Hamfest, the third party is likely to say "What the heck are you
>talking about...these are just good people having fun",

That's possible, but not probable. They will probably notice that its mostly older males right away. Also, if I invite them on a Hamfest that continues to Fri, Sat night, then I'll bet they will wonder why the Hams are operating rather than doing what most people do. I know of a couple of Hamfests coming up in late August. One of those had the Wouff Hong ceremony you had top wait three hours for (no activities scheduled in between).

What would the non-Ham observer think of that?

>> that hams set out for an operating activity and then waste that time by
>> operating or you being under the impression that your travel to a
>> domestic location was a "DXpedition".

>Comes to America then wonders why
>America isn't like the place he left.

At a DXpedition, that's would most (non-Ham) Americans would expect in (American) society.

Most (non-Ham) Americans would of course expect operating activities, but not the whole day and night (with the only breaks for eating alot). Especially at a vacation spot. A few weeks ago, at the club's cookout, one female person even asked "Is operating all you did, you didn't go to the beach or anything?". I doubt you'll see her at next year's event.

Most (non-Ham) Americans would expect the Hams would take a break from operating on Sat night. They would be surprised and disappointed otherwise.

Alun:

Well, I'm sure Carl expects that his professional RF engineering qualifications
should grant him exalted status in the ARS, but in truth, it just ain't so! I
know
lots of radio amateurs, of all license classes, who haven't made dime number
one as a professional electronics technician or engineer, who are infinitely
better hams than I am or Carl could ever be. What they all have in common is
the fact that they have, throughout their "careers" as radio amateurs, been
willing to explore and adopt new modes, while retaining the skills learned
with the old ones, particularly Morse/CW. Their stations are truly up-to-date,
they have usually attained high places on the DXCC standings, routinely
hold leadership positions within their clubs, and can be counted on to provide
valuable input and personal support for all club activities. They are the ones
who newcomers look to for the answers, while the so-called "professional"
hams simply cluster amongst themselves and look down their noses at the
proceedings of the rest of the club.

But yes, indeed, Carl does know a lot about radio!

>
>Makes no difference to Larry. His measure of an Amateur is
>simply how near to being identical to Larry Roll are they.

Floyd:

Incorrect. My "measure" of a radio amateur is based on their having
attained reasonable knowledge and proficiency in the basic skills
required to conduct effective radio communications under the rules and
regulations of the Amateur Radio Service. I hardly ever compare other
hams to my own self, since as a radio amateur, I am now, by today's
standards, an exceptionally fine example!

>If it is not important to Larry, it isn't important to the ARS.

Only if you think so, Floyd. Since you seem to be willing to suck up
to me, feel free to start impressing me at your convenience.

>If
>it is important to Larry, then any ham that doesn't measure up,
>somehow isn't a real ham.

Prove it, Floyd.

>It never occurred to him that many many hams are also
>professionals, and if we measured him by the same standard, he'd
>get laughed out of the club meeting.

I see. And this would be in keeping with the spirit of the Amateur
Radio Service…how? I'm sure you've done a lot of "laughing" at
"non-professional" hams in your day, Floyd. And I've known a lot
of "professional" hams who've done the laughing. However, I can't

really say I've learned anything useful from them, except for maybe how to have a piss-poor attitude.

>But in fact very few hams
>who are pro's in the business think that hams are measured the
>way Larry does.

Well, you must have brought up the "laughing out of meetings" for a reason, Floyd. You obviously have some experience in that area, or you wouldn't have mentioned it, if you truly feel what you just said in the quote directly above. In reality, all you've done is to expose the true nature of your attitude toward radio amateurs who truly are "amateurs" in the sense that they don't make their living as professional electronics technicians or engineers.

We do realize that it wouldn't be fair, and
>that the ARS is afterall, a hobby and should remain that way.

You're making a vain attempt to straddle the fence here, Floyd. Unfortunately, the top rail just splintered your ass but good!

An open reply is fine.

Even in the days when the stations were manned, a lot of what they
did was classified stuff for "others" and public visits were
very rare, usually limited to small groups who were somehow
connected to the technology or operations. Now, they are unmanned -
all you will see is an antenna and a box. Additionally, the
monitoring/df network is now under the Homeland Security Division,
so access is that much more limited.

No, they haven't. They all confused my position with that of someone else that
advocated that no-code technicians do have HF privileges. No one responded to
my position.

> I am inclined to think that you're just trolling for attention, and I don't

I have asked a legitimate question. How can one prove compliance with a
non-existent condition? If you think that's nonsense, that VALIDATES my point.

By definition, if one has a choice, then it's NOT a requirement. If each country is free to choose, then it's a NATIONAL CHOICE, not an international requirement. Your response is non-sequitur.

My point: The international requirement was removed. However, FCC regulations still require it. Since one CANNOT comply with a non-existent requirement, then the privilege previously granted has likewise been removed.

If my position is wrong, as you seem to think, point out the fault in the logic.

> For right now, the FCC has decided that they do, and continues to

That's right. And as it is phrased, it is dependent on the licensee meeting a condition which he cannot meet (because it no longer exists). Therefore, if one of the requisite conditions for operating cannot be met (due to the July 5 2003 change), how can any Novice or Tech licensee now operate on HF?

I have said that they can't, as a result dependent on the change to the international agreement....

Probably not. I have, however, heard endless repeated CQ calls sent in CW
by US hams on top of DX phone ops who were innocently using their phone
subbands, that happen to be regarded as CW frequencies in part 97. I am
90% sure that it is deliberate jamming, and it is a long term ongoing
situation. Presumably the perpetrators are too ignorant to understand that
FCC rules end at the border?

>
>Floyd:
>
>Incorrect. My "measure" of a radio amateur is based on their having
>attained reasonable knowledge and proficiency in the basic skills

Reasonable and proficient all seem to be defined in your book as
whatever Larry Roll can do. The fact that Carl and many others
here including myself, have been professionally involved in
radio communications for decades, and have forgotten more than
you've ever known about it, hasn't yet entered you mind.

You don't have the qualifications to determine what the measure
should be, nor how the ruler should be graded. Anyone who does
is off the scale, and you aren't.

I think it is wonderful that you passed the Extra Class license
requirements. I think it is wonderful that Carl did to, and
that many others have. That, however, is a small accomplishment
compared, for example, to probably half of what Carl manages to
accomplish on *any given day* as a professional.

The point is that Carl's level of comprehension is *not* a
suitable measure to use as a determination of who is or not a
"qualified" ham. And neither is yours, yet you continue to rant
and rave that you are qualified and others who cannot or do not
do what you did are therefore not qualified.

If Carl (or I or any number of others) stood up here and said
that until *you* can measure up to our level of comprehension
about radio communications that *you* aren't qualified, you would
have a good reason to complain. Yet that is exactly they way
you rant about the qualifications of others, and you should not
just dismiss the complaints.

>required to conduct effective radio communications under the rules and
>regulations of the Amateur Radio Service. I hardly ever compare other
>hams to my own self, since as a radio amateur, I am now, by today's

>standards, an exceptionally fine example!

You are a pissant by comparison to many. Why should we use your
level as the accepted mark on the yard stick? I'll bet Carl
passed that point when he was about 17 or 18 years old.

>>If it is not important to Larry, it isn't important to the ARS.
>
>Only if you think so, Floyd. Since you seem to be willing to suck up
>to me, feel free to start impressing me at your convenience.

I don't think so and have never said that I do. The problem is you
do think so and have repeatedly said so. My view of you lines up
with the downward angle of my nose...

>>If
>>it is important to Larry, then any ham that doesn't measure up,
>>somehow isn't a real ham.
>
>Prove it, Floyd.

You've been saying so here on a regular basis, what is there to
prove? Google has it all archived and everyone here can read...

>>It never occurred to him that many many hams are also
>>professionals, and if we measured him by the same standard, he'd
>>get laughed out of the club meeting.
>
>I see. And this would be in keeping with the spirit of the Amateur
>Radio Service…how?

It is *NOT* in keeping with what is appropriate, which is
exactly why we *don't* do that, and neither should you. So cut
it, eh.

> I'm sure you've done a lot of "laughing" at
>"non-professional" hams in your day, Floyd. And I've known a lot
>of "professional" hams who've done the laughing. However, I can't
>really say I've learned anything useful from them, except for maybe
>how to have a piss-poor attitude.

Well, you don't seem to know much and you do have a piss-poor
attitude, so you at least are admitting to what the truth is.
I'm sorry you wanted to use such sorry examples as your mentors.
I think you'd have been much better to, for example, model
yourself on someone like Carl. I'm damned impressed, and you
should be too.

>>But in fact very few hams
>>who are pro's in the business think that hams are measured the
>>way Larry does.
>
>Well, you must have brought up the "laughing out of meetings" for

>a reason, Floyd.

Indeed. I'm sorry you missed the point that you are off base.
Maybe this second attempt will sink in a little farther, maybe
not.

> You obviously have some experience in that area,
>or you wouldn't have mentioned it, if you truly feel what you just
>said in the quote directly above. In reality, all you've done is to
>expose the true nature of your attitude toward radio amateurs who
>truly are "amateurs" in the sense that they don't make their living
>as professional electronics technicians or engineers.

Why yes indeed I have Larry. They tend to be nice people, and
in no way should be treated the way you treat them. They do
not need to even reach the levels of understanding that you
have in order to be qualified to use radio as a hobby. They can
get significantly useful levels of enjoyment from Amateur Radio
without having to become as well versed as even you, a mere
piker in the world of radio. We don't need to insist that they
pass some level of Morse Code proficiency that you did just
because you did. Indeed, it is no longer of any value to anyone
to have Amateurs pass *any* level of Morse Code proficiency.
Likewise there do need to be adjustments made on a regular basis
to what kinds of theory questions are asked on written exams,
because the technology continues to change rapidly. It is
grossly unfair of you to claim that the newer testing methods
and questions are any less appropriate now than those in use
when you just happened to take the tests then.

Instead of trying to act so blessedly holier than thou, you
might compare yourself *honestly* to Carl, as an example.
Because he almost certainly is someone you could use as a role
model to help you improve your image as an Amateur Radio
operator.

>We do realize that it wouldn't be fair, and
>>that the ARS is afterall, a hobby and should remain that way.
>
>You're making a vain attempt to straddle the fence here, Floyd.
>Unfortunately, the top rail just splintered your ass but good!

It's a hobby you twit. I'm not even close to the fence, much
less stressing it enough to splinter anything.

If you ever learn enough about Amateur Radio to catch on, you'll
eat those words. Carl, if for no other reason than his
professional qualifications, though in his case he still would
fit the bill if he were instead a store clerk, is in fact a
person who does reach the status of "exalted".

You don't Larry. And the following paragraph demonstrates why.
You've missed what it is all about. It is a hobby, with a vast
variety of areas to specialize in and enjoy and learn about.

> I
>know
>lots of radio amateurs, of all license classes, who haven't made dime number
>one as a professional electronics technician or engineer, who are infinitely
>better hams than I am or Carl could ever be. What they all have in common is
>the fact that they have, throughout their "careers" as radio amateurs, been
>willing to explore and adopt new modes, while retaining the skills learned
>with the old ones, particularly Morse/CW.

So the *only* way, in your demented opinion, to be a great Radio
Amateur, is to retain "Morse/CW" skills... No none code
licensee could ever be a good ham.

No hobbiest who forgets Morse code 10 or 20 years after passing
the test could then be a better ham than you.

Why? Well, it seems to be that you still know Morse, so they
should too!

And they *must* explore and adopt new modes! So they can't
stick with AM, or SSB, or Slow Scan, or RTTY, or NBFM, or AMSAT,
or whatever (even though they *must* continue with CW), but
instead have to jump to whatever is the latest and the greatest.

(BTW, what *is* the latest and greatest that everyone should be
doing? I'm collecting old brass triumph style straight keys and
toying with 30 year old tube radios, does that count???)

> Their stations are truly up-to-date,

I can't even begin to define what "truly up-to-date" is. I know
some really great hams that just dearly love to use only old
tube type equipment. I had an email conversation with an old
Internet friend the other day, who just dearly loves to use and
work with old AM transmitters!

He can't, in your world, be a good Ham. I'm going to have to
tell him that after 50 years, he's not an OT, he's a waste in
the Book Of Larry "Measuring Stick for All Amateur Operators"
Roll.

>they have usually attained high places on the DXCC standings, routinely

Really? Even the ones who've never worked HF in their lives?
I'd bet that the majority of really great Hams since 1950 or so
have never even gotten a DXCC certificate, much less ever been
high up on the DXCC Honor Roll.

Maybe Larry "Measuring Stick Himself" Roll like to DX?

>hold leadership positions within their clubs, and can be counted on to provide
>valuable input and personal support for all club activities.

Now, that I agree is most likely true.

>They are the ones
>who newcomers look to for the answers, while the so-called "professional"
>hams simply cluster amongst themselves and look down their noses at the
>proceedings of the rest of the club.

No Larry. It is those professionals who usually *are* the ones
people look to for answers and leadership.

>But yes, indeed, Carl does know a lot about radio!

And you don't. That's one reason why he's a such a good role
model, a recognized leader, and a good Radio Amateur.

>73 de Larry, K3LT

And Larry is a twit.

Stussy doesn't apply logic, he has been spouting the same stuff
over and over. He just can't seem to except the fact that until
the FCC drops the code requirement, if it does, that nothing has
changed as far as U.S. Amateur radio.

It's most likely, unless the third party you take is a relative
of yours.

> They will probably notice that its mostly older males right away.)SNIP)

So are the Knights of Columbus, The Shriners, and a long list of
other social organizations I can think of...So what?

> Also, if I invite them on a Hamfest that continues to
> Fri, Sat night, then I'll bet they will wonder why the Hams are operating
> rather than doing what most people do.

"..what most people do"...?!?!

It's ABOUT Amatuer Radio, Vipul...The event is organized FOR
Amateur Radio operators by Amateurs and OPERATING radios.

If you go to a NASCAR event, "most people" are watching or racing
fast cars. If you go to a rock concert, they are listening/watching a
band play music.

Why do you fail to comprehend that Amateur Radio is ABOUT
operating radios??? It's not about sightseeing, meeting preety fems,
or discussing dietary habits.

> I know of a couple of Hamfests coming up
> in late August. One of those had the Wouff Hong ceremony you had top wait three
> hours for (no activities scheduled in between).

Well by golly why don't YOU go organize a sightseeing trip or get
Jenny Craig to come in and give a presentation...???

> What would the non-Ham observer think of that?

What does it matter, Vipul? The event was not organized for "the
non-ham observer". It was organized for the licensed Amateur
participant.

> >> that hams set out for an operating activity and then waste that time by
> >> operating or you being under the impression that your travel to a

>
> >Comes to America then wonders why
> >America isn't like the place he left.
>
> At a DXpedition, that's would most (non-Ham) Americans would expect in
> (American) society.

It doesn't matter what a "non-ham" thinks about it, Vipul. If a
"non-ham" is looking for any of the aforementioned distractions, then
they are free to do them. Amateur Radio is ABOUT operating radios.

> Most (non-Ham) Americans would of course expect operating activities, but not

Well that's too bad. You had better run along an catch her,
Vippy! You and her have something in common! A complete lack of
understanding of what the event is all about.

> Most (non-Ham) Americans would expect the Hams would take a break from
> operating on Sat night. They would be surprised and disappointed otherwise.

Why? Why should "they" expect Amateurs to stop doing the very
thing the special even was organized to do...?!?!

Sheesh

So as to the subject "Do Hams get 11 Meters Back", I ask, "why
in the world would hams want 11 meters back?" Eleven meters is
the perfect example of what happens when rules are thrown out
the window, total chaos. The cber's have managed to make it the
sewer pit of the radio spectrum and the sad part is they can't
even keep it in their own territory, they have to spew their
garbage to other frequencies as well.
The fact that hams in general follow the rules, and expect other
operators to do the same is what keeps many cber's from getting
a license. I say, "good riddance, we don't need those types in
ham radio."

We are a nation of laws, and those laws must be enacted or
changed in a democratic process, this one included.

The international rule was changed from "you will" to "you may",
therefore the legal premise for the continuation of code testing until
the US law has been changed IS valid.

It sure does!!

> FYI, folks here are QSX when they're monitoring
> the frequency. I rarely hear the annoying "I'm QRT and on the side" anymore,
> thank goodness. :-)

I was involved in trying to use CB for it's original intended purpose
in the mid-'70s in 23 channel days. Specifically for comms for a
municipal Townwatch group of 135 citizens 95% of whom had no interest
at all in hobby radio and just wanted reasonably decent local
neighborhood mobile comms. The disgusted group would have fallen apart
if I hadn't moved the operation up onto a VHF business freq to get
away from the CB crud. Cost a bundle but they're still on that freq.

Every once in a blue moon when I've had absolutely nothing better to
do with my life I've gotten on 27Mhz and looked for intelligent life.
On the rare occasions when I've actually found some it lasts maybe
five minutes at most before the bozos blow it off the freq.

YMMV . . !

Dan, trust me...NOBODY understands how you feel better than I. I just plain old REFUSE to let the lids win and keep the band for themselves. I and a local (relatively speaking) group of ragchewers (mostly hams) still chew the fat on 40 USB every now and then. If our operating practices rub off on a newbie CBer or two, great.

That is unfortunate, but I attribute it to the lids themselves...not the band they came from or the band they're on.

I certainly understand 100% wrt the situation you've described above, Jim. While I certainly don't equate working DX on the CB with some of the violations you mentioned above, I neither do it (DX on the CB.) nor encourage anyone else to do it.

HOWEVER, I do support changing the rule via the legal and proper protocol. End of story. I acknowledge that many folks do it now and the FCC does absolutely nothing, but I certainly do NOT encourage it or endorse it. If it is ever legalized, I'd tell folks to go for it...but certainly not now.

I realize my position on this subject is not popular among my fellow hams, but it's what I believe. Thus far NOBODY has really provide a satisfactory arguement against it. Most attempt to drag other unrelated subjects such as freebanding and amplifiers into the fray. "Working DX will encourage the use of illegal amplifiers," they say...conveniently forgetting that QRP demonstrates otherwise with even less power output. (5 vs. 12 Watts)

I'm not going to change my beliefs just to avoid being flamed on a USENET newsgroup. Just as I wouldn't on rec.radio.cb when I told 'em to get of their asses and study for and pass Element 1 rather than play that pathetic waiting game.

BTW, Phil and I have no argument...just a difference of opinion. I respect Phil's opinion just as I hope he would respect mine. I did not start this thread, I merely responded to the original post and it snowballed into this. I basically argue with nobody. Take care, Jim.

> the FCC has a rather sophisticated national spectrum monitoring
> system?

Actually when you think about it the FCC is only one player in the monitoring loop Floyd. NSA, the DoD and the CIA have and have had monitoring capabilities which make the FCC's look quite lame in comparison. They have massive spook sites globally plus who knows how many satellites snooping everywhere. Lookit how they've even tuned in terrorist cell phones recently. Whizzy scary! These guys historically could have cared less about digging up the bullshit-level SW & FM pirates, they have bigger fish to fry.

But then along comes this Homeland Security drill. One of if not the primary thrust of the Homeland Security Dept. is to stitch together assets which have not been working with each other in the past. Including the various monitoring assets of course. And the networking technology is in place.

It's obvious that if they gave a rat's patooie about pirates the FCC can probably tap into the spook monitoring assets at will in addition to using their own. Thus it is that the monitoring threat to pirates has ratcheted up enormously vs. the bullshit posted around here about the FCC going out of the monitoring biz.

Bert, I quite agree, and that has long been a vital part of my "point".
It's not the CB Band that's coming down to join us once the Morse code
test is history, it's the operators. Unfortunately the vast majority are not
the sort you're involved with.. Most of those folks would just learn the
code
and go take the test, and become assets to the ARS, as you did. It's those
who had "no time nor interest" that bring on the problems en masse.

You know, Bert, Jim N2EY seems to have stuck the nail squarely on the
head when he said here
that it just could be that FCC realizes the most effective way to draw
all those recalcitrants
on 27 mHz into ham radio is to make the test for licenses so easy - and
code free- that they WILL want to become hams and abandon 27 mHz.
I see thas as a very flawed plan, if it's true. There will be lots of
them who just don't want to
place themselves under rules and restrictions after so much time in
Freeband-land.
I'm familiar with a substantial number of CBers turned hams who did
indeed become the
sort of hams that carry the hobby, and no doubt there will be more in a
codefree license time.
My worry is all that comes with them. Maybe with the era of the
Internet, when even many hams are much less involved in the hobby than
before instant worldwide computer communications arrived, the
troublemakers will be fewer in number also.
At least we can hope.

Dick

> I have, however, heard endless repeated CQ calls sent in CW
> by US hams on top of DX phone ops who were innocently using their phone
> subbands, that happen to be regarded as CW frequencies in part 97.

Frequency? Date, Time?

> I am
> 90% sure that it is deliberate jamming, and it is a long term ongoing
> situation.

How do you know it is deliberate? Perhaps the CQers could not hear the
DX 'phones. Perhaps the DX phones were on top of US CW ops innocently
sending CQ on frequencies that, by bandplan, are CW/digital.

The FCC has definite criteria for deliberate interference. One criterion is if a station allegedly being interfered with changes frequency, and the alleged interferer changes frequency too.

> Presumably the perpetrators are too ignorant to understand that
> FCC rules end at the border?

Who are "the perpetrators" in that case?

You are presuming guilt without adequate proof. Do you have any evidence that the alleged violators could hear the alleged victims? Or evidence that the alleged victims were using the frequency first, rather than the other way around?

Most CW ops use narrow filters - 500, 400, 250 Hz are common choices.* Useless for 'phone, of course. The CQers may not have realized how close they were to the DX 'phones. How much room should a CW station give a weak 'phone station?

Of course the DX 'phones could have switched to CW and answered the CQers, then politely asked them to move.

73 de Jim, N2EY

*My Southgate Type 7 has two cascaded 8 pole 500 Hz crystal filters, giving an effective bandwidth of less than 400 Hz and very steep filter skirts. And it has an audio LC filter as well.

Welcome to rec.radio.amateur.policy

Here you will find the largest collection on Usenet
of Assorted Fruits, Nuts, Wackos, Wannabes, Liars,
Bullshitters, Psychos, Weirdos, Societal Misfits, Losers,
and people with absolutely no life.

Pull up and chair and lurk, as you watch these rejects
bicker over nothing but think they are the most important
people on the planet.

Special note for anyone considering becoming a ham
radio operator. Do not judge what you see in this
news group as representative of amateur radio. Ham
radio is a great hobby with great people in it. The
people you see in this news group are those whom the
FCC has caught and fined, then kicked off the ham
bands. The people here are the ones who used to sit
on 14313 and jam their fellow hams. They are also
the nuts who used to roam 75 meters at night, making
the same trouble you see here. However, we all
are greatly appreciative to Mr Riley Hollingsworth of
the FCC who banished all these misfits off the ham
bands. Unfortunately, they have taken residence up here
in this news group. Let it be that way though, as the
rest of us can now enjoy our ham radio bands, free of
the vermin you see in this news group.

so!

Larry,

I don't expect "exalted status" ... just some respect as one who is arguably
more knowledgable and competent in RF technology than the average ham.

However, as has been pointed out, you insist that your superior CW skill
is ALL that counts and that since I'm not up to your standards in that area
I'm a "lesser ham."

Some of us would say it still does. All a matter of opinion.

> And, yes, it did
> have to do with the fact that other services used it - the pool of trained
> operators concept in 97.1 of the CFR.

That "pool" thing is in Part 97, not ITU-R

However, it says "pool of trained operators" right? Not "pool of
trained CW/Morse operators". So it applies as a general reason for the
service to exist, not as a reason for code testing.

> Since the services we serve don't use
> code anymore, code simply no longer serves that need.

If it ever did. And amateur radio does not exist to serve other
services.

The "pool of trained operators" thing in 97.1 is really about the idea
of the ARS being a service where the licensees (hams) are skilled both
operationally and technically, able to do a lot of different things
well. This distinguishes it from other services, which usually involve
various types of certified equipment, channelized operation, and the
participation of both specialized professionals and unskilled users.
Look at cell phones - lots of specialized technology and technical
people do the hardware, so that the user doesn't have to know anything

other than how to "dial" a number. Heck, some users don;t even realize
their "phone" is actually a radio transceiver.

> That only leaves code
> use by ham operators for enjoyment.

And public service.

> That doesn't warrant a unique license
> requirement (unique compared to the other modes).

Your opinion noted. Others' opinions differ.

Besides, everything hams do is either "for enjoyment" or public
service. Does that mean none of it should be tested?

Was that action legal, Jim? I certainly believe that it was the correct
action, given the circumstances. I'd always believed that deliberate
interference was illegal no matter what and that that intruders were to be
handled by the FCC.

FCC said a few years ago that unauthorized users are afforded no
protection from interference
by licensed authorized users. It's as though they weren't even there,
which they should not be.

With some BPL proponents asking FCC to change that to where unlicensed
Part 15
users DO get protection from licensed users, one wonders how it will all
shake out.
It looks to me like they're trying an end run around the weak side.

Very few people seem to realize the extent of that, or even
begin to consider how it relates to specifically to themselves
on a very personal basis.

I am retired from the telecommunication industry. I've been
trying for literally decades to convince people that they should
never say anything on a telephone if they can't live with
seeing it published the next day on the front page of the local
newspaper.

That applies to *anything* communicated via a radio
transmission. If someone thinks they and the person they are
talking to are the only ones listening, they are *wrong*.

Isn't this dweeb a treasure? After all, one person's trash IS
another's treasure.
Evidently his vaunted "professionals" aren't any too anzious to have
anything to
do with him. Wonder why? Could it be they're embarassed to be associated
with him in any way? Since many of his targets here are also active or
retired
professionals and know the situation from both sides, it's easy to
perceive that
is exactly the situation
He very clearly has a compelling need to hang out on RECREATIONAL
radio newsgroups, haranguing *active* participantsof the type
who've been active, involved and have achieved, while pandering to
the non-participating type. Some of his few buddies here took advantage of
easy ham radio licening but who mostly just waited for time and
evolution to
take care of his dreaded Morris code test -HIS type of ham, other than
the fact that
since he never could qualify for a license he limits his participation to
haranguing those who did- successfully and *fully*. While he sat by
and jealously watched in envy.

Small wonder he soon earned the above captioned moniker

I suspected it was nearly impossible. But, who knows, there might have been some little known visitor program or something. One never knows for sure until one asks, right?

Of course, I was interested in the main facility in Maryland, not the unmanned facilities.

Actually, the CHP's decided that 800 MHz just wouldn't cut
it in hilly country, and there were no NPSPAC 800 MHz
channels left in the congested cities, so they decided the
best approach was to build a hybrid 150/450/800 MHz system
statewide. Don't know how they intended to get universal
interoperability for their system however. Maybe they
weren't. Anyway, a small $38B budget shortfall has taken
care of that plan for now. Last I heard, the CHP project
was worth about $1B to some lucky company whose name almost
certainly begins with M.

We hope! As in most things of this sort, the problem is that
Non-technical people make the decisions, and technical people have to
explain the problems to them. In addition, some of the competing forces
are happy to throw much money at those who decide. So the Hams start out
at a disadvantage.

Consider that it means cell phones and just your plain old
telephone in the kitchen too.

I know of one instance where a fellow admitted to having
committed a murder while talking on a cell phone. The local
newspaper had a scanner tuned to it, with a tape recorder
running. It did in fact get printed on the front page, in a
word for word transcript, and he is now in jail.

You just can't legislate propagation. Even if all the users complied with
the 155.3 mi. limit, the QRM from legal comms in distant places makes local
work difficult, if not impossible. I've experienced a S7 noise level from
distant comms personally and the guy in Germany came in clearer than someone
across town. When the band's open, 12 Watts will work the world.

> the FCC drops the code requirement, if it does, that nothing has
> changed as far as U.S. Amateur radio.

1) Try addressing me PROPERLY; i.e. a surname is normally prefixed by Mr.

2) I agree that the FCC hasn't changed anything, but they didn't have to. They made their regulation dependent on a regulation outside of their control, and when that outside regulation was changed, the change to the U.S. rules was AUTOMATIC on account of the dependency. The change that was made propagated down; no explicit change to U.S. law was even needed.

3) You seem to think that I am saying that no-coders have HF privileges. That's the only thing I can conclude about your comment about dropping code. YOU ARE WRONG. I haven't said any such thing. What I said is that coded Technicians and Novices have LOST HF privileges as a result of the international change. Why? Because their right to operate HF was NOT based on holding "element 1 credit" (like that of the other license classes) but on an international requirement that has been eliminated (and replaced with a national option) and with the referred to requirement gone, there is no way under the FCC's regulation that these licensees can show compliance with the non-existent requirement; thus, their HF privileges were CANCELLED.

I'm going to interject here, since I'm still on Vacation and can only get in so many posts for a bit.

I don't understand a few of the things Carl says here. That we will dissapear unless we get "significant growth".

What exactly is that? a 100 percent increase in a day? increase at 1 percent over population increase?

I'd like to know the advances they will bring.

I want to hear how those who oppose the ending of the Morse code requirement are keeping ham radio from marching forward.

Time for the roadmap to the future to be laid out.

Or is this like the last scene in "The Candidate"?

I find it amusing that even though the PCTA's have lost the war, that those who brought this to bear cannot avoid smacking us around a little bit yet. It might be fun, but isn't doing anyone a bit of good.

Gloat time is over. Your time has come. You now have the chance to prove that you were right. And browbeating the losers isn't a very good start.

Sorry to hijack the thread, Jim!

Many of them are moving across the state lines to NJ or PA, etc.

California has a similar problem. There is an exodus of non-immigrant
Americans from the Golden State for similar reasons. The turnaround
point was about 1995. Only massive immigration keeps CA numbers up.

I understand that this "zero tolerance" approach was done in New York City under Rudy Giuliani. Things like turnstile-jumping, graffiti, even jaywalking were jumped on with both feet by law enforcement AND backed up by the courts. One side effect was that a considerable number of folks for whom there were bench warrants were brought in for minor violations and kept. Another was that major crime dropped.

> things to get worse.

Yup. And it's a gradual thing that shows up in many ways. Similar to when a neighborhood goes downhill. It starts with little things like not taking care of properties and not reining in minor offenses. But it doesn't stop there.
Pretty soon most of the people who can move out are gone.

This is not a minor problem in amateur radio. There's all sorts of talk about young people not wanting to learn the code, yada yada yada, but not much about how the antics of a few can turn off young people and their parents. And if that happens, forget about recruitment.

There have also been predictions and promises of a "brave new world"
that the new changes would bring. Which also did not come to pass.
>
> Witness:
>
> conversion from spark to CW;
> conversion from AM to SSB;
> introduction of packet radio and other "new-fangled @^#%$ computer
> thingies";

None of these were forced on hams by regulatory change. Hams adopted
them voluntarily. For example, spark wasn't outlawed for hams until

1927, even though it was essentially abandoned by hams by 1923 or 24.

AM is still popular on HF - in fact, more popular than 20-30 years ago. What caused hams to abandon AM in large numbers was the simple fact that an SSB transceiver was less expensive than an AM receiver-transmitter combo of equal effective power. That transition also drastically reduced the amount of homebrewing done by hams.

Packet is still mostly the 1200 baud of the '80s. The biggest new modes of the past decade or so are PSK-31 and APRS. Good stuff!

> the introduction of the no-code Tech license;

Which has not resulted in greatly increased longterm growth nor a techno revolution.

> restructuring 3 years ago;

Which has not resulted in greatly increased longterm growth nor a techno revolution.
>
> and many others I'm sure I've omitted.

Here are some, just for discussion:

- the 1929 rules changes that drastically cut the spectrum available to hams and greatly increased the signal quality requirements.

- the 1951 introduction of the Novice, Tech and Extra licenses

- the "incentive licensing" changes of 1968-69 that drastically increased the requirements for a full privileges license. And ushered in a period of growth and innovation....

> The point is, the world (and ham radio) is NOT going to end ... despite
> your rants that it is.

That depends on what is meant by "ending".

> the progress of ham radio over the years), we WOULD be in danger.

Apples and oranges. Rules changes are not the same thing as choices made by hams. And the AM-SSB wars did not help amateur radio.

Well, there you have it.
>
> However, those newcomers are the future of ham radio ... for us older
> guys will surely die, and if there aren't younger folks to replace us ham
> radio will die with us.

I am younger than you, Carl. In fact I'm younger than many who post
here. Yet I'm more of an oldtimer, too.

There are newcomers of all ages today. I have already seen many hams
come and go, either as SKs or dropouts. There are many who are hams
only in that they are still in the FCC database. A good number of them
are much newer than me.

> It's up to us to WELCOME and ENCOURAGE
> them ... their ways will not be the ways of the past ... things change and
> nobody can freeze time.

Yet at the same time it is folly to equate "change" with "progress".
Not all of the changes in the ARS have been for the best.

I can remember a time when you simply could not find anything of
offensive content on the ham bands - they were G rated, regardless of
mode. This wasn't just because of the mores of the times or
enforcement by FCC - it was "the way hams did things" - a tradition of
high standards - passed on from oldtimers to newcomers.

I can also remember a time when most hams were unafraid to build,
repair, modify or simply fool with their equipment. Today it is the
homebrewer who is unusual.

The most important values of the ARS do not need to change. Things
like adherence to the regulations and standards, courtesy on the air
and off, technical know-how, operating skill, welcome and help for the
newcomer, respect for the oldtimer, making a place and a space for all
who follow the rules.....these things must be preserved, or ham radio
is dead.

> But insulting, berating, demeaning them, and trying
> to keep them out is not the way ..

If they see hams insulting, berating and demeaning each other, what
are they to think?

>
> Think about these things long and hard before you look yourself in

Maybe your "we" but I've run into some other "we's" on CW who are not
as lily-white. The infamous antics in the CW pileups on Don Miller
come to mind for one.

>I have seen old
>> info stay on several websites. The same thing could have happened on their
>> webpage.
>
> In otherwords: "I can't provide a reasonable alternative".

I am sure I'm right about the club members hating homebrewing.

This could be verified by asking people in the photo if they want to do a homebrewing project. Many of the people in the photo are still in the club.

However, I've let my club membership expire. And, tracking down people in the photo would get very time consuming. Alot of work just to prove a point. Also, I have other things that I need to do.

>> Also, if I invite them on a Hamfest that continues to
>> Fri, Sat night, then I'll bet they will wonder why the Hams are operating
>> rather than doing what most people do.
>
> "..what most people do"...?!?!
>
> It's ABOUT Amatuer Radio, Vipul...The event is organized FOR
>Amateur Radio operators by Amateurs and OPERATING radios.

Other than Field day, an event does not HAVE do be scheduled during Fri, Sat night. Most people would do more recreational activities during that time.

Its only because Hams are the type of people that would be at a Hamfest or operate Sat night. My former co-worker, the Ham that introduced me to a Hamfest, was fairly anti-social too. Also, he made weekly coffee trips to Starbucks (alot of calories). He is now out of the country. He is American, and he married some Asian girl he met online and he quit his job and moved over there.

>What does it matter, Vipul? The event was not organized for "the
>non-ham observer".

Sometimes they do try to sign up new members there. The anti-social aspect would put off the person considering the hobby. That's a reason people turn away.

>> Most (non-Ham) Americans would expect the Hams would take a break from
>> operating on Sat night. They would be surprised and disappointed otherwise.
>
> Why? Why should "they" expect Amateurs to stop doing the very

>thing the special even was organized to do...?!?!

The event more than fulfilled what it was organized to do when they operated all day with few breaks. It was not necessary to go all night as well. They could have taken at least a few hours break to do some vacation activities.

That's what most (non-Ham) people would do. Even another hobby group would take a break from that hobby on Sat night and enjoy some of the vacation activities at a vacation location. Its only Hams that would continue operating Sat night. They saw other Hams on ATV, but not other people in person. I don't expect that you would understand that most people would be disappointed with that.

> under the FCC's regulation that these licensees can show compliance with
the
> non-existent requirement; thus, their HF privileges were CANCELLED.

Mr. Stussy,

Please read VERY SLOWLY:

The international requirement has not been eliminated, it has been changed.

It now says "Administrations SHALL determine ..."

In ITU-ese, "shall" is mandatory.

Therefore, the FCC is OBLIGATED to determine whether or not any
class of amateur license requires a Morse test.

Since the FCC had ALREADY determined that a 5 wpm Morse
test was required for HF access, it has already met that obligation.

Thus the existing FCC rules are "legal," nothing has changed,
and NOBODY has lost ANY privileges.

The fact that the FCC is free to make a NEW determination and
eliminate the Morse requirement from its own rules makes NO

difference.

I respectfully hope you get it this time ...

Radio Moscow wasn't/isn't particularly concerned about what the FCC
does or doesn't do or think. There's a procedure for handling foreign
intruders via diplomatic channels. So a bunch of guys with beams at
150 feet and kilowatts to spare saved the FCC and State from that
drudgery and got the job done in 15 minutes.

> > Was there any enforcement action from FCC?
>
> I'm curious about that too, was there?

The only place I saw anything about it in print was in a subsequent weekly spots bulletin where a few attaboys got passed around. Not a peep about it in QST.

>when and where you failed.

Well, this just sounded too good not to go have a look. What a
hoot. There's was the DICK, saying that something doesn't fit
Shannon's theorum, then claiming oh, actually it is just Cecil's
way of describing it...

Lord, I was falling out of my chair laughing while I read through
that.

Extra DICK doesn't understand Shannon's work, can't relate PSK31 to
CW as far as a bandwidth limited channel is concerned, and was soundly
thrashed by others for his stubborn refusal to learn.

Of course, Extra DICK is still here telling us that he is a measure
of what makes for a good ham operator, and that anyone who's any
dumber than him shouldn't be allowed on the bands.

Hmmm... maybe when we look at it from that perspective, he may have
a point, eh?

I would submit that the change from spark to CW was a big, progressive
change.

Likewise the change from AM to SSB.

From plain RTTY to things like AMTOR, PACTOR, PSK31, etc.

Did these changes come about overnight? No. Did OTs bitch
and whine? Yes.

> > Witness:
> >
> > conversion from spark to CW;
> > conversion from AM to SSB;
> > introduction of packet radio and other "new-fangled @^#%$ computer

> None of these were forced on hams by regulatory change. Hams adopted
> them voluntarily. For example, spark wasn't outlawed for hams until
> 1927, even though it was essentially abandoned by hams by 1923 or 24.

Nobody is proposing a regulatory change that will prohibit or in any way
restrict the USE of Morse ... all that's being asked for is to eliminate the
test requirement that even the FCC and the IARU admit are not in the
best interest of the future of ham radio.

Nobody is being forced to do anything ... in fact, the proposed/anticipated
change will STOP forcing folks to do something that many don't want to
do ...

So, the "None of these were forced on hams by regulatory change." argument
doesn't hold water Jim.

> AM is still popular on HF - in fact, more popular than 20-30 years
> ago. What caused hams to abandon AM in large numbers was the simple
> fact that an SSB transceiver was less expensive than an AM
> receiver-transmitter combo of equal effective power. That transition
> also drastically reduced the amount of homebrewing done by hams.

What drastically reduced the amount of homebrewing done by hams
is a combination of the following:

1) technology got more "complicated" for the uninitiated
2) parts got harder to buy at reasonable prices in small
quantities
3) the performance and quality of "store-bought" gear
improved and at the same time the cost in (adjusted) $
dropped dramatically.

Heck, you can buy a decent 2m transciever for $150 today
... something with performance, quality, reliability, and ergonomics
that the average ham couldn't duplicate for 3x that price when
buying parts in small quantities.

Does that mean I think homebrewing should roll over and die?
CERTAINLY NOT ...

> > the introduction of the no-code Tech license;
>
> Which has not resulted in greatly increased longterm growth nor a
> techno revolution.

If it weren't for the thousands of hams who have entered via the
no-code tech license, the ham population would be something
like 1/2 what it was in 1990 ...

When you start out with an old, greying demographic (and I'm
no "spring chicken"), if there are no newcomers, the population
can only drop dramatically.
[snipped here for lack of time and tiredness ... it's been a LONG day]

Yea ... I was in that argument with Dick too ... he kept insisting that
Shannon had NOTHING to do with ham radio (like some of the
most fundamental principles of communications theory are ... to
Dick, at least ... "irrelevant" to hams). I think I challenged him to
break Shannon's law ... :-)

> Of course, Extra DICK is still here telling us that he is a measure

Yes, I would say that the threshold should be more like "Anyone who's
even close to as dumb as Dick shouldn't be a ham, let alone an Extra."

Floyd:

Perhaps the difference here is that Carl is seeking "exalted" status,
and I'm not. I have never, in seriousness, described myself as anything
other than an "average" radio amateur.

SNIP

>So the *only* way, in your demented opinion, to be a great Radio
>Amateur, is to retain "Morse/CW" skills... No none code
>licensee could ever be a good ham.

I have stated many times that it *is* possible for a "no-code" licensee
to be a good ham. However, the will be lacking the useful
communications skill of Morse/CW proficiency, and I do require then
to at least acknowledge this as a meaningful difference between
themselves and hams who do possess this skill.

>No hobbiest who forgets Morse code 10 or 20 years after passing
>the test could then be a better ham than you.
>
>Why? Well, it seems to be that you still know Morse, so they
>should too!

No, I have stated that they are missing (or not using) a valuable
communications skill -- a skill which confers practical communications
capability under conditions which render other modes unusable. This
is a proven, verifiable truth -- but only CW users know it to be so.

>And they *must* explore and adopt new modes!

The Radio Amateur's Code states: "A radio amateur is PROGRESSIVE…
with knowledge abreast of science, a well-built and efficient station and
operation above reproach." -- Paul M. Segal, W9EEA, 1928.

>So they can't
>stick with AM, or SSB, or Slow Scan, or RTTY, or NBFM, or AMSAT,
>or whatever (even though they *must* continue with CW), but
>instead have to jump to whatever is the latest and the greatest.

What part of the above excerpt from the Radio Amateur's Code
suggests that "sticking with one mode" is "progressive?" I don't see it
that way, and I'm sure that W9EEA wouldn't have, either.

>(BTW, what *is* the latest and greatest that everyone should be
>doing? I'm collecting old brass triumph style straight keys and
>toying with 30 year old tube radios, does that count???)

Pursuing the collection and use of old equipment is certainly a
popular pastime among radio amateurs, but if it is done to the
exclusion of advancing your communications capabilities to include
more modern, digital modes, then you are only serving to foster the
impression the public has that radio amateurs are, in fact, outdated
and NON-progressive. Is this an image you want people outside the
ARS to have of us, particularly in light of present and future
challenges to our spectrum allocations?

>> Their stations are truly up-to-date,
>
>I can't even begin to define what "truly up-to-date" is. I know

Carl:

You have been shown that respect quite consistently, particularly by me.
However, the fact that you seem to be ignoring that fact is getting to be
more than a little bit off-putting.

>However, as has been pointed out, you insist that your superior CW skill
>is ALL that counts and that since I'm not up to your standards in that area
>I'm a "lesser ham."

It's a simple fact that you don't have operating experience and proficiency
in Morse/CW, which I consider to be one of the most useful communications
skills in the radio amateur's arsenal. I have always acknowledged your
superior, professional-grade technical skills, and those of all other hams of
all license classes who possess them. However, I must reiterate, this is the
AMATEUR Radio Service. The ARS has a long-standing tradition of
requiring proficiency in the use of the Morse code, for the purpose of
permitting radio amateurs to exploit the many benefits and advantages of
that particular mode. I have consistently stated that I feel that this skill
is
important enough to radio AMATEURS that it simply cannot be replaced,
even with technical skills which exceed licensing requirements.

This is my opinion, Carl -- not a demonstration of any lack of due respect.
I would expect a person of your intelligence to recognize and acknowledge
the difference. Moreover, I have never held myself out as anything more
than an "average" ham, with the notable exception of occasional hyperbole
used in this newsgroup (and nowhere else) to push the buttons of particularly
intransigent fellow participants, including your own good self. I expect
you to recognize and acknowledge that difference as well. I'm perfectly
willing to live with the fact that we don't see eye-to-eye re: code testing.
Are you?

>
>I would submit that the change from spark to CW was a big, progressive
>change.

Sure. Hams did it voluntarily.

>Likewise the change from AM to SSB.

To a certain extent. But the change had its downside, too. Ham radio used to
get a lot of free publicity and recruitment in the form of SWLs hearing hams on
AM. That pretty much ended with the switch to SSB. The number of new hams
slowed down (in part) because of that change.
>
>From plain RTTY to things like AMTOR, PACTOR, PSK31, etc.
>
Plain RTTY is still very much in use, thank you. AMTOR is pretty much dead, I
am told. Of course what really drove all that was PC/soundcard setups becoming
affordable.

>Did these changes come about overnight? No.

Actually, the change from spark to CW took only a few years.

When hams got back on the air in 1919, the dream station was a 200 meter spark
kilowatt with rotary gap, kickback preventer, etc. Good for 1000 miles when
everything worked. Within 5 years such a station was an antique, replaced by a
CW set on the shortwaves (80, 40, even 20 meters) using a tube of much lower
power but much greater performance. Two things convinced hams of that era to
change: the 1921 Transatlantic Tests, where the superiority of CW vs Spark was
demonstrated in the number of stations heard by Godley in Scotland, and the
first shortwave transatlantic QSO in 1923 (1XAM and 1MO to French 8AB on 110

meters).

It wasn't lectures or laws that got hams to change, it was demonstrations by other hams.

>Did OTs bitch and whine? Yes.

Where you there? I think not. ;-)

>> 1927, even though it was essentially abandoned by hams by 1923 or 24.
>
>Nobody is proposing a regulatory change that will prohibit or in any way
>restrict the USE of Morse ...

OH YES THEY ARE!!!!

Check this out from ARRL's coverage of the VEC gathering:

"Maia's proposal suggested upgrading all current Tech and Tech Plus licensees to General and allowing their use of all bands. Beginner licensees should be granted call signs from the NA-NZ#xxx call sign block, he said. Both Maia and Neustadter suggest ways to streamline the number of license classes. Maia offered up the possibility of asking the FCC to eliminate the Morse testing requirement immediately, easing code exam format restrictions"

here it comes:

"and giving serious thought to dropping CW-only subbands as well."

The only CW-only subbands are on 6 and 2 meters. I don't think those are the subbands Freddy wants to drop. I think he means "CW/data subbands" - on HF.

>all that's being asked for is to eliminate the
>test requirement that even the FCC and the IARU admit are not in the
>best interest of the future of ham radio.

That's what YOU propose. W5YI & Co. are already on the next page.
>
>Nobody is being forced to do anything ... in fact, the proposed/anticipated
>change will STOP forcing folks to do something that many don't want to
>do ...
>
>So, the "None of these were forced on hams by regulatory change." argument
>doesn't hold water Jim.

Sure it does. The point being that none of the historic changes you cite involved rules changes.
>
>> AM is still popular on HF - in fact, more popular than 20-30 years
>> ago. What caused hams to abandon AM in large numbers was the simple
>> fact that an SSB transceiver was less expensive than an AM
>> receiver-transmitter combo of equal effective power. That transition
>> also drastically reduced the amount of homebrewing done by hams.
>
>What drastically reduced the amount of homebrewing done by hams
>is a combination of the following:
>
>1) technology got more "complicated" for the uninitiated

And for the initiated. Yet we hams are supposed to keep up with technology, are we not? A lot of the reasons given for dropping the code test by NCVEC are about "technically qualified persons" and "advanced technology" and all that. Yet what does it matter how "technically qualified" someone is if all they do as a ham is use manufactured equipment in well established ways like HF SSB? What is the essential difference between a Ph.D in EE ham using a Yaesu and a bus driver using an Icom?

>2) parts got harder to buy at reasonable prices in small
>quantities

Not really. Compare the cost of parts in old catalogs compared to new ones - then adjust for inflation. $100 for a ham rig in 1958 doesn't sound like much until you realize that back then $5200/year was a good middle class annual salary. At that level, $100 was a week's gross pay.

Of course if one is used to seeing the prices paid by manufacturers for quantities in the thousands and up range, the single-unit prices are outrageous. Always been that way. Which is howcum Heath could undercut homebrew on things like power transformers 40+ years ago.

>3) the performance and quality of "store-bought" gear
>improved and at the same time the cost in (adjusted) $
>dropped dramatically.

That I can agree with - sort of. The best-performing HF transceiver for under $2000 today, however, is a kit.
>
>Heck, you can buy a decent 2m transciever for $150 today
>... something with performance, quality, reliability, and ergonomics
>that the average ham couldn't duplicate for 3x that price when
>buying parts in small quantities.

And it's a throwaway.

>Does that mean I think homebrewing should roll over and die?
>CERTAINLY NOT ...

But how will homebrewing survive? How many amateur radio HF or VHF transceivers have you designed and built, Carl? If it's not worth your time and effort, how

can the rest of us be expected to do it?
>
>> > the introduction of the no-code Tech license;
>>
>> Which has not resulted in greatly increased longterm growth nor a
>> techno revolution.
>
>If it weren't for the thousands of hams who have entered via the
>no-code tech license, the ham population would be something
>like 1/2 what it was in 1990 ...

That presumes none of them would have gotten licensed if the rules hadn't changed. That's not reasonable. You're saying that we'd be down to ~257,000 hams by now if not for the changes to the Tech.

For a historical context, here are some numbers on the growth of US amateur radio in the past 30 years or so. All numbers are rounded off but are accurate to within 2%. Sources are various Callbooks:

US Hams:

1970: 270,000
1980: 350,000
1990: 514,000
2000: 680,000

Growth Rate:

1970 to 1980: 29.6% (120,000 net growth)
1980 to 1990: 46.8% (164,000 net growth)
1990 to 2000: 32.2% (166,000 net growth)

Oddly enough, percentage growth slowed down after the introduction of code test waivers and the Tech lost its code test. The total net growth in the '90s was almost exactly the same as in the '80s, even though the US population was larger.

Do you have numbers to disprove the above?

Since the restructuring of 2000, we're up about 12,000 hams. In three years and three months.

And no techno revolution, either. Who gave us PSK-31 and APRS?
>
>When you start out with an old, greying demographic (and I'm
>no "spring chicken"), if there are no newcomers, the population
>can only drop dramatically.

Sure. But you assume there will be no newcomers solely because of the code test. The facts say differently.

> >
> >
> >
> If true, it doesn't mean that the FAA doesn't let the FCC borrow their
> equipment
> from time to time.

It's been explained elsewhere in detail. The FCC usta need serious
real estate for their old monster rhombic antenna farms. They also
needed office & lab spaces for the operators and administrative staffs
at their monitoring stations. Technology has marched on. The rhombics
have been replaced by much newer and far more compact types of
high-performance antennas which has in turn has freed up most of the
former FCC real estate for other gummint users like the FAA.

The current realities are (1) There are no more FCC monitoring station
onsite staffs and labs in most cases, those have been replaced by
high-speed digital gummint networks. (2)It appears that, based on
highly knowledgeable other's inputs on the topic, that the FCC
monitoring equipment space requirements have been boiled down to
something akin to a rack of radios and computers in a gummint spec
Sears back yard tool shed and maybe a tower or two. How many acres
does THAT take??

The fact that the FAA now shares some chunks of real estate with the
FAA means squat, has nothing to do with nothing.

What the hell, for all we actually know the Social Security
Administration has moved one of their field offices into the former
FCC monitoring station buildings and the EPA has planted an unmanned
networked air sampling monitoring station on the roofs. That would be
typical of the way the feds have managed their real estate holdings
going back to post-colonial days.

>Perhaps the difference here is that Carl is seeking "exalted" status,

Wrong. I've yet to see any indication that he seeks any such
status. He doesn't really need to because he's had it for
apparently a significant number of years, and seems a bit modest
about it to boot.

>and I'm not. I have never, in seriousness, described myself as anything
>other than an "average" radio amateur.

Yeah sure. Don't you even read the crap you post Larry. That
article was filled with it, an this article was filled with it.

Anyone who hasn't done what Larry Role has done, is a nobody who
is an inferior Ham, is less than qualified, and probably should
not even be allowed to operate a station.

Who do you think you're kidding. You've been parading yourself
as the yard stick with which to measure what public service is,
what a good cw operator is, how difficult cw is to learn, what
cw speed an Extra Class should attain, how people can and should
learn cw, (repeat all of the previous, but swap radio theory with
cw), (repeat all of the previous, but swap diversity with radio
theory), and probably two or three things I missed.

Chuck it Larry, you don't come close to Carl, and you are never
going to be Mr. Average Ham, or "The Stick We Measure By" no
matter how often you crow.

>>So the *only* way, in your demented opinion, to be a great Radio
>>Amateur, is to retain "Morse/CW" skills... No none code

>communications skill of Morse/CW proficiency,

You've misspelt "useless", again.

Look, I *love* CW. But I'm not stupid enough to think it is
ever going to be useful for anything other than my personal
satisfaction.

I mean, whoop dee doooooo. Larry Roll and Floyd Davidson can
both listen to a repeater ID itself and know what the callsign
is! We can also tell what kind of gibberish they use in a movie
when they send code.

Boy, that is one really great "communications skill", ain't it!
We can also exchange information in the slowest possible way at
a time when actual communications is needed if we were dumb
enough. Instead, you and others practice for the day when you
in fact *don't* do that, and instead use a decent communications
media because if you don't someone will suffer. (I was once upon
a time *very* much involved in the communications aspects of
Emergency Medical Services delivery, and have somehow *never*
heard of any potential use for cw. If you need an explanation
of why that is, I'd be happy to enlighten you.)

> and I do require then
>to at least acknowledge this as a meaningful difference between
>themselves and hams who do possess this skill.

So you admit using your own miniscule stature as the measuring
stick.

(Two minutes of empty space is provided here, while our readers
control their laughing and regain their composure after rolling
on the floor.)

(Note that the space was compressed using a modified Lempel-Ziv
coding, which Larry may or may not be familiar with. But that's
how we got 2 minutes squeezed into only 5 empty lines. :-)

>>No hobbiest who forgets Morse code 10 or 20 years after passing
>>the test could then be a better ham than you.
>>
>>Why? Well, it seems to be that you still know Morse, so they

>No, I have stated that they are missing (or not using) a valuable
>communications skill -- a skill which confers practical communications
>capability under conditions which render other modes unusable. This
>is a proven, verifiable truth -- but only CW users know it to be so.

Damned man... I've been able to use cw for 40 some years. And
I've spent all of that engaged in the business of
communications. But not one time in 40 years did I *ever* need
that skill you claim is valuable.

And I know a few hundreds of others in the business, some of
whom could use code, some of whom could not, but none of us
ever did.

You don't suppose you could just plain be wrong do you????

>>And they *must* explore and adopt new modes!
>
>The Radio Amateur's Code states: "A radio amateur is PROGRESSIVE…
>with knowledge abreast of science, a well-built and efficient station and
>operation above reproach." -- Paul M. Segal, W9EEA, 1928.

Well goodness, ain't that great. A ham should know about tubes as
well as spark gaps! Impressive.

What do you know about Vertubi encoders, or Reed-Soloman coding?
Can you explain what "cross-pol" interference means? Or would
you have any idea why mu-law PCM coding results in a signal to
noise ratio of 37 dB because of quantization distortion?

Or are you like Extra DICK and can't understand why 20 wpm cw
working fine on a receiver with a 200 Hz bandpass filter when
a PKS31 signal doesn't work is *not* proof that cw can get through
when PKS31 cannot?

Somehow, "progressive", or "up to date", or whatever it is you'd
like to call it, is *not* an objective measure. Whatever *you*
want to use as the stick for others is going to be nothing more
than an expression of the bias that Larry Roll brings to the
table.

The fact is, Carl can probably run circles around you in many many
areas, but I don't hear him claiming that *his* expertise should be
the measure of whether you or anyone else should have a ham ticket.
I only hear you and DICK and a few others doing that.

>>So they can't
>>stick with AM, or SSB, or Slow Scan, or RTTY, or NBFM, or AMSAT,
>>or whatever (even though they *must* continue with CW), but
>>instead have to jump to whatever is the latest and the greatest.
>
>What part of the above excerpt from the Radio Amateur's Code
>suggests that "sticking with one mode" is "progressive?" I don't see it
>that way, and I'm sure that W9EEA wouldn't have, either.

I don't think you speak for W9EEA. Or anyone else for that
matter. I can't see anything at all wrong with someone sticking
with one mode for their entire lifetime. And in some cases,
that may be *extremely* progressive... if, for example, they
tend to move that particular mode itself forward.

Once again, you are just trying to use Larry "I'm the One and Only
True Measuring Stick" Roll in a roll where he won't bounce.

>>(BTW, what *is* the latest and greatest that everyone should be
>>doing? I'm collecting old brass triumph style straight keys and

>
>Pursuing the collection and use of old equipment is certainly a
>popular pastime among radio amateurs, but if it is done to the

>exclusion of advancing your communications capabilities to include
>more modern, digital modes, then you are only serving to foster the

Oh, digital modes! Why would I do that for a hobby Larry? I've
done more with digital communications that you've ever imagined
to exist. If I want to relax, I'll play with keys and tubes!

>impression the public has that radio amateurs are, in fact, outdated
>and NON-progressive. Is this an image you want people outside the
>ARS to have of us, particularly in light of present and future
>challenges to our spectrum allocations?

That from a guy who probably hasn't got a clue what benefit
there is to multilevel digital encoding, has probably never
heard of a bandwidth limited Gaussian distribution, and who
probably couldn't even define what "digital" is in comparison to
"analog" and be expected to get it right.

The point, of course, is that you don't have the background to
be deciding what is or is not appropriate for others.

>>> Their stations are truly up-to-date,
>>
>>I can't even begin to define what "truly up-to-date" is. I know
>>some really great hams that just dearly love to use only old
>>tube type equipment.
>
>And their "love" is both self-serving and likely to be detrimental
>to the future of the ARS.

And your love of cw, to the point of demanding that *all*
Amateurs learn it, is somehow beneficial to the ARS????

You have never studied logic, have you? (It helps if you
actually want to use digital communications to have some
understanding of Boolean logic. But to post articles to Usenet,
you'd best learn a little deductive logic first.)

>>I had an email conversation with an old
>>Internet friend the other day, who just dearly loves to use and
>>work with old AM transmitters!
>
>Too bad you didn't have that QSO on PSK-31, instead!

Oh, trust me, this old fart knows more about digital communications
that you and me put together multiplied by at least 2 and then some.

Not that *you* added anything significant to that total, but...

Was it you or someone else who posted a while back in one of
these groups that cw was an analog method? It probably wasn't
you, but your the kind of guy who would say that.

Maybe Len Anderson needs to step in and beat you with a sticker
for a day or two!

>>He can't, in your world, be a good Ham.
>
>Probably not.

He's been licensed longer than I have, and was engineering the
stuff you think is "progressive" before you'd ever heard of it,
and since then has moved on to things you might learn something
about in the next decade or so as you catch up.

But you don't think he can be a good Ham...

Get a grip on yourself and take a reality check Larry!

>>I'm going to have to
>>tell him that after 50 years, he's not an OT, he's a waste in

Someone is conginuously complaining about something at all times, within
ham radio or outside it.
You've done more than your share of it bitching about the code test for
at least two decades..
But that has never been the pertinant fact in this debate. Your entire
contention is based on a single fact - some of us, not so old at that,
support a code test of some sort for HF ham radio access. So
ON THAT BASIS AND NO OTHER you continuously berate, denigrate and
outright LIE about us, our qualifications, our operation on ham radioi
and any other non-fact you can dig up that you think may play to your
audiance of other codehaters. You are a shameful character Carl, and
that's a fact. When you have to lie like you have all along, and still
do, any validity you may have evaporated long ago.

>

BS! Neither body has indicated any such thing. They just as wel;l have
said that written testing on technical subjects has no place in
regulations either. You go FAR out of your way to conclude that CW has
no communications applicability today when there is almost as much
activity on CW in the HF ham bands as any other mode. That's plainly
dishonest .
You hype all the latest technology for hams but what do you do frst
thing out when you finally get the codeless Extra? Jump right in on
SSB working DX, and forget all about all your glowing digital plans.
You're the poster boy for saying one thing and doing another.

>

>like 1/2 what it was in 1990 ...
>
>

I doub that statistic but no need to bother analyzing it since I
personally have tested more than a few no-cide techs into ham radio.
There's got to be some entry point, and with the Novice enhancement
giving them and Tech Plus voice on 10 meters they abandoned CW (that
plan that I believe was designed to lure CBers and Freebanders into ham
radio-after all, they would be able to legally work SSB in the same part
of the spectrum If all them got Novice licenses the Freeband would close
down. Didn't pan out). What wasn't considered was that codehaters hate
it even at the most basic level.

>When you start out with an old, greying demographic (and I'm

>

Most new hams today are "greying", sorry.THEY're the ones with the
time and money to indulge themselves in such things. Kids today are too
busy with instant gratification things, by and large, but still some
catch the fever.

That's about how long I fooled around with CB until I got a ham license back in the
summer of '76. The old tech license, now known as the "old tech plus", general
written and 5wpm receive *AND* send. Took my test at the FCC field office in
NYC back then. A few years back I upgraded to an "extra lite" :-) Took the
advanced and extra writtens Jan 2000 and cashed in the CSCE's on restructuring
day.

No, they want people to see and hear exactly what BPL means. There can be a future for HF amateur radio so long as some people go and prove that some technologies are incompatible with HF communications. I certainly hope that large business doesn't get their way too often or one of these days folks will discover just how vulnerable the large infrastructure for telephones and the internet are. BTW, that file is over 7 MB and I'm glad I'm on broadband :)

>
>

No wonder you dipschitz are such poor hams - you havve no idea what ham radio is actually about. Yep, I said that Shannan's law really has nothing to do with ham radio, and then I proceeded to describe a case that proved it .
That was the time when I heard several European stations working PSK31 on a nearly dead 20 meter band, but was not able to lock and print any of the PSk - but the CW Id'er came through loud and clear, completely copyable Seems that polar phase shift was corruptng the PSK signal.

Of course Cecil declared that to really compare we had to 'Level the playing field by forcing the CW through a 30 cycle filter. So why would any HAM attempting to complete a contact on the air,.want to do that, so as to make the CW uncopyable as well?
No one with any sense, but of course that leaves you all out.

So it's no surprise you can't really understand nor enjopy ham radio. You can't function outside the theoretical. Ham radio is about "HAM RADIO OPERATORS OPERATING! Sure, technical issues have a large part to play, opn some level. But Shannon has about as much applicability to every day ham radio operating as applea and oranges. My experience that morning proves it.
When you get all that latest digital gear built and on the air, then *IT* can become the object of
comaparison. What, youir' STILL not working on it???

So you see, (No, you won't see but I'm suret many readers will) Shannon and his theories are the domain of the laboratory, not the province of ham radio operaters attempting to make long haul radio contacts. I know, such talk is Luddite blasphemy, but that's the way it is! And there is no surprise whatever in the fact that you fail to undestand, the both of you.

Nothing to do with ham radio, eh? No wonder you can't figure
out what ham radio is!

When I first read the above I didn't realize that your "case" to
prove your statement was in fact what I'd already read, and I
was thinking there was a really, really funny part of that
thread that I hadn't gotten to on google yet. Then I read the
rest of this, and realized that you think your cw/psk31
comparison is the proof. I've already read the funny part!

I thought you where an Extra Class DICK? Do you have any idea
what Claude Shannon wrote? Is that one formula the only part of
it you've ever seen? Are you, EXTRA DICK, so ignorant of the
very basis of what the ARS is all about that you don't even know
how Shannon's work applies to it?

And *you* claim removing the CW test is going to dumb down
the ARS!

>That was the time when I heard several European stations
>working PSK31 on a nearly dead 20 meter band, but was&#65533; not able

>filter. So why would any HAM attempting to complete a contact
>on the air,.want to do that, so as to make the CW&#65533; uncopyable
>as well?

Well, just for starters, if any ham wanted to compare CW with
PSK31 to see which was the most efficient, *that* ham would be
the one who'd want to level the playing field. That ham would
also want to be well versed just what level means in
communcations, and the best source of information on that
subject... is a well known paper from 1948 titled "A
Mathematical Theory of Communications" by Claude E. Shannon.

I just can't imagine doing anything with digital communications as a hobby, meaning for the fun of it, and _not_ spending some time studying Shannon. My only regret is that I know there is a large volume titled something like "The Significant Works of Claude E. Shannon", and I don't have a copy of it, nor do I have access to one. I did sit in a library once, years ago, and forgot to go home until they threw me out because I'd discovered it on a shelf...

[In all seriousness Dick, if you would like a pdf copy of the 1948 paper, I can email it to you or anyone else that would like to have a copy It's something like 560k in size.]

>�No one with any sense, but of course that leaves you all out.

So you are saying that (where did I hear this before??? :-) if you are using a 1 watt CW rig and can't make a contract, I can easily prove that SSB is a better method by merely firing up a 1KW SSB rig and making a contact.

Okay, so now (thank you Cecil) we know that SSB is better than CW for getting through when the "polar shift" is significant. (Polar shift being something I hear a little more often than you perhaps.)

>�So it's no surprise you can't really understand nor enjopy ham
>radio. You can't function outside the theoretical. Ham radio is
>about "HAM RADIO OPERATORS OPERATING!��� Sure, technical issues
>have a large part to play, opn some level. But Shannon has
>about as much applicability to every day ham radio operating as
>applea and oranges. My experience that morning proves it.

Well there actually is a comparison to made about enjoying ham radio with Shannon or with apples and oranges. Those last provide food, and if you don't eat you won't be able to enjoy much of anything. Shannon is food for thought, and if you don't understand the basics of Information Theory, there is much of the ARS that just wouldn't be as much fun at all. QRP, CW, RTTY, PKS31, and a lot of other things being examples.

>�When you get all that latest digital gear built and on the
>air, then *IT* can become the object of comaparison. What,
>youir' STILL not working on it??? So you see, (No, you won't

I've operated just about as much state of the art digital gear as I ever care to look at again. Why would I do that for a hobby? Why wouldn't I pick out some aspect of radio communications that I consider to be *fun* (for me, not for you or Larry "The Stick" Roll) and persue it. My goodness, it could even be vhf (no DXCC), AM (not digital), and could still be as enjoyable for me (or whoever) as anything the two of you might be doing.

But you DICK, a fellow who doesn't even understand the
theory of what we are doing, say I'm not up to snuff as
an Amateur operator... snicker.

>see but I'm suret many readers will) Shannon and his theories
>are the domain of the laboratory, not the province of ham radio
>operaters attempting to make long haul radio contacts. I know,

If you want to pass information, Shannon is part of it, and
understanding what he said can only increase an operator's
ability and enjoyment of communications as a hobby.

>such talk is Luddite blasphemy, but that's the way it is! And
>there is no surprise whatever in the fact that you fail to
>undestand, the both of you.

>"Don't bother, they're here!"

So, what we get down to is Extra DICK don't know Shannon from
Shinola. What a hoot.

>
> Other than Field day, an event does not HAVE do be scheduled during Fri, Sat
> night. Most people would do more recreational activities during that time.

Vipul, the average American WORKS Monday through Friday with
Saturday and Sunday off. When would YOU schedule these "activities"?
Most club meetings (lasting 1-3 hours) ARE scheduled during the week,

sometimes with some pro-social activity included.

> Its only because Hams are the type of people that would be at a Hamfest or
> operate Sat night. My former co-worker, the Ham that introduced me to a
> Hamfest, was fairly anti-social too. Also, he made weekly coffee trips to
> Starbucks (alot of calories).

Well there you go...we'll blame the whole thing on too much
caffiene and too much calories.

> He is now out of the country. He is American, and
> he married some Asian girl he met online and he quit his job and moved over
> there.

Lucky him.

> >What does it matter, Vipul? The event was not organized for "the
> >non-ham observer".
>
> Sometimes they do try to sign up new members there. The anti-social aspect
> would put off the person considering the hobby. That's a reason people turn
> away.

WHAT "anti-social" aspect, Vipul? YOU call it "anti-social"
because you do not understand it or refuse to participate in it
because they are not doing it the way YOU think it should be
done...YOUR loss.

> >> Most (non-Ham) Americans would expect the Hams would take a break from
> >> operating on Sat night. They would be surprised and disappointed otherwise.
> >
> > Why? Why should "they" expect Amateurs to stop doing the very
> >thing the special even was organized to do...?!?!
>
> The event more than fulfilled what it was organized to do when they operated
> all day with few breaks. It was not necessary to go all night as well. They
> could have taken at least a few hours break to do some vacation activities.

So the other operators who work days and can only get on the
radio in the evenings should of been denied the chance to "work" this
station just because they had a day job? Foreign operators on the
other side of the world should have been denied the chance to make a
contact just becasue of thier location?

That's very bigoted, Vipul. VERY bigoted...AND selfish on YOUR
part. Your whole rant in this forum is based on your perceived
exclusion from certain actitives, yet YOU would do things to excluded
others from being able to participate in Amateur radio.

> That's what most (non-Ham) people would do. Even another hobby group would take
> a break from that hobby on Sat night and enjoy some of the vacation activities
> at a vacation location. Its only Hams that would continue operating Sat night.
> They saw other Hams on ATV, but not other people in person. I don't expect that

> you would understand that most people would be disappointed with that.

This activity was organized and executed for a certain purpose, Vippy...Activating that location for whatever program they were participating it. It was not chosen for it's tourist highlights or to satisfy "non-Hams" perceptions of what this is all about.

Furthermore, the very characteristics of HF operation generally dictate better propagation and long-distance communication opportunities at night.

Other than Amateur Astronomers, I can not think of any other "hobby group" that does better at night than in the daytime.

THAT is something I don't expect YOU would understand. You don't have the experience in Amateur Radio, and it's obvious YOU do not understand propgation characteristics that dictate these needs. No wonder you're no longer an "EE"...
(choking back laugh of Vippy having ever done ANY electrical "engineering" work)

Steve, K4YZ

Hee hee, my apologies for getting in a hurry. I 1) don't relate spelling to word sounds the way most people do, I just see the word as a symbol and can misspell the same word forty times in one message, plus 2) I tend to type about 10 words behind where I'm thinking.

I was rushing to do something else and didn't check that article over well enough.

Regardless, two missed spellings in a 300+ line article isn't bad on Usenet.

>> or Reed-Soloman coding?
>
>No spell-check, huh? Oh well, I haven't either. That's OK.
>
>For those who don't know these terms and are trying to look them up he
>means Viterbi and Reed-Solomon, though.

Exactly... Andrew Viterbi, to be exact. And author of a paper entitled "Error Bounds for Convolutional Codes and an Asymptotically Optimum Decoding Algorithm," published in 1967.

Commonly seen in convolutional forward error correction systems, which is to say most high speed modems used in the communications industry today. It is a serial data error correction scheme.

Reed-Solomon, as opposed to Viterbi, is a block error correction scheme. It is also very commonly seen today, on DVD's, in cell phones, and many xDSL Internet service schemes.

I don't really think either of those are something the average ham operator might even have ever heard of, much less recognize.

>> Can you explain what "cross-pol" interference means?
>
>I can't either. What is it?

Exactly what it says it is. :-)

Any ham should be familiar with it at least in theory, though
it might not be something everyone recognizes instantly.

>> Or would
>> you have any idea why mu-law PCM coding results in a signal to
>> noise ratio of 37 dB because of quantization distortion?
>>
><SNIP>
>
>Post the proof. I'd like to see it.

It isn't a proof! What you can get is the design specifications
for PCM, and take a look at the channel characteristics of the
quasi-analog channel provided by a PCM digital carrier system.

However, on both of these last two, for those of you who
actually are curious, just hold on for a bit and lets see what
Larry has to say. Then I'll be quit happy to post whatever
amount of detail anyone wants to satisfy their curiosity.

(Anyone who wants a big broad hint though. The Starband
satellite Internet service is quite concerned about cross-pol
interference, and everyone with a v.34 modem is very interested
in that 37 dB SNR.)

However, just be careful that the point is not missed. You or
Larry or anyone else may never have looked into PCM, for
example, and the 37 dB figure may not ring any bells, nor
perhaps would the term quantization distortion. Carl, can come
up with things I've never heard of too. We are not suggesting
that written tests for the ARS should reflect the level or even
the direction of the knowledge base any given person might bring
to the table, and these are examples of why Dick and Larry
should shitcan the idea that their experiences are somehow a
measure that someone else should live up to. If we did use that
criteria, they'd have to live up to my experienced and Carl's
experiences, since they have both made disparaging remarks about
our abilities as Amateur operators.

I didn't *have* to go back 35 years, I only went back 35 years because
everybody knows the Don Miller story. I need to point out here that,
quite contrary to the folklore about the "ethical purity" of the
brass-pounding OFs of yore, that it was those sainted OFs who blitzed
Miller. And they were not refugees from 11M or any of the current crop
of codeless wonders. They *all* hiked uphill both ways thru blizzards,
etc., etc. . . .

As far as the 35 year thing goes I only have to go back to a club
meeting this past June for a current example. A well-known two-lander
who is in the habit of busting CW contest records has a couple CW
stalkers up his butt and described the annoying situation.

I fully agree that the bullshit level in the CW portions of the bands
is much, much lower than it is up the bands. But the same kinds of
bullshit certainly do exist on the low ends. This is not a digital
black and white world, it's all shades of gray. I take umbrage with
those who over-hype CW on the basis of the purity of the souls who
practice the art & science. It just ain't so, we're all just people.

I'm reasonably conversant on the topic of HF propagation, I hold
5BDXCC #142 dated April '72. Which I had before I got into working
with this TW group. This is a densly populated region (Philly) and
there were/are enough garbage mouthed CB locals to jam the TW comms
without any help from distant skip-shooters.

SSB. Any channel which seems to have intelligent life. Maybe I'll take
another look in a couple years.

on 40/80m CW? (mostly 40 ... things like Johnston Is. from SoCal with
3W)

> and proficiency

No, I have not maintained proficiency ... but neither have a LOT of
code-tested
hams ... but for you, the fact that they passed (long ago) a higher-speed
Morse
test makes them forever OK ...

> in Morse/CW, which I consider to be one of the most useful communications
> skills in the radio amateur's arsenal.

That's just your opinion ... others find it slow, cumbersome, and boring ...
even when they HAVE achieved proficiency at 13 wpm+ ...

> I have always acknowledged your
> superior, professional-grade technical skills, and those of all other hams
of
> all license classes who possess them.

When it suits you, it seems ... other times, we're "lazy, knuckle-dragging,
looking-for-a-freebie," etc.

> However, I must reiterate, this is the AMATEUR Radio Service.

Read the FCC's view of what it's about ... particularly in the R&O
in 98-143 ... they say it's "primarily a technical service" and that
continued Morse requirements "do not comport with the purpose."
The fact is that while hams collectively and individually define what
happens in the ARS, it's the FCC that defines what SHOULD happen.
If we don't live up to those expectations, we are at risk.

> The ARS has a long-standing tradition of
> requiring proficiency in the use of the Morse code,

SO WHAT? We've been down this road before ... it is NOT the
FCC's legitimate regulatory purpose to prop up "tradition."

> for the purpose of
> permitting radio amateurs to exploit the many benefits and advantages of
> that particular mode. I have consistently stated that I feel that this
skill
> is
> important enough to radio AMATEURS that it simply cannot be replaced,
> even with technical skills which exceed licensing requirements.
>
> This is my opinion, Carl

That is correct ... it is you opinion ... nothing more. There is no law
that I know of that requires that your opinion correlate with reality.

-- not a demonstration of any lack of due respect.
> I would expect a person of your intelligence to recognize and acknowledge
> the difference. Moreover, I have never held myself out as anything more
> than an "average" ham, with the notable exception of occasional hyperbole
> used in this newsgroup (and nowhere else) to push the buttons of
particularly
> intransigent fellow participants, including your own good self.

Larry ... if you took a poll, I doubt that you'd find that those you've
demeaned
with your "hollier than thou" attitude and demeaning attacks on their value
as
hams would take your comments as "hyperbole." If it were once in a while,
with a "smiley," one would reasonably take it as hyperbole or "just pulling
chains." However, you have *quite consistently* expressed those views
and demeanded folks that you obviously consider "lesser hams" over a period
of something on the order of 5 years now ... with you it seems to be the
rule,
not the exception.

> I expect you to recognize and acknowledge that difference as well.

I acknowledge that there have been occasions when you have opined that
I know quite a bit about radio ... but, as stated in my previous paragraph,
those pale by comparison to the insults to just about anyone who doesn't
meet the "Larry Roll Morse-based standard of excellence in hamdom."

> I'm perfectly willing to live with the fact that we don't see eye-to-eye
> re: code testing.
> Are you?

Sure ... you have a right to your opinion ... I respect that right ... but
you do ham radio a great disservice with your elitist attitude and demeaning
comments towards those who don't share that opinion.

Sorry OM, I didn't mean to "lecture" re. HF propagation. Just relating my
own personal experiences. Sorry to hear about the garbage mouthed locals.
The only real problem I've experienced up here is the "splatter" from the
really high powered (Multi-kW) guys running AM on ch. 6. An additional IF
filter to increase the ACR of the rig solved that problem.

So we need a new publicity mechanism ... I'd agree with that ...

> >
> >From plain RTTY to things like AMTOR, PACTOR, PSK31, etc.
> >
> Plain RTTY is still very much in use, thank you.

Yes, I know ... but that's a CHOICE, just as using CW or any other mode
is a choice.

> AMTOR is pretty much dead, I am told.

Certainly not as popular as it once was, but I don't think it's entirely
"dead."

> Of course what really drove all that was PC/soundcard setups becoming
> affordable.

Agreed ... multimode with a std SSB radio and PC ... cool stuff. However,
still limited in some respects and we can do better with purpose-made
RF modems capable of more speed and other improvements.

> It wasn't lectures or laws that got hams to change, it was demonstrations
by
> other hams.

The point I'm trying to make is that there is a BIG difference between
wholesale abandonment of a mode (Spark -> CW, AM -> SSB)
or the outlawing of a mode (Spark) than there is in simply removing
the Morse test requirement.

Removing the Morse test requirement does not take away any operating
privs from anyone ... it does not disallow the choice to use Morse. It
simply removes a requirement that is extremely dissinteresting (and in some
cases difficult) for many people.

There's a BIG difference in the comparisons.

> >Nobody is proposing a regulatory change that will prohibit or in any way

HF.

I think that Fred knows quite well that the only CW-only subbands are at
6m/2m.

Besides, that is ONE petition of a number that have been/will be filed.

While I will not divulge the detailed contents of the draft NCI petition
that
is under Board review right now, I *will* guarantee you that it will NOT
propose any changes in band segmentation.

> >all that's being asked for is to eliminate the
> >test requirement that even the FCC and the IARU admit are not in the
> >best interest of the future of ham radio.
>
> That's what YOU propose. W5YI & Co. are already on the next page.

It's not fair to single out W5YI ... its the NCVECs ... including reps from
ARRL and all the other VECs ... one of whom used to be "top dog" in
amateur regulation at the FCC.

> >Nobody is being forced to do anything ... in fact, the
proposed/anticipated

> >So, the "None of these were forced on hams by regulatory change."

argument
> >doesn't hold water Jim.
>
> Sure it does. The point being that none of the historic changes you cite
> involved rules changes.

The elimination of spark did ... and my "None ... by regulatory change" was
meant to indicate that eliminating Morse testing will not force ANYTHING
on anyone by regulatory change.

> >Heck, you can buy a decent 2m transciever for $150 today
> >... something with performance, quality, reliability, and ergonomics
> >that the average ham couldn't duplicate for 3x that price when
> >buying parts in small quantities.
>
> And it's a throwaway.

I would respectfully disagree ... the idea that "hams can't work
with SMT" is bogus ... the ARRL website has a lot of good info
on working with SMT ... and I've built a LOT of prototypes in
the lab by hand using SMT without special, expensive tools.
It just takes a different technique.

> >Does that mean I think homebrewing should roll over and die?

Now that the WRC is over, my business travel schedule will be less
demanding (hard to work on home projects when you're away from
home for 5 weeks).

My first priority for the rest of the summer/early fall is to get up
at least one, preferably two, tower(s) and some better antennas
than what I have now for HF, plus a good set of VHF/UHF
antennas ...

Once that is done, or work stopped due to weather, I plan to
get down to brass tacks on designing/building some gear. It
will NOT be "conventional," but it will be designed to be amenable
to reduction to kit form for those who'd like to build their own.

WRONG!!! How about some accuracy in your quotations? FCC says they
consider the ARS
as "still FUNDAMENTALLY a technical service" BIG difference. Of course
it's *fundamentally*
technical-even if one only uses CW and a old tube rig. BuT it's not
funamendally technical. It's fundamentally about operating. THAT is
what your license allows you to do. You can build anythintg you like
legally as long as you don't operate it on the air, nor sell it in some
cases, with NO hint of a license of any class.

> and that
>continued Morse requirements "do not comport with the purpose."
>

Not what they said at all. They said "does not fulfill a reguilatory
need". Anothe big difference.

>The fact is that while hams collectively and individually define what
>happens in the ARS, it's the FCC that defines what SHOULD happen.
>If we don't live up to those expectations, we are at risk.
>

Even more nonsense! FCC hands out licenses with NO requirements to ever
do a single thing witht
them. All the FCC does is decide the qualifications, if any, and issue
the license. Unless one fouls up in some really radical way you'll never
hear from them again.

>

>SO WHAT? We've been down this road before ... it is NOT the
>FCC's legitimate regulatory purpose to prop up "tradition."
>

Depends on more than just tradition, but therei **IS** much more than
tradition involved in radiotelegraphy. Commercials changed to more
efficient modes for mor than on reason, one of
the most important was longterm personnel costs. Read all about it in
the literature. Of course
there are many other advantages to some of the high tech systems, when

they work as intended.
That isn't all the time, by the way. The change is understandable and to
be expected. What is not so clear at all is that ham radio should do
away with radiotelegraphy, and don't harangue us with your
"No one wants to do away with CW" nonsense again, please! Just read what
your buddy W5YI
wants to do in the latest ARRL letter.

And there's no law, manmade nor natural, that says that either you OR
the FCC has to have the inside track on reality.

Well isn't this something special! Two clueless alleged "professionals" and a village idiot, all claiming expertise when not a one of them bunch has ever put a rig on the air running PSK31! How compelling!

Beyond that, the two "professionals" seem bent on insisting that Shanon's work is some sort of holy grail when all it actually is a *mathematical analysis* that can be applied to any communications system .

But it's curious that they insist that Shannon's work is vital to everything communications, when he didn't even do it until 1948, and it was't regarded as being very useful until the digital age. I suppose they feel that invalidates all radio from that time back past Marconi!

For sure it had nothing to do with conditions on the air on 20 meters that morning when I was able to copy all the CW id's being sent by the PSK stations, but conditions prevented the PSK from being received, not a single character. And unlike these three simpltons, I was a very early user of the new PSK31 mode when it was first realeased.

Dear old Frostbite Floyd says he was licensed over 40 years ago but, sadly, he spent all his time doing "professional" things and abandoned ham radio until he found this NG a few weeks ago. So he's a real "Expert". Right.

That's all I'm saying.

Nobody's perfect, and no mode or test or fancy hardware/software will
make everyone behave perfectly 100% of the time.

> 40m, when I'm looking for stations listening up

40 m is a band, not a frequency. Big difference between plopping down
an SSB signal on 7030 and 7230.

Certainly a possibility. Long CQ isn't the best practice.

>
> > Perhaps the CQers could not hear the
> > DX 'phones.
>
> They would probably claim that, either way

It could be true, however. The US power limit is 1500 W out. 40 meter
beams are common with the big guns. There can easily be a 30 dB
difference between how well you hear a 1500 W + beam at 100' CW sig
and how well he hears your 100 W and dipole SSB.

>
> > Perhaps the DX phones were on top of US CW ops innocently

>
> Innocent/ignorant - a fine dividing line, isn't it?

Nope.

> Of course, by bandplan, the frequencies are phone too, just there, not
> here.

Which is the real heart of the problem. And it's being fixed.

> The ones who are _not_ in QSO with anyone, who keep sending unanswered CQs
> for five minutes at a time, who didn't send QRU? before calling.

Nobody sends QRU? before calling CQ. (It means "do you have anything
for me?")

The textbook procedure is to send QRL? ("Are you busy?") first. But
that's unnecessarily long. A simple "?" will do the trick, or the most
common "IE" (didit - dit), all of which have the same meaning. The
reason for the shorter inquiries is so that if the freq IS in use,
less gets messed up.

It is not uncommon for me to hear exchanges like this:

Station wishing to call CQ: "IE" ("Is the frequency in use?")

Station on freq, working station the wouldbe CQer cannot hear: "C"
("Yes")

Station wishing to call CQ: "SRI DE N2EY" ("sorry, bye, ID so you know
who it was")

> > You are presuming guilt without adequate proof. Do you have any
> > evidence that the alleged violators could hear the alleged victims?

> > give a weak 'phone station?

> I'm not talking about co-channel here, I mean right on top.

"Right on top" is a lot of room. The CW signal needs maybe 250Hz tops,
the SSB ten times that.

Point is that what sounds like "right on top" may not sound that way
to the other guy.

Listen to a busy CW contest with a wide (AM bandwidth) rx and it
sounds like a pile of intentional inteference. Switch in appropriate
filters and you find that almost all of the stations have spaced
themselves so they don't overlap.

> Neither am I
> talking about weak phone stations, although they could be weak at some

>
> So, if say, you called QRU? on 7080 and there was a strong signal SSB QSO
> in progress, would you be able to tell? This is a genuine question.

I would listen first and steer clear of anyhting that sounds like SSB.
Then I'd send "IE" a few times to test the waters. If I heard
something start up when I did that, I'd move.

But usually I am below 7060. Above about 7060 is data and foreign SSB
country.

> I
> don't posses a CW filter.

One of the reasons some hams get turned off to CW is that they use
equipment that really isn't meant for the mode. Most HF rigs today are
primarily SSB rigs with CW tacked on. Some are pretty good, many are
awful.

> I am guessing you would hear something,though?
>
Depends on the situation. Usually SSB sounds like monkey chatter
through a narrow filter. But near the edges it can be very weak or
inaudible.

The best solution is for wide and narrow modes to have their own
subbands. They simply don't mix well.

A notch filter can remove a carrier or CW signal.

>
> So we need a new publicity mechanism ... I'd agree with that ...

Point is that there were downsides to the shift to SSB. From the end
of WW2 to 1963 (17 years) the number of US hams quadrupled. Then it
stopped dead and the numbers hung at about a quarter million for more
than 5 years in the '60s.

Oddly enough, growth started back up again when the incentive
licensing changes were enacted. Huh?

> > >From plain RTTY to things like AMTOR, PACTOR, PSK31, etc.

> Agreed ... multimode with a std SSB radio and PC ... cool stuff.

Sort of. But it's actually a patch job.

> However,
> still limited in some respects and we can do better with purpose-made
> RF modems capable of more speed and other improvements.

"Purpose made RF modems"?? Why not call them data radios?

And I agree - a dig built specifically for data modes is the better
solution. Deal with the decoding right at the IF level, rather than
converting to audio and all that jazz.

But somebody's got to design and build the data radios. Who is going
to tie the bell on that cat?

One reason packet is stuck at 1200 baud all these years is because
going faster would require a purpose-built data radio. Ikensu isn't
going to do it unless there's a proven market, and the failure of 9600
to get much attention means they will wait some more.

It's up to the homebrewers to make it happen. But there are not many
of us homebrewers any more.

> There's a BIG difference in the comparisons.

Sure. Apples and oranges. So it's not a valid analogy. Here's a better
comparison:

Was "incentive licensing" a mistake? It was very unpopular. Lots of
folks were against it. Said it would kill amateur radio. I remember
those times - they make this whole code-test thing look like afternoon
tea.

> > >Nobody is proposing a regulatory change that will prohibit or in any way

Sure. And I think he means dropping the CW/data subbands on HF, not
those little pieces of 6 and 2.
>
> Besides, that is ONE petition of a number that have been/will be filed.

Does NCVEC *ever* go against what Maia wants? Or are they his puppet?
Since NCVEC is not a representative organization, and is only involved
in testing, why are they getting into things like subbands?
>
> While I will not divulge the detailed contents of the draft NCI petition

Does NCVEC *ever* go against what Maia wants? Or are they his puppet?

ARRL's rep did not vote at the NCVEC meeting on the "drop the code
test" petition. Current ARRL policy would have required that he vote
against, but since that policy is under review, the rep abstained. So

the NCVEC reports the petition "approved without opposition".
>

> > involved rules changes.
>
> The elimination of spark did ...

No, it didn't. By the time it was outlawed, hams already had given it
up. The changeover went very fast, driven by the simple fact that a CW
station which cost X dollars would get much better results than a
spark station that cost X dollars. This also coincided with the moves
to the "short waves".

> and my "None ... by regulatory change" was

I agree!

> the ARRL website has a lot of good info
> on working with SMT ... and I've built a LOT of prototypes in
> the lab by hand using SMT without special, expensive tools.
> It just takes a different technique.

That's not what I'm talking about at all. My point is not about SMT,
it's about the fact that much of today's consumer electronics isn't
meant to be worked on. It's cheaper to just replace than to repair.
Lookit your PC - most of the "components" aren't resistors,
capacitors, transistors or ICs. The components in your PC are
subassemblies: drives and cards and premanufactured cables, power
supplies etc. A knowledgeable person can "build" a functioning PC from

a pile of "components" with just a screwdriver and good grounding
technique.

Sure. And that's life for most of us these days.
>

Snow will be here soon. Hard to think about that in August, but it's
on the way.

You're saying that one of the reasons for dropping the code test is to
promote growth in the number of hams, and if we don't drop Element 1
we will have no growth. Thank you.
> >
> > That presumes none of them would have gotten licensed if the rules hadn't

>
> I had intended to say 1/2 to 2/3 ... the 1/2 would be worst case ...

2/3 of 514,000 is 342,000. That's less than half of what we have now. Sorry, those numbers don't add up.

Your prediction is based on the invalid assumption that if the Tech had kept its code test we would have gotten no newcomers. Yet we had almost exactly the same growth in the '90s as in the '80s.

We may soon see what the result of dropping Element 1 will be. I predict we'll see an initial surge of new hams, then back to the same slow growth as before.

Then where will the blame be placed?

There's another angle to this "losing 11M" topic. The band was
essentially ignored by hams, we didn't lose anything in that sense.
Part of the reason was the high level of RF crud (shades of BPL . .!)
tossed out by high-powered unlicensed industrial and medical
equipment. The junk was all over the band particularly in urban areas.
A second and a big reason the band was grossly underutilized was that
there was little or no DX on 11M. Third, the neighboring 10M band at
1.7 Mhz wide had, and still has more than enough bandwidth to
accomodate anybody who wants to operate on the band without the
crowded condx on the rest of our HF bands.

> It WILL be interesting to see how many of them leap on a code-free HF
> license though, won't it?

Prolly great heaps of 'em will do it. What the hell, they'll be almost
free. But then the show will be pretty much over. There will be
noticable shifts in the volumes of Techs vs. new Generals and Extras.
And maybe, just maybe a few non-hams will jump in. So we'll see a

short, small blip in the growth numbers a la 1991-92 then it'll drop back to bizness as usual.

I'm more interested in what the new-wave codeless wonders will actually do with their new privs. Will they pop the bucks for the expensive HF gear then put the work into the antennas? Some will of course but only a fraction of 'em. The question in my mind is whether that fraction will be large enough to have any noticeable impact at all on the HF bands. I very seriously doubt it, my bet is that most of 'em won't bother, they'll stay on the machines and the only obvious results of the whole regulatory lurch will be in the nut-and-shell games in the FCC database.

Good post, Jim

I do agree with you about the antics of a few. A few Yahoo groups have started - at least one of them with the premise of no flames and everyone is welcome. I can't believe how rapidly it has grown (nor can I believe how many new licenses have been obtained). Unbelievable what can be accomplished when you get rid of the finger pointing (and the new folks, both those without tickets and those who have just obtained them are asking questions about operating procedures, antennas, coax - all the kinds of questions that so many other groups could cover if they just got past the finger pointing and flames).

I think you'll find it isn't being fixed. The ARRL bandplan is the only
one out of step, so nobody else is likely to change theirs,
notwithstanding Europe and some other areas getting 7100-7200 as
additional spectrum in 2007. All that will happen is that a DX window will

appear from 7150-7200, but the DX will continue to use phone everywhere
they use it now - indefinitely. Sorry to be the one to break that to you!

Granted. To be more specific, the CW beat note sounds in the normal range, i.e. 800 Hz +- when the SSB is tuned in. This of course would be what you would get if they netted onto the SSB and then offset by their usual amount.

> Point is that what sounds like "right on top" may not sound that way
> to the other guy.
>

It depends which side of the nominal carrier frequency the CW signal is on. However, assuming my SSB filter is working, I would say they were low, i.e. on the same side as the LSB sideband, or I would be filtering them out. This also puts them almost in the middle of the SSB signal, doesn't it?

If I need it I have an outboard audio filter (a Radio Shack DSP unit,
which is fairly basic and suffers from low audio output). I hadn't thought
about that when I said I had no CW filter. It tends to 'take off' on 20
with RF getting inside it, but it's OK on 40.

>So basically, DICK is the original No-PSK Extra.

Has Brian Burke ever
used PSK-31 on the
amateur bands?

Has Floyd Davidson ever
used PSK-31 on the
amateur bands?

Has Carl Stevenson ever
used PSK-31 on the
amateur bands?

For the record, I have not
used PSK-31 myself on
the amateur bands.

So I will not lecture others
on how well it does or
does not work.

But I would like to read
of the experiences Brian
Floyd and Carl have had
with the mode, since they
obviously have strong feelings
about it.

>
> Oddly enough, growth started back up again when the incentive
> licensing changes were enacted. Huh?

Now you're trying to tell us that incentive licensing PROMOTED
growth in ham radio??? I don't think so ...

More likely the boom after WWII (and Korea) was due to military
radio folks becoming hams when they got out ...

The boom in the 60's was probably due to the emergence of economical
JA radios, a general increase in the interest in electronics, and later, the
emergence of VHF/UHF FM and repeaters ...

> How many HF amateur AMTOR contacts have you or anyone you know made in
> the past year?

I have AMTOR capability, but haven't hooked it up in the 3 years I've
been here in the new house ... used it a lot from the sailboat in the early
90's ...

> > > Of course what really drove all that was PC/soundcard setups becoming
> > > affordable.
> >
> > Agreed ... multimode with a std SSB radio and PC ... cool stuff.
>
> Sort of. But it's actually a patch job.

Actually, it's not a bad idea to use existing PC capabilities to do the
signal processing for multiple modes ... it's all software ... and within
the limits of a typical SSB radio, you can do some interesting, albeit
rather slow, stuff on HF.

> > However,
> > still limited in some respects and we can do better with purpose-made
> > RF modems capable of more speed and other improvements.
>
> "Purpose made RF modems"?? Why not call them data radios?

Whatever ... I tend to think that RF modems is a good term ...
after all, modem is the concatenation of MODulator and DEModulator.

> And I agree - a dig built specifically for data modes is the better
> solution. Deal with the decoding right at the IF level, rather than
> converting to audio and all that jazz.

Actually, most modern digital radios convert directly to I/Q baseband
and do the signal processing there ...

> But somebody's got to design and build the data radios. Who is going
> to tie the bell on that cat?

I was telling you of some plans I have for after I get my antenna work
done this summer ... winter projects, so to speak. However, you will
realize that I do work for a living and have other obligations as well,
so don't hold me to some firm, preconceived schedule. Don't get me
wrong, it's something I *really* want to do, and I intend to do it with
as much diligence as I can in terms of getting something accomplished.

> One reason packet is stuck at 1200 baud all these years is because
> going faster would require a purpose-built data radio. Ikensu isn't
> going to do it unless there's a proven market, and the failure of 9600
> to get much attention means they will wait some more.

9600 is a kludge in virtually all of the rice-boxes ... and it's not fast
enough to really be interesting or all that useful ...

> Was "incentive licensing" a mistake? It was very unpopular. Lots of
> folks were against it. Said it would kill amateur radio. I remember
> those times - they make this whole code-test thing look like afternoon
> tea.

I personally think that incentive licensing, as implemented, was a mistake.
It made little sense to require higher Morse speeds for privs that were
primarily non-Morse ... I have NO problem with a *reasonable* number
(I think 3 is adequate, 2 might be alright) of license classes in order to

encourage folks to learn more about radio technology ... I know that
many will say it's impractical from an enforcement standpoint, but I would
restrict power for the lower classes (though you've probably seen me
comment that brute force power is over-rated ... I doubt that I will ever
get a legal limit amp ... 100W seems to work just fine on HF), rather than
segregate newcomers from everyone else as widely as our current rules
do. Newcomers need to be welcomed and "socialized" (not like Larry's
"don't let the door hit you in the ass on the way out" shpiel ...) That's
how
to make more good ... and better ... hams - welcome them and show them
the way (politely).

> > I think that Fred knows quite well that the only CW-only subbands are at
> > 6m/2m.
>
> Sure. And I think he means dropping the CW/data subbands on HF, not
> those little pieces of 6 and 2.

I wasn't at the NCVEC meeting and am not privy to the discussion/intent
WRT this issue ... I won't presume to speak for Fred in any sort of
definitive, authoritative way ...

> > Besides, that is ONE petition of a number that have been/will be filed.
>
> Does NCVEC *ever* go against what Maia wants? Or are they his puppet?

It is my understanding that there are 13 or 14 VECs in the NCVECs ... ARRL's
rep was there. My understanding is that there was NO opposition to the
NCVEC
petition being filed as written.

> Since NCVEC is not a representative organization, and is only involved
> in testing, why are they getting into things like subbands?

They are considered by the FCC as an authoritative source. Why they said
each and every word they said is something upon which I won't speculate.

> > While I will not divulge the detailed contents of the draft NCI petition
> > that is under Board review right now, I *will* guarantee you that it
will NOT
> > propose any changes in band segmentation.
>
> And that's a good thing.

The primary objective is to eliminate Morse testing ... we don't want to
be distracted or delayed by other non-NCI-core issues that will take
more time for the FCC to decide ...

> > > >all that's being asked for is to eliminate the

> against, but since that policy is under review, the rep abstained. So
> the NCVEC reports the petition "approved without opposition".

Read Roberts' Rules ... I think a lone abstention does not count as
opposition ... to oppose, the party in question would have had to
proactively vote "no." An abstention amounts to "I don't care one
way or the other on this issue." (Or perhaps, "I'm not *allowed* to
vote one way or the other," when the voter is someone's employee.)

> subassemblies: drives and cards and premanufactured cables, power
> supplies etc. A knowledgeable person can "build" a functioning PC from
> a pile of "components" with just a screwdriver and good grounding
> technique.

Building a radio will involve components ... some may be "store-bought" ICs, others will be R/L/C, perhaps some discrete transistors, etc. ... BUT there is no reason that reasonably technically-inclined, intelligent hams cannot
"build" their own custom ICs at home these days ... there are all sorts of programmable logic devices, ranging from a few thousand or less gates to several millions of gates ... and the software to do design, simulation, verification,
and programming is either affordable, or in some cases free.

You do your conceptual design, code it in VHDL, simulate it, synthesize it into a file that is used to program the IC and voila, something that had NO "personalilty" ... no "idea of how to do anything" ... is now a functional "custom IC." This is REALLY cool stuff ... and there are lots and lots of free "cores"out there for all sorts of things ... SPI interfaces, microcontrollers,
FEC, and on and on and on ... all things that can be "hooked up" together and/or with your own code and synthesized into your own IC ...

The digital domain is moving closer and closer to the antennna ... folks who want to design and build need to start thinking in new paradigms ... like "I buy some off the shelf RF ICs, A/D and D/A converters and I hook them up with an FPGA that I've programmed, maybe a uController ... or an interface to a PC (maybe Ethernet) and I have a programmable radio that can be whatever I want it to be ...

Folks just need to think in new paradigms ... unfortunately, that does not seem
to be the strong suit of many present hams.

And what do you think "most people" do? Everyone I know does something
different. No two people do the same thing. A lot of people simply stay
home because they aren't interested in spending their money on bars and
parties.

> > It's ABOUT Amatuer Radio, Vipul...The event is organized FOR
> >Amateur Radio operators by Amateurs and OPERATING radios.
>
> Other than Field day, an event does not HAVE do be scheduled during Fri,
Sat
> night. Most people would do more recreational activities during that time.
>

This is a recreational activity for hams. Besides that, this is only a few weekends out of the year. There are 52 weekends per year. In the past 12 months, I've gone to 3 hamfests. This means that there were 49 other weekends for other recreational activities.

The non-ham who is being recruited needs to know what hams do. Therefore if they are "put off" by the hamfest, it's quite possible that ham radio is not the hobby for them just like it's not appropriate for you. We don't need more people with licenses who are not active.

> >> Most (non-Ham) Americans would expect the Hams would take a break from

> >thing the special even was organized to do...?!?!
>

Have you ever been to other major events in other hobbies? For example, people participate in various vehicle rallies where all they do for two days is cruise their vintage automobile up and down the designated streets. Other than stopping to eat, they don't take a break to do "other things."

> The event more than fulfilled what it was organized to do when they
operated

that
> you would understand that most people would be disappointed with that.

The majority of other hams would not be disappointed in that. Besides that most hams that I know are adults and if they decide to partake in other activities at the site they do so. On Field Day, my husband spent several hours at a nearby lake fishing as a break from hamming. He didn't need to make other people go with him. He did what he wanted when he wanted to.

I don't have to. What I saw was a change to the regulations, by the FCC having incorporated a rule from a different body of law that itself was changed, and that change flowed through. All one has to do is literally read the rule that the FCC wrote to note that a change has happened.

> The international requirement has not been eliminated, it has been changed.

I disagree. The SECTION that formerly defined an international requirement was changed. The new text defines NO requirement that is imposed on the countries that are party to the agreement. It indicates that each country is free to choose whether or not they want to have a NATIONALLY imposed requirement.

What you don't seem to understand is that by giving each country a choice to impose something on their licensees (and ONLY THEIR licensees), the section is no longer an "international requirement" by definition - because countries can opt out - and thus it's not required of them. Where countries CHOOSE to impose the restriction, it's not "international" (but national) in nature.

The international requirement HAS disappeared.

> It now says "Administrations SHALL determine ..."
>
> In ITU-ese, "shall" is mandatory.
>
> Therefore, the FCC is OBLIGATED to determine whether or not any
> class of amateur license requires a Morse test.

That is NOT an obligation on the licensees, but on the licensor. The requirement that 47 CFR 97.301(e) refers to is a licensee obligation (as well as on the licensor). Since the licensor in this case is the FCC, a U.S. Government agency, should they CHOOSE (i.e. it's not a requirement that they impose it) to impose a requirement, it's a NATIONAL requirement, not an international one.

> Since the FCC had ALREADY determined that a 5 wpm Morse
> test was required for HF access, it has already met that obligation.

Not relevant. Licensees aren't required to show compliance to anything other than the "international requirement" which was eliminated. What the FCC has determined is not the requirement stated for access per .301(e).

> Thus the existing FCC rules are "legal," nothing has changed,
> and NOBODY has lost ANY privileges.

I haven't said that any of their rules are illegal. I disagree that nothing has changed: The FCC might not have changed any of their rules, but the rule that one of their rules is dependent on HAS CHANGED, and that change flows through, whether good or bad, sensical or not, etc.... It doesn't matter that the FCC didn't change a thing; the rule still changed due to the external reference changing.

> The fact that the FCC is free to make a NEW determination and
> eliminate the Morse requirement from its own rules makes NO
> difference.

I fully agree with this last statement.

> I respectfully hope you get it this time ...

Get what?

Now, if every country were required to choose that they must have a morse code testing requirement of their licensees, that would be an "international requirement" because there really isn't any choice or discretion.

>

No, he has been much too busy bitching about a -ANY- code test.

>
>For the record, I have not
>used PSK-31 myself on
>the amateur bands.
>
>

As a matter of fact I HAVE, in fact rather extensively for the first
several months . I first got on PSK31 shortly after it was released and
the soundcard software was made available for download on the web.

As I note in my earlier post, to which the Village Idiot responded so inaccurately, it took about 30 minutes to learn how to use it once all the gear interfaces and computer preparation was made and I actually got it on the air. I learned a lot about it, too, not just some vaporous theory such as that Carl thinks he knows. It does work very well under most conditions, but it sure isn't foolproof by any means. Thus my report, well documented in Google I'm sure, on the incident that the Village Idiot Brian so sadly misunderstood. But that's the way things go for him, he has trouble chewing gum and walking in coordination, too.

>So I will not lecture others
>on how well it does or

Do you actually think that just using it means DICK can even begin
to understand how it works? The whole point of what has been said
was that DICK managed to use both PSK31 and CW, and yet is not
sufficiently aware of communications theory that his comparisons
of the two modes are easily demonstrated to be invalid.

His answer, which he has repeated several times now, was that
Shannon doesn't apply the anything about Amateur Radio.

At that point, what choice does one have but to write DICK off as
so ill informed that he should be totally ignored.

I'll say. I've noticed for awhile that there seems to be small
segment of the ham community who seem to think that vociferous
argument ought to be the major ham activity. They're loud, brash,
obnoxious and attract a lot of attention. By the looks of things,
they all seem to have descended on rra.misc and rra.policy. Now if we
could only figure out a way to keep them there, and off the air.

1972 Would make it the original Navaho (TRC-23, no bloody A, B, or C,
as Scotty might say). Kind of bulky for a Dodge Colt, but at least
somebody took advantage of the dual power supply in one of those. Most
of 'em got used as base station rigs...and 99% of the users were off
the air if the power went out because they didn't have the sense to
provide a backup DC supply for a rig that was tailor made for it.

This was back in the days when some people who worked at Radio Shack
actually knew something about their products.

When I went in to the store in NT and bought a handheld,
crystal-controlled scanner (circa 1975) the guy there had a whole
boxful of crystals and a list he had compiled himself of local
frequencies in case folks wanted to order 'em (at $5 each). Whereas
today they have to pull the data sheet up off the internet to tell you
if the scanner you're looking at even covers a given frequency. Today
they're more like Cellphone Shack. <sigh>

Radio Shack...you've got questions, we've got dumb looks.

>and actually
>got a lot of use out of it when travelling between the area R/S stores on

Actually, ham growth took a distinct drop virtually from the moment 'incentive licensing' (a.k.a. 'punishment licensing') was proposed in the early '60s. Seems a number of OTs (and NTs, probably) didn't like the idea that they were going to have privileges (including some of the most choice frequency segments) taken away from them and they'd have to pass a test (or two or three) to get them back. This coincided with a number of well-known manufacturers finding that it was no longer financially profitable to stay in the ham market. If there appears to be increased growth after 'incentive licensing', it'll likely just be that ham growth returned to its normal levels after recovering from the blow to morale inflicted by the implementation of incentive licensing.

It appears the ARRL and the FCC learned from this - I don't think there's been any proposals from either since then that envision taking away privileges from any particular class of license.

Sure it is, but it will take time. Before the end of the decade 7000-7200 will be worldwide exclusive amateur. That's double what Region 1 and Region 3 have now. It will make sense for those regions to move their 'phone up above 7100 and leave below 7100 to CW and digital.

>The ARRL bandplan is the only
>one out of step, so nobody else is likely to change theirs,

800 is pretty high. 600-700 is more common among CW ops. The SSB audio passband
is typically 300-2700 Hz, so 600 or even 800 is pretty low. 1500 would be smack
in the middle.

>This of course would be what you

>JA radios,
>

Uh, Carl, the JA radios didn't arrive until the early 70's, sorry.
Through the 60's the few transceivers available had Collins on them and
were outta sight for ordinary hams.
Herb Johnston started up Swan, building a few singlebanders in the
Arizona hamlet of Benson, east of Tucson sometime in that time frame,
and soon moves
the operation to the California coast. (I have a 20 meter model from the
Benson Az era)
Leo Meyerson of World Radio in Iowa produced the thrifty WRL Duobander,
a SSB-only hybrid transciever on 75/40 meters running tube finals,
worked quite well,. I had one in the car, and even
used it mobile CW some, too, though I had to rig it.. (I still have one
of those out in the shop, also)
The Tempo One/FT200 showed up in '72, I got one of the first that Henry
Radio received. A Lot of radio at a reasonable price. Hybrid with tube
driver and finals, as all the JA rigs were up till the Kewood TS120
series. Don't forget the Freebanders Wonder, the
ubiquitous FT101 series. There are still many thousands of those out
there, I'm sure.
Need a history lesson? Just ask!

And Oh, by the way, the surge in licenses didn't occur until AFTER the
adoption of Incentive Licensing, very late 60's-70's. That's as opposed
to the last round, which was definitely Disincentive Licensing.

The Navajo was an excellent "base station" rig at the time! However,
I believe it had been discontinued by the time I was working at the
Shack.

>This was back in the days when some people who worked at Radio Shack

>they're more like Cellphone Shack. <sigh>

I remember those crystal-controlled scanners very well, and yes, at all
the stores I worked at, we did have "home brewed" lists, and would
even keep the most popular crystals in stock! My store in Depew, NY
had a reputation as being a "CB/Scanner" specialist store, and I was
usually very busy doing ICST's (Inter-Company Stock Transfers) of
crystals to other Buffalo area stores!

>Radio Shack...you've got questions, we've got dumb looks.

The repair shop was in the basement of the Main St. store in downtown
Buffalo at the time. I remember it well!

I know that "SKYKING" used to be a call used by Air Force ground
stations as a general call to aircraft. As in "SKYKING, SKYKING,
This is McClellan, do not answer -- traffic follows" Am I warm?
I don't relate to "AFKAI-1." I personally got the "handle" Sky King
from the old TV program by the same name.

Ham Radio and SWL is old technology and BPL will benefit millions of consumers
that want broadband Internet access. It is not fair to stop new technology
because 100,000 people that are active ham radio operators want to hang on to
old 1844 technology called morse code.
If ham radio had millions of active HF operators then it could be argued that
their bands should be protected in some fashion. But 100,000 vs 130 Million
households shows that the smaller group should lose their HF privileges for
better technology. Ham radio has been replaced by the Internet.

The ARRL first proposed what became incentive licensing in 1963. It was *not* well received. The upturn after incentive licensing was implemented appears to be more of a 'well, they actually did it. Might as well get on with life.' reaction than a positive result of the change.

A couple of thoughts from this:

1. It appears likely that the overall attitude of *existing* hams may affect ham growth more than licensing changes. From what I see, ham growth stopped not because of licensing changes, but because a large segment of hams became disgruntled over what was merely a proposed change (What appears to be a decent description appears in http://www.qsl.net/ecara/wayback/page13.html and http://www.qsl.net/ecara/wayback/page14.html). What that tells me today is that the future of ham radio is probably going to be affected more by the attitudes of existing hams than it is by the exact nature of the entrance exams. If you want to see growth in the numbers and character of the amateur radio community, it will probably depend more on whether or not you and hams like you (whether NCTA or PCTA) will welcome, train, and encourage new hams and prospective new hams than on squabbling over entrance test requirements. Argue all you want over the code requirement, but if you really care about the future of the hobby, pay attention to your own attitudes to other hams and to prospective hams.

2. If the ham community could 'get on with life' after the squabbling over incentive licensing, we should be able to do the same after the code requirement squabbling. It appears there may be hope for the hobby after all.

Not while the US has CW in 7100-7150. As long as that's the case it makes
more sense _to_them_ to leave 7000-7100 unchanged and split the 'new'
7100-7200 50/50. Net gain to you - zero.

They have a bandplan. Phone stays above at least 7040, except 7030 in R3.
That's not the bandplan you want, but it's a bandplan. The reference to
good manners I don't follow. I don't expect the USA to follow anyone's
lead. Just don't be surprised when no-one follows the USA's lead either.

I use an IC-729 in my shack. Excellent receiver RF performance. Not very
good audio, though. Ironically it has nowhere to fit a narrow SSB filter,
but has a place for a CW filter (nothing in there, of course). Not the
Rolls Royce of radios, but I'm not overloaded with cash.

> from other services, (snip)

The pool of trained operators concept relates to our ability to do the
other things outlined in 97.1 (public service, international goodwill, and
so on). At one time, code was a necessary part of at least some of that.
That is much less so today, hence the move to change the code testing
requirement.

> (snip) And public service. (snip)

I'm not aware of the use of code by any of the typical served agencies
(Red Cross, MARS, and so on).

> (snip) Besides, everything hams do is either "for
> enjoyment" or public service. Does that mean none
> of it should be tested?

Huh? I thought I was fairly clear about all this. Code was once necessary
for the goals and purposes outlined in 97.1. At the very least, that is much
less so today (some would say it is not at all so today). That severely
weakens the justification for a unique license requirement. If the license
requirement is actually removed, code will then be tested on an equal
footing with the other operating modes (written theory). Nothing in that is
an argument for or against testing anything else.

How a number of CW ops intentionally jammed Miller then per 3.950
today. And they didn't do it running barefoot.

> I'm thinking of how he lied
> about where his DXpeditions were.

The jamming occurred based only on the *suspicion* that Miller was not
operating from where he said he was well before any of it landed in
the courts. The jamming was completely out of line no matter how you
look at it.

That is what RIT is for, but these refugees from the cb band
don't know how to use it. They would really be hacked if they
had to operate in the days when Novices were required to be
crystal controlled. You called CQ on your crystal frequency then
had to tune the band with your receiver to listen for another
Novice, who more than likely had a different crystal frequency,
giving you a call. Too many modern day jap appliance operators
are wimps when it comes to operating, they know how to turn on
the rig, read their fancy digital readout and that is the height
of their technical skills.

Yet Dick is free to lecture others, i.e., "any idiot can get psk going

That is the point.

What name calling? I refered to Dick as "Dick." :-)
The comment simply paraphrased/slightly modified something someone
else said (I think it may have been Floyd's original comment, but I don't
remember for sure ...)

Besides, this is not a discussion of a truly technical issue, so what does
my level of technical competence have to do with THIS discussion?

>>
>>Oddly enough, growth started back up again when the incentive
>>licensing changes were enacted. Huh?
>
>The ARRL first proposed what became incentive licensing in 1963.

No, that's not exactly correct.

Until 1951 there were three classes of license - A, B and C. B and C were
equivalent except that C was by mail.

All licenses required 13 wpm code (sending and receiving) and a ~50 question
written test on theory and regs, about equivalent to the General of later
times.

Class A required another 50 question written test on advanced theory items and
one year experience. Class A was not available by mail.

All classes could operate on any authorized amateur frequeuncy at full
authorized power - using CW or RTTY. A Class A license was required to operate
'phone on any ham band between 3 and 25 MHz.

Very simple system, with the popular HF 'phone bands as the incentive. They did
not call it incentive licnesing, but that's what it was. And iot dated back to
the early 1930s.

In 1951 FCC restructured and renamed. The new Novice, Technician and Extra
classes were added. Class C became Conditional, Class B became General and
Class A became Advanced.

Novice was a one-time short term beginner license. Technician was a VHF-UHF
only license. Advanced and Extra were full privilige licenses but Advanced
would be closed to new issues at the end of 1952.

Extra required 20 wpm code and a new ~100 question written test on advanced
theory, plus two years' experience. This effectively raised the requirements
for HF 'phone privileges by quite a bit.

Novice and Tech experience did not count towards Extra or Advanced.

Both systems were forms of "incentive licensing" .

In late 1952, FCC reversed itself and gave all operating privileges to all hams except Novices and Technicians.

>It
>was *not* well received.

In 1958 FCC started asking why there were so few Extras (fewer than 4,000). By 1963 FCC was saying they were going to restructure again.

ARRL proposed that they reopen the Advanced to new issues and simply go back to the pre-1953 system that required an Advanced or Extra for HF 'phone between 3 and 25 MHz. FCC gave that proposal an RM number, and then asked for other ideas. Which flooded in, and at least ten of them got RM numbers. From all those proposals emerged the idea of subbands-by-license-class and other things. No one proposal was the source of the system that resulted.

>The upturn after incentive licensing was
>implemented appears to be more of a 'well, they actually did it.
>Might as well get on with life.' reaction than a positive result of
>the change.
>
Perhaps. But the discussion took 5 years, and newcomers back then almost all started with Novices.

The main points are that incentive licnesing was not a new idea but rather a return to an old system in new dress. And it was not an ARRL idea, but an FCC one.

There were several factors that stalled growth in the '60s:

1) The conversion from AM to SSB took away the recruiting effect of SWLs finding ham radio on their SW receivers. (Most receivers used by casual SWLs then were terrible for SSB)

2) FCC drastically reduced "Conditional territory", the places where a Conditional license could be obtained. Before 1963, you had to live 75 miles from a quarterly exam point. There were a large number of Conditionals as a result. In 1963, the distance went to 175 miles and the number of quarterly exam points increased.

3) FCC imposed fees for licenses and license tests (except Novice). Adjusted for inflation, the fees were considerable - about $40-50 in today's money, pass or fail.

4) 27 MHz CB was becoming popular with people wanting local communications. No test at all, inexpensive equipment, small antennas. Some people dispensed with the license entirely.

5) '60s counterculture and the Vietnam war alienated many young people from "square" activities like ham radio. Young people were the primary source of new hams after 1951. (There weren't a lot of hams at Woodstock).

"You can not answer a
question with another
question" - Len Anderson

The question I asked was
whether YOU had ever used
PSK-31. I don't think you
have, Floyd Davidson.

You have theory but no
practical experience.
Dick Caroll has the opposite.

One would think your
combined knowledge
would synergize into

a greater whole. But
instead you both resist
the other's possible
contribution.

Is that the behavior you
want others to follow?

>The whole point of what has been said
>was that DICK managed to use both PSK31 and CW, and yet is >not
>sufficiently aware of communications theory that his comparisons
>of the two modes are easily demonstrated to be invalid.

Yet you have not done so.

>His answer, which he has repeated several times now, was that
>Shannon doesn't apply the anything about Amateur Radio.

That's obviously not true. Shannon's
work applies, just as Ohm's Law
applies.

Shannon's theories, however, are not
the only consideration. His work predicts
theoretical limits, or bounds, on the
performance of system models. Real
systems do not always reach the predicted
limits.

In other words, a practical system can
not exceed the Shannon bounds, but it
can fall short of them.

And not all models are accurate. For
example, if we consider only thermal noise,
PSK-31 appears to have an advantage. But
if the actual system includes random phase
shifts, PSK-31 may be unusable. These
shifts may be due to the transmitter, receiver
and/or propagation.

>At that point, what choice does one have but to write DICK off as
>so ill informed that he should be totally ignored.

You could consider his practical
experience, which you lack, as a
useful tool. Instead, you argue.
Very odd behavior.

The truth of the matter is that under some
conditions PSK-31 outperforms OOK
Morse CW, and under some conditions
OOK Morse CW outperforms PSK-31.

Can both of you
accept that fact?

True - but there was also widespread support for incentive licensing among
hams. Opinion ran almost exactly 50-50.

>This
>coincided with a number of well-known manufacturers finding that it
>was no longer financially profitable to stay in the ham market.

Who?

The 1960-68 period was marked by the introduction of many new SSB transceivers
and matched-pair receiver-transmitters, often at prices lower than comparable
AM equipment Besides the high priced Drake and Collins gear, there were
offerings from WRL/Galaxy (DB-84, Galaxy 3, 5, and others), National (NCX-3,
National 200, NCX-5, NCX-1000), Swan (monobanders, tribander, 350, 500)
Hallicrafters (SR-150, SR-160, SR-400, SR-2000, HT-46/SX-146), and SBE.
Heathkit had the SB series and the monobanders.

There was no shortage of good equipment.

>If

Perhaps. The '70s were a period of growth despite lots of hurdles.
>
>It appears the ARRL and the FCC learned from this - I don't think
>there's been any proposals from either since then that envision taking
>away privileges from any particular class of license.
>
ARRL learned, FCC didn't. In 1975, FCC proposed a complex 7 class "two ladder"
system that would have reduced the privilegs of many hams. ARRL and others
fought it successfully.

Yeah, "leaker" you sure are. You can't getit straight, either. Nothing will "end" han radio, at least not in any short time, just make it realtively useless.

The reviews at the time said it was comparable with anything regardless of
price bracket in _basic_ receiver performance, but that was back in '92. I
expect the world has moved on, and it never was loaded with features.

What do you use, anyway?

>>Not very

Depends what you mean - widen them or make them compulsory? There is no
expansion of CW use to justify the former, and most administrations don't
really care what hams do within the ham bands. I suspect that, for
example, Industry Canada don't even care about Canadian hams annoying
other Canadian hams by operating phone on CW frequencies.

>
>Now you're trying to tell us that incentive licensing PROMOTED
>growth in ham radio???

No, I'm simply pointing out the facts. There was lots of growth for about 17
years after WW2 (~8% per year!) then it stopped dead at the beginning of 1963.
Did not pick up again until about 1970, which was soon after IL was in place.

The numbers prove it. Do you have any conflicting data to present?

> I don't think so ...

Based on what? In the mid-'60s there were a few years when the numbers actually
declined.
>
>More likely the boom after WWII (and Korea) was due to military

>radio folks becoming hams when they got out ...

Immediately after WW2, yes. But after the restructuring of 1951, most newcomers were people too young to have been in either war.
>
>The boom in the 60's was probably due to the emergence of economical
>JA radios, a general increase in the interest in electronics, and later, the
>emergence of VHF/UHF FM and repeaters ...

You need to read up on the history, Carl. There was no boom in the '60s. You are thinking of the '70s, which is when the things you describe happened on a wide scale. The mid-1970s, in fact, when license requirements were the toughest.
>

Of course - but at the same time, really new modes and maximum performance are not explored unless they fit within the "SSB/PC" mindset.
>
>> > However,
>> > still limited in some respects and we can do better with purpose-made

So do most of us.

>so don't hold me to some firm, preconceived schedule.

I'm not. I'm simply pointing out the challenges of homebrewing in
our "technical service" called the ARS.

>Don't get me
>wrong, it's something I *really* want to do, and I intend to do it with
>as much diligence as I can in terms of getting something accomplished.

Of course. But like many other projects, it's on the classic "round tuit"
priority list.

>> One reason packet is stuck at 1200 baud all these years is because
>> going faster would require a purpose-built data radio. Ikensu isn't
>> going to do it unless there's a proven market, and the failure of 9600
>> to get much attention means they will wait some more.
>
>9600 is a kludge in virtually all of the rice-boxes ... and it's not fast
>enough to really be interesting or all that useful ...

Exactly. And to go a lot faster, you need a new radio, and we're back to
belling the cat again.

>> Was "incentive licensing" a mistake? It was very unpopular. Lots of
>> folks were against it. Said it would kill amateur radio. I remember
>> those times - they make this whole code-test thing look like afternoon
>> tea.
>
>I personally think that incentive licensing, as implemented, was a mistake.

So how would you have implented it?

>It made little sense to require higher Morse speeds

Speed. 20 wpm.

The ARRL's 1963 proposal was for no additional code testing at all. FCC, the expert agency, wanted 20 wpm for all privileges.

>for privs that were
>primarily non-Morse ...

That's simply not true.

The final plan, as enacted Nov 22, 1968, made the lower 25 kHz of 80, 40, 20 and 15 Extra-only territory. That's 100 kHz. The Extra-only 'phone territory of that time was 3800-3825 and 21250-21275. Only 50 kHz, on two bands (75 and 15). On 40 and 20, Advanceds had all 'phone privs.

The original announced plan was for the lower 50 kHz of the four bands to be Extra-only (total 200 kHz), but that was quietly dropped in 1969.

The biggest difference in 'phone privileges was between General and Advanced:

General: 3900-4000, 7250-7300, 14275-14350, 21350-21450 (total 325 kHz)

Advanced: 3825-4000, 7200-7300, 14200-14350, 21275-21450 (total 600 kHz)

IOW, upgrading from General to Advanced in those days got you 275 more kHz of 'phone (almost double) and no additional CW on HF. And all it took was a written test.

Upgrading from Advanced to Extra got you 100 kHz more CW and only 50 kHz more 'phone. Written and code test.

Thus, the argument that the Extra was "for privs that were primarily non-Morse ..."

is simply not valid.

It is left to the reader to compare the differences at various points since 1969.

btw, I passed Advanced in 1968 at the age of 14 and Extra in 1970 at the age of 16. So even those old tests were not impossible or even that difficult if one had a little knowledge and skill.

>I have NO problem with a *reasonable* number

Still doesn't answer the question. ARRL is, by far, the biggest VEC and they
abstained.

Sure. But it adds a big step to the project.

In the bad old days there were basically two steps: Mechanical construction,
then wiring. PCB construction reduced the wiring but added the step of PCB
fabrication and increased the toolkit needed. Adding programmability means yet
another step and an even bigger toolkit.

Hams need small, easy, quick projects to start with. That's why the simplicity
of CW is a real asset.
>

That's true on both sides of the code test debate.

Was that "Lucky 7" from out of Syracuse? I remember a local news report on my Milwaukee TV station about it. The operator would appear on the screen wearing a gas mask.

> More likely the boom after WWII (and Korea) was due to military
> radio folks becoming hams when they got out ...

There has never been a correlation made between the growth of ham radio and new batches of war vets. The far more likely reasons were the overall increase in the standard of living and more personal leisure time aided and abetted by a heightened awareness of radio comms and technology in general after those wars. And to a lesser extent the availability of surplus mil-spec hardware for cents per pound was a boon to growth. More younger people joined the hobby for all these reasons plus the availability of the then-new Novice license was a big shot in the arm for growth. "I wuz one" . . .

> The boom in the 60's was probably due to the emergence of economical
> JA radios,

That growth occurred when brands like (bloody expensive!) Drake, Collins, Hammarlund, Heath, B&W and the rest were the only games in town.

> a general increase in the interest in electronics, and later, the
> emergence of VHF/UHF FM and repeaters ...

HF equipment suppliers were and still are almost entirely driven by market needs and expectations and the competition to meet those needs and expectations per buck per performace capability. The availability of the HF riceboxes in the '70s did just that for the existing population of hams. I've never known of an example of anybody getting into ham radio simply because the newer HF equipment provided more bang for the buck.

Equipment availability for the bands above HF was never been much of a driver in growth until the Tech license was converted from being an experimenters ticket to a communicators ticket and even then there wasn't all that much growth. It wasn't until the 1980s that Techs got into packet in a big way and into the FM voice infrastructures because of the increasingly inexpensive VHF/UHF riceboxes that the they became major players in the growth equation. It was the Disincentive Licensing maneuver of '91 and the availabilty of $150 2M FM xcvrs which really done the deed. So now we have numbers. What else did we get out of that one?

> Actually, it's not a bad idea to use existing PC capabilities to do the

There ya go again dammit. It's gonna STAY that way too until YOU
figger out how to pull it off without screwing up the bands by being a
spectrum hog for your own jollies.

> 9600 is a kludge in virtually all of the rice-boxes ... and it's not fast
> enough to really be interesting or all that useful ...

9600 would have helped ten years ago but it never happened. In the
meanwhile packet and the Internet have been interlaced and the need
for 9600 has all but disappeared.

> > > I would respectfully disagree ... the idea that "hams can't work

> >
> > I agree!

Then YOU snip the frigging resistors and jumpers in this frigging SMT
radio so that I can get on 60M. Ya need a 10X magnifier just the SEE
the things on the frigging PCB!

And when it's all said and done the average ham won't learn or know
any more than he/she needs to pass the tests and/or to get on the air
and meet their specific operating objectives. Whatever takes the least
effort and brain pain prevails.

Fred is working on it . . .

> Folks just need to think in new paradigms ... unfortunately, that does not
> seem
> to be the strong suit of many present hams.

I heard exactly that same lament in the 1950s and it was just as true
then as it now. What conclusions do you draw from that as it relates
to the health, welfare and growth of ham radio?

I think most reasonable people can accept that.

OK Frostproof Floyd, there you go again, or maybe I should say "still". Just can't get it together when it comes to ham radio, can you? You prove it yet one more time.

If you think I have insufficient undestanding of Shannon's infornmation theory that's because you're terribly uninformed yourself. What my little recited experience showed, when the PSK was not copyable but the CW ID was, is merely to further confirm what I said- Shannon and his little mathematical circus really *DON'T* have anything to do with ham

radio. Of course, the lone exception would have to be to allow idiots like you and a few others to put together trash posts on usenet, but that's a separate issue.

What the "PSK-NO, CW-YES" incident showed was that Shannon DOES NOT apply **when the channel is not set by his rules**, which WAS exactly the case, as is virtually always the case in ham radio. When one works PSK31, the data portion is filtered to a much tighter specification than the amateur HF receiver as a whole, being done in the DSP function of the computer. The "channel" is not set by that narrow filter, only the PSK channel.
When the CW ID comes throuth, and the PSK does not,
it confirms that **in amateur radio applications**, where the communicatons channel in use is not constrained by Shannon's rules, they cannot be applied with any accuracy. Thus they don't apply. They * CAN'T* apply.

"The Channel" is whatever the ham radio operator, and his gear, set it to be. So when I work PSK31 and it can't print, but the CW- ID comes through loud and clear, to quote Cecil Moore, "The playing field is not level, the comparison is unfair". That was the best he could do, to insist that I also push the CW signal through the 30 cycle wide filter so that IT couldn't be copied just like the PSK couldn't be. Nonsense!

When (if ever) ham radio gear is manufactured so that the Shannon limit is built into the equipment, and *that* sets the channel limit, obviously my statement will no longer be true, as I certainly trust - hope?- you can see. But I see you're not anywhere nearly as sharp as Cecil, and that certainly comes as no surprise

So you passed a ham radio test in 1960, then promptly forgot about it all. Now you show up on usenet to portray yourself as some sort of Guru Expert Professional. Why don't you just crawl back across the tundra to your rabbit hole- The game's over
You're nothing but a Lennie who once held a license.

It is nice to see that you do understand just how basic DICK's
error is.

[I snipped your rant about different kinds of noise, because
it had no point, wasn't necessarily correct, wandered in the
wilderness, and means nothing in this context. If you'd like
to discuss "noise" and/or "distortion" in a bandwidth limited
channel, start a different thread.]

>>At that point, what choice does one have but to write DICK off as
>>so ill informed that he should be totally ignored.
>
>You could consider his practical
>experience, which you lack, as a
>useful tool. Instead, you argue.
>Very odd behavior.

Using PSK-31 is not exactly a great indication of experience.
DICK's experience with *only* CW, PSK-31 and other common modes
used on Amateur bands is an extreme restriction. And that is
exactly why he (and Larry Roll) should *not* be using themselves
as a yard stick for other hams.

The whole point is that this business of DICK and Larry claiming
that what they can do, is what everyone else _must_ do, is
ridiculous on its face because there are many others we could
use as a standard that would put the two of them out the door as
well.

DICK and Larry have dabbled at 2, 3, maybe 4 different kinds of
digital communications systems. Thrilling. Whether I or
someone else has used or not used *any* of those, is not really
significant... if I or someone else has in fact used *dozens*
of other digital systems, including many of the more recent
ones. There is _nothing_ special about PSK-31, other than it
is just about the upper limit of DICK's lack of experience.

In fact *your* argument is the same bogus one that DICK and
Larry make! Because *they* use CW (or PSK-31), everyone else
either does, or is declared too dumb to license (or understand
how Shannon applies to PSK-31). That is invalid logic and leads
you to erroneous conclusions.

>The truth of the matter is that under some
>conditions PSK-31 outperforms OOK
>Morse CW, and under some conditions
>OOK Morse CW outperforms PSK-31.

And that tells us *nothing* about which is the more efficient or
effective mode of communications.

>Can both of you
>accept that fact?

DICK is the *only* one who has suggested otherwise. Everyone
else has told him his reasons for such claims are bogus. So
what is *your* point?

Speaking of proofs, you've generated a real beauty here:

> If you think I have insufficient undestanding of Shannon's
>infornmation theory that's because you're terribly uninformed
>yourself. What my little recited experience showed, when the
>PSK was not copyable but the CW ID was, is merely to further
>confirm what I said- Shannon and his little mathematical circus
>really *DON'T* have anything to do with ham radio. ...

Now Claude Shannon's work is a "little mathematical circus"!
And you've added *EMPHASIS* to the statement that it has nothing
to do with ham radio.

DICK, you've made my point for me and there is very little else
to say.

> What the "PSK-NO, CW-YES" incident showed was that Shannon
>DOES NOT apply **when the channel is not set by his rules**,
>which WAS exactly the case, as is virtually always the case in
>ham radio.

Well, there is one other thing to say. But I've stolen this
from Cecil once or twice already, so I'll quote him directly
this time:

"Again, power level is only one of three inter-related
parameters. If they are not all equal, then the playing field
is not level. Your being able to copy the CW ID, which has an
equivalent 12dB power advantage, is like saying a 150w SSB
signal is easier to copy than a 1w CW signal. It's true but it
is also meaningless.

Thanks to DICK CARROLL'S LOGIC, SSB can be proven to be
superior to CW every time. That follows from ignoring any of
the throughput parameters."

Cecil, W6RCA

Another way of looking at it, is that Shannon's "rules" do
apply, and that is virtually *always* the case in ham radio.

Keith,

As soon as you can figure out what BPL is going to do to hi-fidelity stereo am broadcast (you were aware of that, right? This is new technology), you be sure and let the group know. Also, if there is a big solar flare and satellites are temporarily effected, I hope you aren't aboard a sinking ship that depends upon HF (not amateur radio) as a backup. You are aware the ships do use hf, right? I didn't say Morse code, I said HF. Amateur radio only occupies a small portion of HF. I know that the average cber thinks that no one uses HF, but 130 million households should have priority over a sinking ship? Ignorance is curable, stupid isn't. Which are you suffering from?

817. Re: Antisocial Hams- The Reason People Turn Away

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-09 21:56:47 UTC
From: Phil <nomail@noway.com>
Message-ID: <3vpajv8t0754490jf0e7gt00gm02on0qh3@4ax.com>
Source record: 74381

On a related note to this discussion, I have just started operating on the 40 and 20 meter bands using a 50-plus-year-old SSB receiver and transmitter. Both units have been tuned up to factory specs. Frequently, I am told by those that I try to engage in QSO that I'm opeating 'off frequency', and that I should "get my rig fixed". Several folks have refused to continue the QSO for that reason. When I did get one kind soul to retune his receiver to match my transmission, I was off by 80 Hz (!). I'm not sure that this old beast could ever tune more accurately than that!

There are a surprising number of hams out there that have lost the spirit of the hobby (one idiot told me that he won't bother to QSO with someone who is off by even 10 Hz....it bothers his ears!) - experimentation and homebrewing have apparently been replaced with buying the latest microprocessor-controlled 1 KW-plus rig and top-of-the-line beam antenna, turning the tuning knob to a frequency, pointing the antenna at the target area and yakking away. (It takes me at least 45 seconds to get this old transmitter on frequency, tune the driver, plate and load controls, adjust the antenna tuner, set the level, switch from dummy load to antenna and go!). "Gee, buddy, you're coming in 20 over S9 here, beautiful signal!"....no @#$%, with $4000+ worth of commercial equipment or more, not much challenge in that. Realistically, this takes not much more than the level of skill required to hook up stereo equipment, or wire up a store-bought PC! Try contacting someone DX with an old boatanchor and a homemade wire antenna sometime - now THAT is an accomplishment!

Guess this hobby has become more of a giant telephone than an experimenters' playground - wish it weren't so! Guess that I'm only anout 40 years too late....

Plenty warm, see below.

>I don't relate to "AFKAI-1." I personally got the "handle" Sky King
>from the old TV program by the same name.

AFKAI-1 is a USAF document listing tactical callsigns assigned to
various purposes. Parts of the document are classified so don't expect
to find a copy on the net.

As for SKYKING, it is believed (by long-time HF utility station
monitors) to refer to assets under STRATCOM. The current form of a
"foxtrot" goes something like, "SKYKING, SKYKING, do not answer,
sierra, oscar, lima, authentication bravo sierra, I say again,
SKYKING, SKYKING, do not answer, sierra, oscar, lima, authentication
bravo sierra, time 2027, Andrews out." Three letter message, two
letter authentication, with the timestamp of the transmission
following the second reading of the message.

Well, there ya go, hopping across the tundra again, Frosty.
Since you so conveniently snipped all the information from my post,
I'll just insert it again here, for information of the
readers....wouldn't want anyone
to miss anything....

If you think I have insufficient undestanding of Shannon's infornmation theory that's because you're terribly uninformed yourself. What my little recited experience showed, when the PSK was not copyable but the CW ID was, is merely to further confirm what I said- Shannon and his little mathematical circus really *DON'T* have anything to do with ham radio. Of course, the lone exception would have to be to allow idiots like you and a few others to put together trash posts on usenet, but that's a separate issue.

What the "PSK-NO, CW-YES" incident showed was that Shannon DOES NOT apply **when the channel is not set by his rules**, which WAS exactly the case, as is virtually always the case in ham radio. When one works PSK31, the data portion is filtered to a much tighter specification than the amateur HF receiver as a whole, being done in the DSP function of the computer. The "channel" is not set by that narrow filter, only the PSK channel.
When the CW ID comes throuth, and the PSK does not,
it confirms that **in amateur radio applications**, where the communicatons channel in use is not constrained by Shannon's rules, they cannot be applied with any accuracy. Thus they don't apply. They * CAN'T* apply.

"The Channel" is whatever the ham radio operator, and his gear, set it to be. So when I work PSK31 and it can't print, but the CW- ID comes through loud and clear, to quote Cecil Moore, "The playing field is not level, the comparison is unfair". That was the best he could do, to insist that I also push the CW signal through the 30 cycle wide filter so that IT couldn't be copied just like the PSK couldn't be. Nonsense!

When (if ever) ham radio gear is manufactured so that the Shannon limit is built into the equipment, and *that* sets the channel limit, obviously my statement will no longer be true, as I certainly trust - hope?- you can see. But I see you're not anywhere nearly as sharp as Cecil, and that certainly comes as no surprise

So you passed a ham radio test in 1960, then promptly forgot about it all. Now you show up on usenet to portray yourself as some sort of Guru Expert Professional. Why don't you just crawl back across the tundra to your rabbit hole- The game's over
You're nothing but a Lennie who once held a license.

BTW, can you tell us why Shannon's little "circus" doesn't
relate to the Viterbi coding used by PSK-31 or the QPSK
modulation, and how that doesn't relate to effective
communications (compared, for example to CW)? I don't believe
you, and I'd sure like to hear more about it...

> What the "PSK-NO, CW-YES" incident showed was that Shannon DOES NOT apply **when the
>channel is not set by his rules**, which WAS exactly the case, as is virtually always the

It appears you don't actually know much about PSK-31 do you?
Did you ever actually get it to work at all?

> When the CW ID comes throuth, and the PSK does not,
>it confirms that **in amateur radio applications**, where the communicatons channel in use
>is not constrained by Shannon's rules, they cannot be applied with any accuracy. Thus they

Wrong. *Any* communications channel in use is constrained by
Shannon's rules.

> "The Channel" is whatever the ham radio operator, and his gear, set it to be. So when I
>work PSK31 and it can't print, but the CW- ID comes through loud and clear, to quote Cecil
>Moore, "The playing field is not level, the comparison is unfair". That was the best he
>could do, to insist that I also push the CW signal through the 30 cycle wide filter so
>that IT couldn't be copied just like the PSK couldn't be. Nonsense!

What 30 cycle filter are you talking about? There is none.

The problem is you are comparing two different data rates
through the same channel. PSK-31 runs at 31.5 bits per second.
If you used CW at that rate, it works out to about 37.8 wpm.
Are you telling me *you* can copy 35 wpm using a 200 Hz filter
when there is Doppler distortion from auroral activity?

In fact, what you've done is demonstrate that Shannon's work
does apply to ham radio! PSK-31 is an m-ary channel using
QPSK (where m = 4), which trades signal to noise ratio for
bandwidth to obtain the same data rate as it would using
straight phase modulation.

What *you* should be saying is that your experience demonstrates
that Shannon's theories prove true in the practical application
of ham radio. When the SNR is low, CW can be useful, albeit at
very low data rates, if restricted bandwidth is a requirement.
Of course, if the bandwidth wasn't restricted to 200 Hz, almost
any variation on PSK modulation would out run CW for efficiency,
as can easily be demonstrated using Shannon's formula.

> When (if ever) ham radio gear is manufactured so that the Shannon limit is built into
>the equipment, and *that* sets the channel limit, obviously my statement will no longer be

Well, danged. I believe that "the Shannon limit is built into"
every piece of communciations equipment I've ever seen. Tell me
about the gear you use where it isn't! I'd like to know about
this infinite bandwidth you have, and the lack of noise. Must
be interesting.

>true, as I certainly trust - hope?- you can see. But I see you're not anywhere nearly as
>sharp as Cecil, and that certainly comes as no surprise

Cecil is indeed a sharp fellow, and I don't think I'm insulted
if I don't measure up to him.

But maybe that bit about you being too dumb to be a real ham is
true, eh?

> So you passed a ham radio test in 1960, then promptly forgot about it all. Now you show
>up on usenet to portray yourself as some sort of Guru Expert Professional. Why don't you
>just crawl back across the tundra to your rabbit hole- The game's over

Looks like 'JJ' has it right. He hit it right on the head. What Phil needs to do is take the boatanchors to the AM group. THey at least know how to tune a fella in. 3880/3885, 7190/95, 7160. 14280 or so. 28.1 and up.

Enjoy.

They why we can increase the SNR and get more channel capacity
regardless of the bandwidth? Sounds like bandwidth isn't so
central after all, eh?

Hmmm... maybe, just maybe, that was what Cecil was getting at,
by leaving all else the same and just providing more signal to
increase the channel capacity despite whatever the bandwidth
was?

See DICK, just having attempted to use PSK-31 hasn't made you into
much of a yard stick to measure hams by. Using CW didn't seem to
help you much either... so I can't see you as a shining example of
any need to have a CW test prerequisite to having a ham ticket.

Or a 100% homebrew rig. I have a few of those.

>Guess this hobby has become more of a giant telephone than an
>experimenters' playground - wish it weren't so! Guess that I'm only
>anout 40 years too late....

Tune that rig down to the low end of the band and work some CW. You will not get that sort of response from the CW folks. We run all sorts of stuff, from the latest multikilobuck top of the line to ancient pre-WW2 glowbugs to homebrew to QRP. As long as your signal and fist are decent, nobody cares much about exact QRG or such nonsense.

Try 7035 - lotta good CW ops around there.

Dwight, that statement in 97.1 is an OLD thing going back decades.

It was put in there to rationalize the existance of amateur radio among all the other very commercial radio services.

Three to four decades ago there MIGHT have been a "need" for "trained operators" for the military draft. [the USA still had a draft and the Cold War was very warm indeed] Never mind that the military already HAD ways of training in the "radio arts."

Does national defense or the various aid agencies NEED amateurs who are "trained" in DX contesting and sitting around telling old war stories about when Kode Vas King? I don't think so.

>> (snip) And public service. (snip)
>
> I'm not aware of the use of code by any of the typical served agencies
>(Red Cross, MARS, and so on).

Morse code use will keep out the eveavsdropers and bad people from the content of communications, thus not letting them know the deep dark, very secret ways of the ham. Secure.

So I've been told.

>> (snip) Besides, everything hams do is either "for

Now, now. Rev. Jimmie LIVED THOSE TIMES. He KNOWS.

:-)

I'm sorry that W9ERU hadn't retired, moved out west and become
K7DI, then, eventually, did the SK. Gene Hubbell and his partner
in H&H Electronics did great business selling boxes after boxes
of surplus ARC-5 units and BC-348s back in 1947. Back then,

"surplus" was a Big Thing and many hams restarted or got started
on converted surplus radios. World War 2 was over in 1945 and
the Korean War hadn't started yet (1950).

>The boom in the 60's was probably due to the emergence of economical
>JA radios, a general increase in the interest in electronics, and later, the
>emergence of VHF/UHF FM and repeaters ...

It's difficult for even old-timers to understand a postwar boom period and
the Cold War getting hotter when they've just reached First Grade. :-)

You ARE right, but some of these holier-than-thou old-timers lived in
a different reality.

>> "Purpose made RF modems"?? Why not call them data radios?
>
>Whatever ... I tend to think that RF modems is a good term ...
>after all, modem is the concatenation of MODulator and DEModulator.

The rest of the radio-electronics industry calls them "RF Modems" but
you have to remember you are talking to a holier-than-thou old-timer
who may think that amateur radio operates by different physics than
all other radio. <shrug>

>> And I agree - a dig built specifically for data modes is the better
>> solution. Deal with the decoding right at the IF level, rather than
>> converting to audio and all that jazz.
>
>Actually, most modern digital radios convert directly to I/Q baseband
>and do the signal processing there ...

Carl, I don't think that QST or QEX have described "I/Q baseband"
radio systems. Such doesn't exist in AMATEUR radio so it doesn't
help to argue the points. Never mind that one in two Americans now
have cell phones and they are all little radios using that system. :-)

>> But somebody's got to design and build the data radios. Who is going
>> to tie the bell on that cat?
>
>I was telling you of some plans I have for after I get my antenna work

>so don't hold me to some firm, preconceived schedule. Don't get me
>wrong, it's something I *really* want to do, and I intend to do it with
>as much diligence as I can in terms of getting something accomplished.

The holier-than-thou old-timers insist on the "no-coders" to do all
the technical advancements in amateur radio. Never mind that they
weren't able to do much in a half century. :-)

>I personally think that incentive licensing, as implemented, was a mistake.
>It made little sense to require higher Morse speeds for privs that were
>primarily non-Morse ... I have NO problem with a *reasonable* number

>(I think 3 is adequate, 2 might be alright) of license classes in order to

>"don't let the door hit you in the ass on the way out" shpiel ...) That's
>how to make more good ... and better ... hams - welcome them and show them
>the way (politely).

The holier-than-thou old-timers won't hear of "being nice" to newcomers.

They have achieved TITLE, STATUS, Rank and Privelege and can sign
their callsign behind their names (just like nobility). They are Very
Important exhalted People who are "superior!"

Nobility suffers the peasantry, poor things.

>> Since NCVEC is not a representative organization, and is only involved
>> in testing, why are they getting into things like subbands?
>
>They are considered by the FCC as an authoritative source. Why they said
>each and every word they said is something upon which I won't speculate.

Hmphhh...if NCVEC is "NOT" an authoritative source, why in the hell
are they given full power to make up ALL the written exam questions
and answers?!?

>> That's not what I'm talking about at all. My point is not about SMT,

>
>Building a radio will involve components ... some may be "store-bought"
>ICs, others will be R/L/C, perhaps some discrete transistors, etc. ... BUT
>there is no reason that reasonably technically-inclined, intelligent hams
>cannot "build" their own custom ICs at home these days ... there are all sorts
of
>programmable logic devices, ranging from a few thousand or less gates to
>several millions of gates ... and the software to do design, simulation,
>verification, and programming is either affordable, or in some cases free.

What is already being done NOW is using things like a PIC micro-
controller (a microprocessor plus some extra I/O interface) from
Microchip, Inc. They supply a full Assembler software program FREE

for download. Major distributors (Digi-Key, Allied, Mouser, etc.) stock PIC microcontrollers. They've been used in all sorts of radio-related projects which can be seen on the Web.

That sort of thing is anathema to the holier-than-thou old-timer who insists on EVERYTHING being the SAME as when he was young.
They bitch and whine about "digital" as if it were a dirty word and they don't and won't LEARN new things. Why should they? They already have Title, Rank, Status in amateurism and "real radios glow in the dark" like back in the 1950s.

>Folks just need to think in new paradigms ... unfortunately, that does not
>seem to be the strong suit of many present hams.

Think "The Emperor's New Clothes." Yes, it doesn't "suit" them at all.

When their morsemanship skills are worn out and they take off that outer clothing, they aren't wearing anything of knowledge underneath.

I think some in the Archaic Radiotelegraphy Service are still making coils on round Quaker Oats cartons and finding the "sweet spot" on their galena crystals so they can hear DX from the next county...

>> that the new changes would bring. Which also did not come to pass.
>
>I would submit that the change from spark to CW was a big, progressive
>change.

Not in Jimmie's day of around 1923 or 1924. He lived it all. In fantasy.

>Likewise the change from AM to SSB.

...which would not have happened if AT&T hadn't used it on wireline
"carrier" equipment...or a number of commercial communications
carriers hadn't used it on HF in the 1930s...or USAF's SAC had
contracted Collins and RCA for military single-channel SSB
transceivers.

>From plain RTTY to things like AMTOR, PACTOR, PSK31, etc.

If one extra can't understand a 1947 landmark paper on communications
theory, why do you expect a bunch of amateurs will understand the
relationship between noise, bandwidth, and error rate? :-)

>Did these changes come about overnight? No. Did OTs bitch
>and whine? Yes.

"B&W." Like sour old root beer. :-) :-) :-)

Sorry to slight A&W which makes very good root beer...

>> None of these were forced on hams by regulatory change. Hams adopted
>> them voluntarily. For example, spark wasn't outlawed for hams until
>> 1927, even though it was essentially abandoned by hams by 1923 or 24.
>

>restrict the USE of Morse ... all that's being asked for is to eliminate the
>test requirement that even the FCC and the IARU admit are not in the
>best interest of the future of ham radio.

All them holier-than-thou old-timers are too good to be true...as long
as you agree with their old, outmoded ways of radio. :-)

>Nobody is being forced to do anything ... in fact, the proposed/anticipated
>change will STOP forcing folks to do something that many don't want to
>do ...

IARU saw the light. ARRL refused to look, so far. That kind of
spells out how it will go in the USA on test element 1.

ARRL won't let go of the code test until the last morse recording is
removed from their director's cold, dead fingers.

>So, the "None of these were forced on hams by regulatory change." argument
>doesn't hold water Jim.

You were speaking at a holier-than-thou old-timer in ham radio, Carl.

:-)

>> AM is still popular on HF - in fact, more popular than 20-30 years
>> ago. What caused hams to abandon AM in large numbers was the simple
>> fact that an SSB transceiver was less expensive than an AM

>bit yet. It might be fun, but isn't doing anyone a bit of good.

AWWWW....POOR POOR LITTLE HOCKEYPUCK!

FEEL BEAT UP DO YOU?

TSK, TSK.

> Gloat time is over.

NOT BY A LONG SHOT, HOCKEYPUCK.

PRO-CODERS HAVE HAD A HALF CENTURY PLUS OF GLOATING
AND BROW-BEATING THOSE THAT DIDN'T CARE TO USE MORSE
OR DIDN'T SEE THE NEED TO USE IT.

HALF CENTURY.

>Your time has come.

Nope. YOURS has. You aligned yourself with the pro-coders on the
barricades. You WILL lose. Try, try to get used to the reality.

>You now have the chance to prove that you were right.

That was "proven" a long time ago by every OTHER radio service.

The old Beepers wanted to preserve their youth long, long after
and kept up the pressure for all AMATEURS to test for code.

The IARU finally saw the light of reality for the International
Amateur Radio community. ARRL may never see it. ARRL
seems a law unto itself with all its brainwashing over the years.

>And browbeating the losers isn't a very good start.

POOR BABY!

My, the HOLIER-THAN-THOU attitude sounds so "noble!"

You ain't no "loser," hockeypuck. You just picked the wrong
side and try to disguise your whining with that holier-than-thou
hypocritical BS about some imaginary "ethics."

If you are going to restart all that tinnitus whining, you're out of luck. I have it too and I'm not whining or making excuses.

A half century ago I and hundreds in my outfit were busy doing primary HF communications trans-Pacific. NO morse code used for that then, none after, not even after HF communications went from primary to secondary status in 1978.

> Sorry to hijack the thread, Jim!

Back under the bridge, troll...

It hasn't been YOU showing any "respect" Larrah. Sure, you've tossed
in some "polite" small phrases now and then, but then followed that up
with LOTS of "off-putting" disrespectful sentences and phrases all about
your own self-promotion as "expert in communications.".

>>However, as has been pointed out, you insist that your superior CW skill
>>is ALL that counts and that since I'm not up to your standards in that area
>>I'm a "lesser ham."
>
>It's a simple fact that you don't have operating experience and proficiency
>in Morse/CW, which I consider to be one of the most useful communications
>skills in the radio amateur's arsenal.

Hmmm...let's see...

Larrah claims employment at Radio Shack prior to his 20 years with USAF.
In the USAF he flew a desk and never did any USAF communications.
Then he claims attending college with "summa cum laude" title add-on and
thus able to get any Human Resources career position he wants after
graduation...instead of landing a job as a Personnel specialist, he winds up
a BUS DRIVER but insist on calling his occupation "paratransit specialist."

Yes, a whole heaping glob of "communication skills" in that short resume.

For marketing folks and snake-oil salesmen.

A mere 50 1/2 years ago I was doing trans-Pacific HF transmissions as
part of my military service. At no time during my 3 years in that was there
ANY morse code used for primary communications. The USN radio HF

primary and USAF HF primary communications used the same TTY and
voice and FAX modes at that time. By 1978 HF comm was relegated to
secondary status, all US military branches.

For a half century the military and commercial carriers on HF have NOT
used any manual morse telegraphy for primary communications. But
the soma come loud bus driver insists that "morse code is a primary
skill!"

Ah, but the bus driver insists that is needed in amateurism! Of course,
to keep alive a living museum of the Archaic Radiotelegraphy Service!

To keep that legend alive, he insists that ALL who desire to enter a
radio hobby activity MUST take a manual telegraphy test!

Larrah's only justification is his holier-than-everyone opinion and self-
elevation to Raddio Godd status.

>I have always acknowledged your
>superior, professional-grade technical skills, and those of all other hams of
>all license classes who possess them. However, I must reiterate, this is the
>AMATEUR Radio Service. The ARS has a long-standing tradition of
>requiring proficiency in the use of the Morse code, for the purpose of
>permitting radio amateurs to exploit the many benefits and advantages of
>that particular mode.

Invalid on all accounts, Larrah. Your accounts are bankrupt.

The FCC is NOT chartered to preserve old legends and old traditions.

ARRL seems to think its duty is to keep the morse legends and myths
alive and doesn't shrink from that propaganda anymore now than they
did a half century ago. They refuse to modernize even though the IARU
sided with eliminating the code test in ITU-R S25.5.

The ONLY place where morse code skills are of "value" would be in
amateur radio. Even snake-oil salesmen who were morsemen couldn't
make a living communicating in morse these days.

But, you, the NON-communicator (except as a very amateur) want to
keep a federal law that forces all newcomers to test for morsemanship!

Incredible!

>I have consistently stated that I feel that this skill is
>important enough to radio AMATEURS that it simply cannot be replaced,
>even with technical skills which exceed licensing requirements.

Not a problem for you Larrah. You know so little about radio-electronics
theory that morsemanship is ALL you have in radiocommunications.

>This is my opinion, Carl -- not a demonstration of any lack of due respect.
>I would expect a person of your intelligence to recognize and acknowledge
>the difference.

Hmmph...I would have expected someone with Summa Cum Laude
status and new BA degree in "human resources" (PERSONNEL) to
"get any job he wanted" in said "human resources." You are now
driving a bus.

Don't worry Larrah...nearly all of us have the "intelligence to recognize
and acknowledge" snake-oil salesmen when they show up in here.

>Moreover, I have never held myself out as anything more
>than an "average" ham, with the notable exception of occasional hyperbole
>used in this newsgroup (and nowhere else) to push the buttons of particularly
>intransigent fellow participants, including your own good self.

HYPOCRITE!

Google has thousands and thousands of your own words archived where
YOU hold YOURSELF up as the "role model" of "expert" in anything you
are talking about, showing your "dedication and hard work" to become
an extra class morseman. As an AMATEUR.

Self-elevation. Self-promotion. That is all you do in here.

Now go shine up your big bus, "graduate (summa etc.) human resources
specialist," your passengers are waiting...

Outside of never giving in to any valid arguments against his "superior"
viewpoint and "knowledge," extra DICK may be suffering from
beeperitis.

Beeperitis is not a medical term and isn't recognized by medical folks,
but it exists. It is the result of self-fantasizing during long periods of
morse coding that enables them to enter another dimension, a
dimension of monotonic sound, a twilight zone of the imagination that
makes them think they are "experts" at radio communication.

A side effect of beeperitis is that all the concentration on beeping robs the mind's neurons of accepting modern theory. Note: Claude Elwood Shannon's famous landmark paper was first published in 1947, a mere 56 years ago...it was available from the University of Illinois' website archives page as a download (where I got my first copy for my archives). Shannon's 1947 paper uses teleprinters as an example, comparing bits per second versus bandwidth versus noise versus error rate...all at rates far in excess of human morse code cognition. The old-timer morsemen would turn away from such things. A few, like extra DICK, would refuse to consider such universally-accepted laws as valid in amateur radio. Beeperitis syndrome side effect in full flower.

>Of course, Extra DICK is still here telling us that he is a measure
>of what makes for a good ham operator, and that anyone who's any
>dumber than him shouldn't be allowed on the bands.
>
>Hmmm... maybe when we look at it from that perspective, he may have

>Well, I'm sure Carl expects that his professional RF engineering
>qualifications
>should grant him exalted status in the ARS, but in truth, it just ain't so!

That is NO "expectation," just the whining of someone who was never in the professional ranks of radio being envious of those who have.

Like it or not, amateur radio is still a technological activity. If it weren't
you would be little more than a "CBer" with a license. BFD.

>I know
>lots of radio amateurs, of all license classes, who haven't made dime number
>one as a professional electronics technician or engineer, who are infinitely
>better hams than I am or Carl could ever be.

Then we can all guess that your vaunted Radio Shack days were all done voluntarily? :-)

Define "better" hams.

>What they all have in common is
>the fact that they have, throughout their "careers" as radio amateurs, been
>willing to explore and adopt new modes, while retaining the skills learned
>with the old ones, particularly Morse/CW.

A "career" is what professionals do...it is their WORK.

Unless there has been a sudden change in Part 97, Title 47 CFR, US amateur radio is NOT for pecuniary compensation. [that's why it is called "amateur"]

Let's see...you've only mentioned the old-timers you know...who are, not surprisingly, all very much pro-morse-code. Would that make you "biased" as judging all of the US ARS? Not according to you (we can all see the spin coming). According to everyone else except the pro-code syncophants, the bias is VERY apparent.

Negative points for your appraisal, Larrah...

>Their stations are truly up-to-date,
>they have usually attained high places on the DXCC standings, routinely
>hold leadership positions within their clubs, and can be counted on to
>provide valuable input and personal support for all club activities.

Ahem..."truly up-to-date" is cribbing right from the old pre-WW2
Amateur's Code. You should be able to do better, with all your
Summa Cum Laude college studies for a Human Resources degree.

Well, you (and your "ilk" whatever those are) subscribe to the old
description of "amateur radio is all about working DX on HF with CW."
That's the high point of your "career in ham radio?" :-)

"Leadership in a club" is a rather title-hungry description, isn't it?
That would be fine if the "club" is all about DX contesting. However,
some pro-coders insist that US amateur radio is all about a "diverse"
interest range that includes other things than DXing. Which is it?

"Valuable input and personal support" is more self-gratification
phrasing, "standard boilerplate" phrasing it is called in the writing trade.
If a club is all about DXing, then I'm sure the old-timers' "valuable input
and personal support" will be for THEIR favorite activity which is DXing.
That's just self-definition stuff, Larrah, NOT something that covers the
wide range of activities possible in US amateur radio.

>They are the ones
>who newcomers look to for the answers, while the so-called "professional"
>hams simply cluster amongst themselves and look down their noses at the
>proceedings of the rest of the club.

Now, now, Larrah, there you go again showing your envy of radio and
electronics folks who have REAL careers in radio-electronics.

You are ALL about self-promotion and self-glorification.

You know so little of basic electronic theory that you don't dare get into
any discussion at all technical in nature about radio in here...you would
be shown to be the self-glorifying flim-flam salesman you probably are
and then YOU look down your nose at those who are knowledgeable!

Feel free to go out and get a REAL job in radio that needs your morse
code skill and expertise and report back, okay? Make a CAREER in
code! Bum a ride on your company's bus if you need to...

Len Anderson
retired (from regular hours) electronic engineer person

So now you present a moving target. Just like dear old Cec.

OF COURSE things change with any of the conditions change.
But that really isn't pertinant to a ham radio operator making a
contact on the air. He isn't going to go "QRX while I do a Shannon
caculation to make sure we're able to make this contact." There was
virtually nothing I could do that I hadn't already done to alter-improve
any of the CHANNEL conditions that early morning. But hey, you haven't
actually been on the air in decades, so it's not too unusual that you
wouldn't be able to relate to any of that.

See, PRICK FLOYD, I did far more that "attempt". Unlike you, The
Village Idiot Burke and Kandid Karl, I actually DID use it, rather
extensively for some time, in fact until it got boring. So it's
experience speaking not just obscure theory.

I've never heard of anyone in any other radio service "doing a
pause to make a 'Shannon calculation'!" :-) :-) :-)

>There was

Remarkable how you "know" what everyone has done, is doing, or will
be doing.

Maybe you don't have Beeperitis after all, just some kind of Alzheimer's?

Now, now, extra Dick, don't get all foul-mouthed. :-)

Your given name is NOT Richard and you are NOT an extra?
Oh, my, then you've deceived us all along!

You "used Shannon's Law rather extensively?!?" How?

Well, the basic formula is rather a small one. Devised in 1947.
56 years ago. At Bell Labs. The same place that had the inventors
of the transistor. Same year. :-)

No problem, Man from Misery. Most of us don't give a damn what you
post. :-)

Good pot-shooting requires practice. You provide an excellent target
for that. Big pot. Small contents.

Have a nice half weekendf, Extra Dick.

:-)

Regardless of how long it was put there, it's still there today,
ergo just as binding as it was then.

> It was put in there to rationalize the existance of amateur radio among
> all the other very commercial radio services.

Every radio service MUST be justified (not rationalized) to
exist. The electromagnetic spectrum IS finnite and therefore a
valuable resource that must be conserved and used wisely.

> Three to four decades ago there MIGHT have been a "need" for "trained
> operators" for the military draft. [the USA still had a draft and the Cold
> War was very warm indeed] Never mind that the military already HAD
> ways of training in the "radio arts."

The need for a "pool of trained operators" continues to exist to
this day. Events as recent as TODAY prove that.

> Does national defense or the various aid agencies NEED amateurs who
> are "trained" in DX contesting and sitting around telling old war stories
> about when Kode Vas King? I don't think so.

You "don't think so" because you're an idiot and a troll.

"National defense" is more than Morse operators. Hundreds of
thousands of dollars are being poured into Emergency Services training
for Amateurs specifically because they ARE licensed operators...seems
someone is sufficiently satisfied with the idea of our abilities to
warrant the spending of scarce funding.

> >> (snip) And public service. (snip)

> <shrug>

Morse code is not necessary to meet the criteria laid out in
97.1, and was only incidental to it. Amateur Radio (as a community)
meets all points of 97.1 with ot without it, in any number of modes.

And that's a fact YOU can't seem to live WITH, Your Scumminess!

A quote from the ARRL website:

QUOTE

Red Cross honors ARRL for Amateur Radio's tornado work (Aug 8, 2003)
-- The ARRL has received a certificate of appreciation from the
American Red Cross for the "valuable service" League members provided
in support of Red Cross efforts after a devastating series of tornados
struck Missouri, Kansas, Tennessee and Arkansas on May 4. The
certificate specifically acknowledges Amateur Radio operation in
Missouri. "Your time and compassion resulted in more than 735
individuals and families being sustained in a time of crisis," wrote
ARC National Coordinator of Disaster Volunteers Wendy Kaplan in an
accompanying letter also signed by ARC executive vice president for
disaster services Terry Sicilia. Amateur Radio and the American Red
Cross have a long history of cooperation during disasters. The first
Memorandum of Understanding between ARRL and the ARC dates back to
1940.

UNQUOTE

It would seem that the American Red Cross, an entity that's been
in existence far longer than Lennie the Lame, sees Amateur Radio's
contributions to disaster relief and Public Service in a significantly
different light than he does.

Seems to me that this pretty well meets the criteria set out in
97.1.

Whew!

You might want to compare it to more modern stuff. The Ten Tec and Elecraft
websites have various receiver performance measures of different rigs, as
actually measured.
>
>What do you use, anyway?
>
My homebrew 100 watt transceiver and an Elecraft K2 built from a kit.

Yep. Brace yourself.

>It won't be possible for us OFs to keep up with it if
>it's even close to a repeat of the technology explosion of '92-'93.

Which was dwarfed by the followup in '95 when the vanity call rules changed. And the total inundation by technorevolutionaries after the 2000 restructuring.

It was almost sad, seeing all that nearly-new ham gear made obsolete overnight by the waves of radical technical improvements the technically-knowledgeable newbies brought. Remember how Yaesu, Kenwood and Icom nearly dominated the ham market until those folks revived homebrewing to the point that "appliance operating" is just a niche interest?

>We're doomed to obsolescence. Sob.

Yeah - HRO practically giving away those IC-7800s, TenTec offering the Orion as a kit and being snubbed because there wasn't enough DSP in it. And all those surplus SINGCARS set mods cluttering up QST....

Brian,

I did make a minor mistake. BPL is cut off at 1.8 MHz, thus avoiding the deep pocket broadcasters. I'm still not sure how well the cheap Chinese radios will work with BPL being fed right into the power lines.

Then there are HF aeronautical frequencies. I forgot there are HF radio astronomy listening posts. I wonder how well folks will hear WWV at any HF frequency. SWLs will love BPL; forget hearing a lot of foreign broadcasters. This thing is looking very ugly, indeed. BTW, don't blame the Democrats; it is usually the big-money backed Republicans that will sell their own mother to make money for someone who lined their pockets. I noticed that in Japan, they blame the liberal Democrats for running huge deficits and keeping interest rates at near zero. Sounds like what our Republicans are doing, doesn't it? Frankly, I don't trust Republicans or Democrats; both have to serve special interest groups before the common good.

Source record: 74230

A couple of other questions for you Keith.
BPL uses frequencies between 1.8 and 80 MHz.

Question #1: Does 27 MHz CB fall between 1.8 and 80 MHz?

Question #2: Do HF radio astronomy posts use frequencies between 1.8 and 80 MHz?

Question #3: Does WWV use frequencies between 1.8 and 80 MHz?

Question #4: Do HF aeronautical frequencies lie between 1.8 and 80 MHz?

Question #5: Do HF foreign broadcasters use frequencies between 1.8 and 80 MHz?

Question #6: Will SWLs be impacted by the answer to question #5?

Question #7: I see you provide a link to short wave. Just what do you think short wave is? (BIG hint: HF; 3 to 30 MHz, just what is being impacted).

Question #8: I see you provide a link to scanners. You are aware that many scanners go down to 30 MHz or so (some lower) and even VHF frequencies to 80 MHz are affected.

Question #9: What are the frequencies occupied by the lowest channels of television in the United States? (Hint, channel two runs between 54 MHz and 60 MHz). Do these frequencies lie between 1.8 and 80 MHz?

Now think about those questions for a while.

These are just simple starter questions; it gets worse the deeper you dig. Now go back to your room and shut the padded door :)

In article <87u18qpong.fld@barrow.com>, Floyd Davidson <floyd@barrow.com>
writes:

>Using PSK-31 is not exactly a great indication of experience.
>DICK's experience with *only* CW, PSK-31 and other common modes
>used on Amateur bands is an extreme restriction. And that is
>exactly why he (and Larry Roll) should *not* be using themselves
>as a yard stick for other hams.

Frostbite Floyd:

This newsgroup is about AMATEUR Radio. The experience that Dick and I
have with CW, PSK-31, and other modes "common" to AMATEUR Radio
is certainly not a "restriction," and is, indeed, a "yard stick" by which we
can
analyze other hams on the basis of their technical and operational activities.
The more you take this discussion out of the context of AMATEUR radio,
the more irrelevant you make yourself. If you have professional-grade
technical qualifications, I think that's great. However, I don't -- and very
few AMATEUR radio operators do. What we do have is curiosity, and a
willingness to learn. We also have the operating authority to experiment with
modes such as PSK-31 and adapt them to effective communications in keeping
with the rules, regulations, and purpose of the AMATEUR Radio Service.

>The whole point is that this business of DICK and Larry claiming
>that what they can do, is what everyone else _must_ do, is
>ridiculous on its face because there are many others we could
>use as a standard that would put the two of them out the door as
>well.

I won't presume to speak for Dick, but I consider myself to be a typical,
average AMATEUR radio operator who has pursued the art and science
of AMATEUR radio communications at a level which is considerably
above that of other hams who, for whatever reasons (excuses), fail to
pursue modes beyond those involving voice communications. Now, to
be fair, I don't include among that group those who tend to specialize in
more technical aspects of the hobby such as building and maintaining
repeater systems. I've known a lot of hams who do this, but are No-Code
Techs who don't have any interest in CW, or anything else on HF, for
that matter. I value their contribution and consider them to be full-fledged
radio amateurs. However, they represent a very tiny minority of the
overall ham radio population, and an even smaller minority of No-Code
Techs. They are even further diluted when you consider the fact that a
lot of the technical/repeater gurus are also CW-tested, CW-using, CW-
loving, and Morse code test supporting Pre-Restructuring Extra class
licensees.

>DICK and Larry have dabbled at 2, 3, maybe 4 different kinds of
>digital communications systems. Thrilling. Whether I or

Yup. "Dabbled" is just about what I'd call it myself. However, my
"dabbling" represents a level of technical involvement which I would
dare say places me in the top 5th percentile of just Extra-class hams,
not including all other license classes. Therefore, I consider myself
to be more than qualified to judge other hams on this basis.

>someone else has used or not used *any* of those, is not really
>significant... if I or someone else has in fact used *dozens*
>of other digital systems, including many of the more recent
>ones. There is _nothing_ special about PSK-31, other than it
>is just about the upper limit of DICK's lack of experience.

However low Dick's "upper level" of experience is compared to your
professional technical experience is irrelevant. This is a discussion of
the AMATEUR radio service, and the experiences of AMATEUR
radio operators is the only valid basis for the comparison of the relative
level of technical involvement among radio amateurs. Legitimate
"pros" like Len, Carl, and yourself do add considerable value to the
ARS as a whole, but you cannot in any sense of fairness use yourselves
as any kind of objective "yardstick" by which other hams are measured.

>In fact *your* argument is the same bogus one that DICK and
>Larry make! Because *they* use CW (or PSK-31), everyone else
>either does, or is declared too dumb to license (or understand
>how Shannon applies to PSK-31). That is invalid logic and leads
>you to erroneous conclusions.

Fallacy. You are making apples-to-oranges comparisons, which is a
well known Usenet tactic, but one which always ultimately ends up
disqualifying the person using it.

>>The truth of the matter is that under some
>>conditions PSK-31 outperforms OOK
>>Morse CW, and under some conditions
>>OOK Morse CW outperforms PSK-31.
>
>And that tells us *nothing* about which is the more efficient or
>effective mode of communications.

No, it doesn't. That would depend on a universally accepted
definition of the terms "efficient" and "effective" in the context
of the use of these modes within the ARS. To the extent that the
meaning of these terms are infinitely arguable, only those of us
with fairly extensive operating experience in each can even come
close to being qualified to render an objective opinion.

>>Can both of you
>>accept that fact?

I cannot accept something which isn't true.

>DICK is the *only* one who has suggested otherwise. Everyone
>else has told him his reasons for such claims are bogus. So
>what is *your* point?

Dick's claims are not "bogus" in any way, since they are based on
his practical operating experience as a radio AMATEUR using
modes authorized in the AMATEUR radio service. The only thing
"bogus" around here is your futile attempt to discredit him.

BTW, I do believe that Mr. Shannon's theory is relevant to Amateur
Radio. I believe that what Dick is doing is making observations
based on actual operating experience, rather than empirical theory.
This may be the cause of the confusion, but as I said earlier, I do
not presume to speak for Dick.

I have a feeling that if and when BPL is implemented on a large scale, PSK-31 is going to be rendered useless for hams that have BPL service in their area.

>and under some conditions
>OOK Morse CW outperforms PSK-31.

On many occasions, the only part of a PSK-31 transmission I could "copy" was the Morse code CW ID at the end of the transmission! And these instances were under what I'd call "normal" operating conditions. The one thing that has kind of disappointed me about PSK-31 is that it really isn't all that robust when faced with even moderately trashy band conditions. In fact, a lot of times when I had to give up on PSK-31, I went over to plain 'ole RTTY and was able to keep going. PSK-31 is great, and I like it a lot, but I'm glad I have CW and RTTY/AMTOR/PACTOR as a backup.

Carl:

You referred to Dick as "dumb." Any reasonably objective observer in
this NG would not arrive at that conclusion. Hence, you were engaged
in name calling, regardless of whether it was a quoted source or not.

>Besides, this is not a discussion of a truly technical issue, so what does
>my level of technical competence have to do with THIS discussion?
>
>Carl - wk3c

A good question, Carl. I've always wondered exactly what your alleged
technical competence has to do with ANY discussion in this NG! After
all, this is about AMATEUR radio! While I freely admit that I do have a
great deal of respect for hams who do possess genuine, professional-
grade technical qualifications, you, and your apologists Floyd Davidson
and Len Anderson, tend to raise the noise level to BPL standards!

Never work, Scott. The first individual who actually tries to fix the sordid mess will find he/she has no backing from the party and will be voted out the next time by big buck 30 second videos extolling the virtues of the opponent. I remember that happening to Charlie Goodell of New York back in the late 60s or early 70s. My guess is to *never* re-elect anyone. That avoids forming too close of ties with the money folks.

Just my two cents' worth

What about HF aeronautical communications? HF ship communications? Radio astronomy frequencies? How will OATS (open air test sites) be able to operate, or should we ship that to China as well? Of course, if you are close by, you still can communicate. Better check your calibration. Tune WWV. Oops, I forgot, WWV is buried unless you live within 20 miles of the site. Maybe the shortwave listeners should complain.

Just a thought or two.

>
>Frostbite Floyd:
>
>This newsgroup is about AMATEUR Radio.

Amateur radio POLICY, soma come loud bus driver.

RADIO is a technical activity involving communications.

Electrons, fields and waves don't work any differently in one radio service versus another just because a human regulating agency separated them in some regulations. You still don't understand that concept.

>The experience that Dick and I
>have with CW, PSK-31, and other modes "common" to AMATEUR Radio
>is certainly not a "restriction," and is, indeed, a "yard stick" by which we can
>analyze other hams on the basis of their technical and operational activities.

Larrah, you CONSTANTLY use YOURSELF as the "yardstick" by which others are "measured"...whether it's in ham radio or occupation or anything.

Ho hum. Your constant ego-boo is very tired-putting of readers.

>The more you take this discussion out of the context of AMATEUR radio,
>the more irrelevant you make yourself.

Is someone actually MAKING MONEY posting in this newsgroup?!?

All posts in here are DEFINITELY "amateur" in that regard...the opposite of professional writing.

The only thing irrelevant in here is your insistence that US amateur radio is full of technical dummies (like yourself).

Not very nice of you.

>If you have professional-grade
>technical qualifications, I think that's great. However, I don't -- and very
>few AMATEUR radio operators do.

See? Your own "yardstick" in action.

You've just implied that YOUR "expertise" is the SAME as two-thirds of
a million US ARS licensees...all of them technical dummies who can't
do anything but plug-and-play-ham-radio.

A great and glorious gratuitous INSULT to thousands of US ARS licensees
who ARE ALSO professionals in radio.

Feel proud of yourself. You are an archtypical ham Dumb who can't get
dumber.

>What we do have is curiosity, and a willingness to learn.

Tsk, tsk, there you go again, shaking your little "we-we" thing.

>We also have the operating authority to experiment with
>modes such as PSK-31 and adapt them to effective communications in keeping
>with the rules, regulations, and purpose of the AMATEUR Radio Service.

Of course...Amateur radio is all about working DX on HF with CW.

Not to mention collecting colorful postcards, fancy certificates, and
rising above all others in radio on self-inflated ego balloons filled with
hot air.

>>The whole point is that this business of DICK and Larry claiming
>>that what they can do, is what everyone else _must_ do, is
>>ridiculous on its face because there are many others we could
>>use as a standard that would put the two of them out the door as
>>well.
>
>I won't presume to speak for Dick, but I consider myself to be a typical,
>average AMATEUR radio operator who has pursued the art and science
>of AMATEUR radio communications at a level which is considerably
>above that of other hams who, for whatever reasons (excuses), fail to
>pursue modes beyond those involving voice communications.

Oh, my, you so good and great margarine don't melt in yo' mout.

>Now, to
>be fair, I don't include among that group those who tend to specialize in
>more technical aspects of the hobby such as building and maintaining
>repeater systems. I've known a lot of hams who do this, but are No-Code
>Techs who don't have any interest in CW, or anything else on HF, for
>that matter. I value their contribution and consider them to be full-fledged
>radio amateurs.

Thank you, Your Holiness.

Sigh...another sermon on the antenna mount.

>However, they represent a very tiny minority of the
>overall ham radio population, and an even smaller minority of No-Code
>Techs. They are even further diluted when you consider the fact that a
>lot of the technical/repeater gurus are also CW-tested, CW-using, CW-
>loving, and Morse code test supporting Pre-Restructuring Extra class
>licensees.

Sigh...morsemanship is the epitome of the Archaic Radiotelegraphy
Service.

In your imaginary reality. One that Rod Serling never touched...

>>DICK and Larry have dabbled at 2, 3, maybe 4 different kinds of
>>digital communications systems. Thrilling. Whether I or
>
>Yup. "Dabbled" is just about what I'd call it myself. However, my
>"dabbling" represents a level of technical involvement which I would
>dare say places me in the top 5th percentile of just Extra-class hams,
>not including all other license classes.

QEX ought to devote a whole two-month issue just to YOU...

>Therefore, I consider myself
>to be more than qualified to judge other hams on this basis.

You just consider yourself "more qualified" than ANYONE.

>However low Dick's "upper level" of experience is compared to your
>professional technical experience is irrelevant. This is a discussion of
>the AMATEUR radio service, and the experiences of AMATEUR
>radio operators is the only valid basis for the comparison of the relative
>level of technical involvement among radio amateurs.

Tsk, tsk, there you go again...making US ham radio nothing but
Dummies like YOURSELF.

>Legitimate
>"pros" like Len, Carl, and yourself do add considerable value to the
>ARS as a whole, but you cannot in any sense of fairness use yourselves
>as any kind of objective "yardstick" by which other hams are measured.

You've got "yardstick" engraved with your own name in gold.

This isn't a "yardstick" for egos, gas man.

Those who KNOW radio technology can MAKE radios and APPLY
them in communications.

Amateur Dummies can only buy them, plug them in, and play with
them.

>>In fact *your* argument is the same bogus one that DICK and
>>Larry make! Because *they* use CW (or PSK-31), everyone else
>>either does, or is declared too dumb to license (or understand
>>how Shannon applies to PSK-31). That is invalid logic and leads
>>you to erroneous conclusions.

>
>Fallacy. You are making apples-to-oranges comparisons, which is a
>well known Usenet tactic, but one which always ultimately ends up
>disqualifying the person using it.

Geez...you've NEVER been qualified in anything except being a
newsgroupie, Larrah.

>>And that tells us *nothing* about which is the more efficient or
>>effective mode of communications.
>
>No, it doesn't. That would depend on a universally accepted
>definition of the terms "efficient" and "effective" in the context
>of the use of these modes within the ARS. To the extent that the
>meaning of these terms are infinitely arguable, only those of us
>with fairly extensive operating experience in each can even come
>close to being qualified to render an objective opinion.

1. You aren't objective, you are SUBJECTIVE.
2. All you can claim is "operating" and even then no one gets on
a "sked" with you.
3. All you claim is nothing more than plug-and-play with ready-
made toys.
4. All you've learned as a soma come loud personnel student is a
bunch of gobbledegook nonsense phrases.

>I cannot accept something which isn't true.

Translated: You won't acknowledge anything that doesn't prove your
intrinsic glory and greatness.

>>DICK is the *only* one who has suggested otherwise. Everyone
>>else has told him his reasons for such claims are bogus. So
>>what is *your* point?
>
>Dick's claims are not "bogus" in any way, since they are based on
>his practical operating experience as a radio AMATEUR using
>modes authorized in the AMATEUR radio service. The only thing
>"bogus" around here is your futile attempt to discredit him.

Extra DICK discredits himself technically very handily.

>
>BTW, I do believe that Mr. Shannon's theory is relevant to Amateur
>Radio. I believe that what Dick is doing is making observations
>based on actual operating experience, rather than empirical theory.
>This may be the cause of the confusion, but as I said earlier, I do
>not presume to speak for Dick.

"Empirical theory?!?"

Did you learn that as a soma come loud college student?!?

No wonder no personnel department ever offered you a job.

>A good question, Carl. I've always wondered exactly what your alleged
>technical competence has to do with ANY discussion in this NG! After
>all, this is about AMATEUR radio!

Larrah, it's just too bad that US amateur radio doesn't have a book, "Radio for Dummies" that you could read to find out what radio, ANY radio IS...you NEED one.

"Radio" is a general activity involving technology in and about radio communication.

Radios do NOT work "differently" because some regulating agency states one radio activity is "amateur" and another radio activity is "commercial/professional." Electrons, fields and waves work the SAME in ANY radio regardless of human legislation.

You can't understand that. I wonder why?

Maybe its because you can't distinguish one active from another...like all your bragging about "summa cum laude human resources graduate" and then you get a BUS DRIVER job.

>While I freely admit that I do have a
>great deal of respect for hams who do possess genuine, professional-
>grade technical qualifications, you, and your apologists Floyd Davidson
>and Len Anderson, tend to raise the noise level to BPL standards!

Poor baby...still miffed at no one recognizing your intrinsic Greatness?

Technically, you know NOTHING about "BPL" except a lot of hysteric emotionally-fueled gabbling and paranoia and ten kinds of NIMBY shouts and hollerings.

Come back when you've learned a smidgen of technical knowledge and can talk sensibly with some evidence of knowing a small bit about the technology. [I doubt that will ever happen...]

PROFESSIONALS made all your little radios possible as a product so that you could buy them, play with them, and then sit around POSING as an "amateur guru-expert-knowitall."

Don't bite the hands of those who made all your toys.

Source record: 74268

I would like to state for the public record that the L.A. Times article ("Race for Governor) has a misquote from me. They stated that I designed the landing radar for the Apollo. My comment was clear that I was part of the TEAM that did the design. Somehow that TEAM word was left out. To my colleagues that were on that team, I offer my apologies. I was a dim bulb amongst the stars of the project.

Nor do I chastise the Times. They had to get 158 biographies by telephone in a very few hours. That they got as much right as they did is a minor miracle.

>the past year?

Yet SITOR - the commercial version of AMTOR - is the standard HF
mode of data communication in the maritime service. That, and not
obscenenly-expensive satellite comms, is what killed maritime CW.
The ship's purser or deck officers can pull up the preset HF
transceiver channel and pound away, and even personal e-mail is now
sent and received by a SITOR connection to AOL via Globe Wireless,
the successor to RCA and ITT, via an AOL "kiosk" in the recreation
areas. No Radio Officer needed.

One of the San Francisco area marine radio techs, a ham, applied to
the FCC to be able to offer PACTOR service in the marine bands, and
after consulation with the ITU, his request was turned down because
it was not an international standard and would not give that much
improvement over SITOR considering the changes necessary.

And the US Coast Guard and other similar agencies world-wide
continue to transmit NAVTEX bulletins (marine broadcasts) on 518 kHz
worldwide using SITOR.

>> > Of course what really drove all that was PC/soundcard setups becoming
>> > affordable.
>>
>> Agreed ... multimode with a std SSB radio and PC ... cool stuff.

Yeah - I can tune SITOR by setting the (suppressed) carrier 2.2 kHz
higher than the channel center and using LSB. Cheapie "FSK".

Going to be "more easier" later on this week when my new Ten-Tec
computer-tuned DSP HF receiver arrives, and I can set the filtering
to just where I want it.

I'm not throwing my AMTOR/SITOR TNCs away just yet.

>Sort of. But it's actually a patch job.

>One reason packet is stuck at 1200 baud all these years is because

Hey, we know that we can get at least 28K or more in a standard
audio channel. But hams are cheap - nobody (including me) wants
to throw away existing 1200 baud radios and TNCs that work really
well for the type of canned messages that we get on packet, unless
they are super-whizzes at Qualcom, with due appolgies to Phil Karn
who fits that description and has done a LOT for digital ham radio
specifically and whom I admire greatly.

Larry, no will note that Brian refuses to substantiate his lies by
finding and posting any such statement by me. The reason for this is
obvious- he's an ignorant liar and no such statement was ever made. It
probably does take most of 4 hours to initially get everything
interfaced, work out the setup details, get the souindcard in the mood
to work as intended, etc other hardware issued resolved, and
get up and running on PSK 31. But that isn't considering that learning
to use it only takes only a short time for anyone who has ever done
anything like that, and using the internet isn't all that diffeent.

Poor Brain(less) Village Idiot Brian can't find anything better to chew
on so let him have at it.

But gee Kim, if someone has "made it" as a VE, shouldn't they be proficient in the mode(s) they are testing on? Seems to me that if someone is going to qualify as a VE, they should be at an extreme proficiency level......

If a VE or VE team cannot effectively send a method of communication like morse code as a required testing mode, it makes me wonder of the value of the mode in the first place. If they are relagated to only using CD's or tapes, I guess that would show the "dumbing down" of amateur radio, bringing it "one step further to extinction."

Seems to me it should not be a problem for the whole VE groups to have a set "pre-scripted" QSO's. There could be as many as needed, 10, 20, 30 or more pre-made QSO's to send.

It's not just a matter of national defense, Len. The pool of trained operators concept also applies to civil defense, public service, and so on. As such, the concept is just as valid today.

> (snip) Does national defense or the various aid
> agencies NEED amateurs who are "trained" in DX

Since I haven't seen too many of that type, I wouldn't know. However, I do know than many hams contribute their time, skills, and equipment, to help out where needed. That help isn't always exactly perfect, but it is available and free (which can't be said for much else in this world).

Lennie:

I understand it just fine, thank you. However, my "understanding" will never measure up to your standards, so I will just have to live with that. Too bad you can't!

> Maybe its because you can't distinguish one active from another...like
> all your bragging about "summa cum laude human resources graduate"
> and then you get a BUS DRIVER job.

Well, find me an entry-level Personnel Officer job in Kent County, DE with the same pay and benefits as my present job, and I'll take it! BTW, I applied for one in my own company last year, but it went to, of all people, one of my own classmates, a very fine, sexy-looking YL! She did NOT graduate with any kind of honors, since she took her program part-time and took over 7 years to get her degree, whereas I did mine on a full-time basis in 2.5 years. But I don't look as good in a cubicle as she does!

>>While I freely admit that I do have a

> Poor baby...still miffed at no one recognizing your intrinsic Greatness?

I hadn't noticed that anyone isn't recognizing it, Lennie. But then again, you seem to have been the only one who noticed, so thanks for that!

> Technically, you know NOTHING about "BPL" except a lot of hysteric
> emotionally-fueled gabbling and paranoia and ten kinds of NIMBY
> shouts and hollerings.

Hey, it sounds like it could be a very useful thing indeed -- much more so than a lot of former CB'ers squaking on the HF phone bands! The problem is, hams aren't the only HF users that would be affected!

> Come back when you've learned a smidgen of technical knowledge and
> can talk sensibly with some evidence of knowing a small bit about the
> technology. [I doubt that will ever happen...]

I am a BUS DRIVER, remember? My knowledge of communications is limited to what I've done in AMATEUR radio, and the use of my 800 MHz voice/data comm system in my bus. You're the pro, not me! And I've never claimed to be one!

> PROFESSIONALS made all your little radios possible as a product so
> that you could buy them, play with them, and then sit around POSING
> as an "amateur guru-expert-knowitall."

Lennie, you're obviously in need of new reading glasses. I've never claimed to be anything but an average ham with average, AMATEUR-level technical skills.

> Don't bite the hands of those who made all your toys.

Never. They may not have been washed after the last time they used the rest room!

True, but the paradigm has changed. When CW was the ONLY, or
even the DOMINANT mode of communication via radio, the need for
a pool of (CW) trained operators was legitimate.

That is no longer the case. Trained ops, yes, but trained in what is
actually USED in modern day emergency communications, which is
overwhelmingly voice (VHF/UHF and HF SSB, and data modes).

Is the Anderson home communications center experiencing difficulties
again. This one wasn't any more worthy than its earlier twin, Leonard.

Cecil was spreading bullshit, just as you are.Shannon simply will not reveal which mode is useful and which is not under the conditions which ham radio operators work. When PSK31 won't function within it's own 30 hz channel, but the CWID *WILL* work within the 2.4 khz channel in use for both, it makes the solution very simple- CW is the mode of choice! To insist that the PSK is the "more efficient" when it is useless is far beyond stupid. It is more efficient only in it's own individual environment. Ham radio operators - that is, those who actually get on the air and learn how to USE all these modes, know how to sort it out, and did long before Shannon ever came along.

Now, *thats the way things work in the real world* where hams actually get on the air and use radiocommunications. I know, you and The Putz have no real world experience in such things, so you have nothing else to fall back on.You can do whatever theorizing you wish off the air.

As for Carl Stevenson, well he's still stuck on 20 meter Single Sideband Voice.
I guess he's awaiting the arrival of all the Freebanders and their new no-code "Extra Class" licenses to show up so he'll have someone to talk to.

Heh heh... shows what you know about ham radio!....when hams who actually get on the air find
the need, they just modify their channel. You know, things like variable width IF, various filters, IF shift all those things you're unfamiliar with since you'vve never actually used any of them.
Sure, you can reconsult Shannon to get the skinny on the new channel, but we hams have no need to do that, if you don't already know. We'll leave all that to you and Putzie to handle in
your spare time for your own entertainment. We have more interesting things to do ON THE AIR.
IT DOES NOT APPLY to ham radio operation, you fool!

>
> > "The Channel" is whatever the ham radio operator, and his gear, set it to be. So when I

Ask Cecil, it was his assertion. And if you actually look into it you may find that the DSP function in the PC used includes a PSK filter at 30 cycles -thus the
name PSK31. Eureka!

>
> The problem is you are comparing two different data rates

> as can easily be demonstrated using Shannon's formula.
>

Yeah, Frosty, most of us know all that, it's been well published, and quoted here for some
time. But it still has no applicability to ham radio outside the theoretical.
Yep, Shannon was a mathematical genius. I guess it makes you feel good just to
think about it all, doesn't it? But any ham *of experience* could have told you how it
worked
long before Shannon came along! No math needed, beyond that which one does automatically in
your head as conditions show need for changing a receiving parameter...
But you can't know any of that, you're not an active ham, you just hold a license.....

I'm glad you made that clear. Then it certainly isn't "the Extras" You
mean anyone of any class who supports continued morse testing.

Sure it is irrelevant. My own experience is that most CBers I've met
don't have much technical knowledge, know little about propagation and

have poor operating skills and habits. If you see someone driving a primer gray and blue pickup truck sporting a CB whip, hauling a second hand mattress and the truck is driven by an unshaven guy with a ball cap and a T-shirt featuring the Confederate battle flag, do you say to yourself, "Now there's a fellow I'd like to hang out with"?

> The fact that Larry was a CBer, yet talks down to folks with such a
> superior attitude, shows what a hypocrite he is ...

The operative phrase here is "Larry was a CBer..." That's probably how he came to realize the limitations of CB radio with its low range and population of those doing bad "Smokey and the Bandit" imitations. Larry chose ham radio. I don't choose to spend my time with NASCAR fans or those who think an evening of fun is going to a karaoke bar. That's freedom of association.

Agreed. I personally find that the following approach works pretty well. CB QSO's on SSB generally have something in common with AR QSO's, "what kind of gear are you running?" The minute I tell them I'm using a 40m dipole through a tuner, I usually get one of two responses. "Are you an amateur?" usually comes from those wha are also ARO's. "What's that and how does it work?" comes from those who are genuinely interested. I'm all too happy to oblige them. Funny thing is the 40m doublet actually shows a 1.4:1 SWR on 27.3850 MHz (Ch. 38) with the tuner offline, go figure.

You're now posing as me, Roger? It'd be real tough to killfile your many anonymous remailer identities, Roger. Now you're using my e-mail address.

What, by the way, is your fixation on Lackland AFB? I haven't been there for over 32 years. I note your attraction to the material on my web site.

Anyone interested in finding out more about Roger's activities can do a google web or newsgroup search on "Roger Wiseman", "KC8JBO" or "AB8MQ". If you don't have strong stomach, skip it.

Roger hasn't been exactly a credit to amateur radio either:

It hasn't been demonstrated that he knows more about radio "then" me.
There is every possibility that Len knows more about electronics theory
than me. There is a similar possibility that I have much more
operational experience in "radio" or that I have much more knowledge of
wave propagation than Len. There is a certainty that I have forty years
more experience in amateur radio than Len.

> How can that be if he has no experience?

What I wrote addressed Len's experience in amateur radio. He has none.

>
> And you are unsatisfied with yours?

Yes indeed, much as I am with my guitar playing. I've been in amateur radio and have played the guitar for forty years. I learn something new about both and sharpen my skills in both with every passing year. I am never satisfied with what I know and what I can do. I do not advocate striving for mediocrity.

> Must you try to tear down Len at every opportunity to boost your stature?

Poking fun at Leonard Anderson has never been done for purposes of boosting my own stature, nor is it a "must" on my list of things to do. If I had to list reasons for doing so, I'd likely come up with a list like:

1) Because Len Anderson does it to others on a continuing basis

2) Because my views are in opposition to those held by Anderson, a non-radio amateur.

3) Because Len comes across as a pontificating windbag who sees himself as an expert in all things relating to radio communication.

4) Because it is soooooo easy.

That's totally irrelevant to the discussion at hand.

I do no such thing, Roger. What is your fixation with child
pornography?

> > yet another anonymous post.
>
> If this is anonymous, how do you know who sent it, dumbass?

Roger: "Duuuuh, how'd you know it was me"? Shall we say that you have a
rather unique writing style and that your topics of interest repeat
themselves on a regular basis.

> > I've attended a number of meetings and
> > functions, Roger.
>
> Guess you had to suck off Bertie Garcia one way or another, eh, ASSHOLE?

No, Roger. What is your fixation with homosexuality?

> > I'm told that you only came to the one meeting.
>
> I'm told you shouldn't stalk other hams like you do, kiddie diddler.

It is peculiar that one who has posted numerous untruths about others
would consider himself to be a stalking victim. What is your fixation
on sex with children?

> > By the way, I'd go very carefully on that stalking stuff, Rog. You've
> > frequently harrassed me here and in direct e-mails.
>
> Awww, poor Dicksucking Davey.......you stalked Rog as well, because the only reason you came to the ARES meeting to confront him, and let's not forget how you were going to break the law by posting his "best newsgroup material" on telephone poles in Rog's neighborhood.

What is your fixation with homosexual activity, Roger?

Bert and I attended an ARES meeting at the invitation of the Emergency
Coordinator for purposes of joining.

I think you've gotten your wires crossed on the breaking of law, Roger.
You were asked if you'd be proud to have your wife, mother or children
see some of your handiwork. You were asked if you thought your
neighbors would enjoy seeing some of your memorable posts tacked to
telephone poles in the neighborhood. I can post my exact comments and
your sparkling reply here if you feel that would set the record
straight. After all, you seemed to think enough of your numerous
newsgroup postings to post them in this very public venue.

> > You have an arrest
>
> I do? Prove it.......

It is public record, Roger. By the way, is this another "Duuuh, how'd
you know it was me"?

> > record and you've been booted from a couple of ISP's.
>
> Bwhahahahahahahaha....prove it, kiddie diddling Dave.

One note to OVIS should clear that one up. What is your fixation with
child sex?

> > You've been
> > cautioned for malicious QRMing on 20 meters and have been forced to
> > retest.
>
> So some fake info was submitted and dumbfuck Riley believed it.......

Who Riley? The fake info was in the form of audio tape. I know the
fellow who supplied it. I have no reason to disbelieve him and to
believe your claim that it was "fake".

> he still PASSED the "retest" it's doubtful you could as of today, ASSHOLE.

"He/you" passed. Whether I could or couldn't isn't an issue. I wasn't
contacted and told that I needed to retest. There's been no enforcement
action taken toward me in forty years.

> > > > Most of the hams

> Poor Davey......the Lackland press release boy, the flunky who couldn't get/or was so
fucking stupid he couldn't get a real job then after a piss poor service record, had to
take a flunky courier job with the State department, until he was terminated.

What is your fixation with Lackland AFB and my web page? I haven't been
to Lackland in over thirty years. You know nothing of my service
record. I have an honorable discharge from the military. You know
nothing of my State Department service other than what you can glean
from my web site or here.

> > Actually, Roger, the only real loser is you. You're hardly a clique.
>
> IKYABWAI, dicksucking Davey.....

What is your obsession with homosexual oral sex?

> Actually, kiddiediddler High-el, how is it you had to get a mail order bride for
yourself? Maybe it's you lack of personal cleanliness, as evidenced by the stench you had
when you attened that meeting and your wrinkled clothes.

What is your fixation on sex with children?

I don't have a mail-order bride. I bathe on a regular basis and my
clothing is washed and pressed. What is your fixation on body odor and
wrinkled clothing?

> > > > I continue to attend. We interact
> > > >
> > > Except the fact you fail to bathe regularly, you mean.......fuckstick.

I don't recall your being here during shower time, Roger.

> > It looks like your still battling that rare form of Tourette's Syndrome.
>
> Looks like you need to go to Hair Club For men and Jenny Craig.

There's a hair club for Jenny Craig?

Dave has a bad comb-over and his fat belly makes him look like he's
about 8 months pregnant. Given this along with his wrinkled clothes that
he looks like he slept in for a week, he makes such a good impression...
> With that small skull he really looks like Baby Huey.

Your powers of observation are lacking, Roger. I have a full head of
hair without even a hint of a bald spot. My hat size is 7 7/8 which is
considered "Large". If you like, I can post a photo of the top of my
head so that others won't engage in a "comb over" debate. Why is any of
this of interest to you, Roger?

> > > >based on our common interests rather than the things which divide us.
> > >
> > > Yeah, those common interests being not helping newer hams......
> >
> > How could you come to that conclusion?
>
> Unlike you, I don't pull my conclusions out of my ass, goat blower Davey.

Where'd they come from then?

> > You haven't been attending
> > meetings.
>
> When some new hams needed help, they didn't get it, fuckstick.

Who are the new hams who needed help? What was the help requested of me
and why wasn't it provided? You seem to be a little short on facts
here. Care to comment on the fact that you don't attend meetings and
would have no way to know about anything which goes on unless overheard
by you on a local repeater?

> > > > > The other alternative is to start my own club. I tried it, but that was not too

> > skills.
>
> BWHAHAHAHAHAHAHA..... you've said that ALL ALONG, DICKBREATH....

Yes, I have. That's because, as you aware from being paid a number of
visits, that is what I have been doing. What is your fixation with
homosexual oral sex? How would you, the non-Roger anonymous poster know
anything about what I've said all along? "Duuuh, How'd you know it was
me"?

> Maybe you need to give him another blowjob so he might pay attention
> to you next time..haven't heard a thing from him though

Is that how you write about your chief of police--a man who is on your
city council?

> ....some
> case, dickhead...... BWHAHAHAHAHAHAHAHAHAHAHAHAHA...maybe it's because > I don't live in Glen Dale, Davey, not everybody who posts anon is your > obsession.

Maniacal laughter aside, Roger, is this another, "Duuuh, how'd you know
it was me"? Do you know how few anonymous posters post items about me
filled with nonsense rants about child pornography, sex with children,
homosexual oral sex, fixations with body odor and wrinkled apparel?

> > Ta-Ta for now.
>
> Your not-so-Closeted homosexuality, noted.

You fascination with homosexuality is noted.

950. Firm Date for Germany

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-11 15:51:09 UTC
From: Alun Palmer <elektros@yahoo.com>
Message-ID: <Xns93D478705383elektrosmdonet@130.133.1.4>
Source record: 74314

So far, Switzerland, the UK and Belgium have axed the CW test.

The IARU modified s25.5 effective the 5th of July so that CW testing would be optional for administrations.

Switzerland announced on the 6th of July that letters would be sent out to all class 2 hams giving provisional access to HF from receipt of the letter. By the 15th of July most Swiss hams had their letters. HB still has a Class 3 licence with only 2m/70cm, but no CW test is required for any licence.

The UK abolished CW as a requirement effective the 26th of July. The licence structure is now Full, Intermediate and Foundation with different power levels. Foundation licencees cannot use 10m. CW tests are still available for a proficiency certificate for reciprocal operating.

Belgium abolished the CW test on the 4th of August. Class 2s have to apply for a Class 1 licence to use HF, but it only takes three days to get one, and no CW test is required. I understand that ON has also now introduced a Foundation licence.

Apparently, 'Funkamateur' magazine reported (incorrectly) that Germany would abolish CW testing on the 6th of August, but nothing happened. Now DARC (the German ham soceity) reports that from the 15th of August German hams with Class 2 licences will be able to use their existing calls on HF.

The German text follows:

RTA im BMWA
Klasse 2: Jetzt geht es weiter!
(11.08.03/js) Ab 15. August 2003 d&#65533;rfen in Deutschland Inhaber der CEPT-Klasse-2 mit ihrem pers&#65533;nlichen Rufzeichen die Kurzwellenb&#65533;nder unter Einhaltung der daf&#65533;r g&#65533;ltigen Bedingungen benutzten. Dies teilten die Mitarbeiter des BMWA dem RTA-Vorsitzenden bei einer Besprechung mit. Das BMWA wird dazu noch in eine gesonderte Pressemitteilung ver&#65533;ffentlichen. Weitere Einzelheiten folgen.

Jim, to add a few to your list........

Question #10 Do TV Channels 2 through 5 use spectrum in this range?

Question #11 Do you know that even with Digital TV that broadcasters will still have to broadcast on the old frequencies until about 80% of the households in their class A & B coverage areas upgrade to digital? This means that VHF over the air brodcast will likely go on well past 1996.

Question #12 Do you know that RC aircraft use spectrum in the 70 MHz range for control?

Question #13 Did you know that there are literally millions of RC flyers out ther and some of these aircraft tip the scales at over 30 pounds, are powered by actual tubojet engines and can approach 300 MPH?

Question #14 Do you really believe that the cutoff frequency will be sharp enough to stop interference to at least the upper part of AM broadcast and the lower part of FM broadcast?

Dick, your technical ignorance is showing TWOFOLD.

First, Floyd said "the SNR and get more channel capacity
> > regardless of the bandwidth" ... which is clearly true.

Second, you said "When you can increase the SNR by narrowing
the bandwidth? I knew you has your head on bassackwards."

You certainly CAN increase SNR by narrowing the bandwidth.
Since noise is essentially constant across the spectrum, it can
be measured in noise power per unit bandwidth (noise power/Hz).
Thus, in a 1 kHz bandwidth, there will be 1000x more noise
power (30 log 10) than in a 1 Hz bandwidth. Thus, the noise floor
is lower in narrower bandwidths.

What part of this don't you get? (How did you pass the Extra test
anyway???)

Carl - wk3c

Sounds as if you, like Larry Roll, don't want to have anything
to do with any of that "Empirical Theory" stuff of his, eh?

Perhaps I remembered the previous discussion incorrectly? Were
you using a 2.4 KHz channel, or a 200 Hz channel? In either
case the agc, and hence SNR, are affected by the noise in that
channel, not the 30Hz filter in DSP software.

But once again, Shannon *does* apply to everything you've got there.
If you want to actually understand it, that is the *only* way to
explain it.

Or you can continue to be a glorified CB operator.

>> In fact, what you've done is demonstrate that Shannon's work

>applicability to ham radio outside the theoretical.

Apparently your Empirical Theory is a little sparse there DICK.

Why and how do you think PSK-31 was invented to begin with? It clearly does have practical benefits, and when you attempted to use PSK-31 you *were* making use of those benefits.

>Yep, Shannon was a mathematical genius. I guess it makes you
>feel good just to think about it all, doesn't it? But any ham
>*of experience* could have told you how it worked long before
>Shannon came along! No math needed, beyond that which one does

If that is so, then just exactly why didn't they? No Ham did tell anyone how it worked. _Nobody_ knew! What they knew up to that point was what Nyquist and Hartley had figured out. But once again, that won't be part of your "Empirical Theory" experience will it...

Tell us just how many hams were experimenting with m-ary encoding schemes prior to 1947. (Just try to find any that had even heard of it!)

>automatically in your head as conditions show need for changing
>a receiving parameter... But you can't know any of that,
>you're not an active ham, you just hold a license.....

So if I was to get on the air and talk to folks like you and Larry I, like you, would be less concerned with "Empirical Theory", eh?

Increase the SNR by narrowing the bandwidth???? That doesn't work!
(Do you know what Gaussian distribution means.???)

You increase the SNR, regardless of the bandwidth, by increasing the
signal level DICK. Probably an idea you've never thought about, eh?
Too close to Empirical Theory, no doubt.

Which is EXACTLY the meaning of what I said in question form!
Uh, Carl, where'd you learn to read?
You don't think that "bandwidth is central" when you can increase
SNR by narrowing bandwidth? What physics do you and Frosty practice?
Surely not the same that ALL hams do. Narrowing the bandwidth to eliminate
noise and other interference IS the most common way to get it done, for
darn
sure within ham radio.

>Since noise is essentially constant across the spectrum,
>

No, it isn't, although I understand the concept of assuming it to be so
for any
reasonably narrow slice of spectrum under consideration.

> it can
>be measured in noise power per unit bandwidth (noise power/Hz).

>
>What part of this don't you get?
>

Where'd you get the idea that I don't get this???

That's EXACTlY what I said when I asked

"When you can increase the SNR by narrowing
the bandwidth?"

>(How did you pass the Extra test
>anyway???)
>
>

I'm beginning to wonder how you made it out of elementary school

I sure passed it long, long, long, long before you did, and at the FCC
district office!
Didn't miss a single question, either- you watch the grader's pencil
hand to see how many
check marks he/she makes. In my case it was none.

If you and your other buddy with limited or NO amateur radio experience
had spent some time on the CW bands WORKING CW instead of bitching about
the code test maybe you'd know some of this stuff without having to
resort to
an obscure theory that isn't even mentioned until third year of a
college EE program,
never appeared ANYWHERE in the amateur radio technical literature until
recently,
and only briefly in electrical engineering handbooks. You're absolutely
FIXATED on
insisting that all hams MUST have engineering level; knowledge and
experience in
manipulating Information Theory at the laboratory level.

What a load of Bullshit! ALL of radio got along quite well for a half
century before
Shannon ever thought it up, and after he did there was virtually no use
for it until the advent
of DSP chips.

So why don't you join Frosty out on the tundra and do a ritual dance to
celebrate Shannon
and all his math?

OBIT-- want work some DX? Here's my log from last night on ~14.010,
just sitting at the computer with the radio headphones on and idly
listening to what
was going on---

CYO
RN6AT
SV1LV

Betcha you won't catch many of those folks on 20 meter SSB these days.

And I didn't have to give Shannon a single thought.

And tyhe answer here is "So what? It wouldn't function **in an amateur
radio
communications channel** at a time and under conditions did allow CW to
function properly. Now as far as I, as a radio amateur, am concerned, that
is the pertinent fact, not that theoretically, and actually under
identical narrow
bandwidth conditions, that would not be true.

I leave it to you and your obviously flawed amateur radio buddies,
Kandid Karl and
Putzy Poo , to do as you wish, when you wish with Shannon's stuff. I
have no need for
any of it. Of course it's of interest, and explains how some of this
stuff works, mathematically
as though serious numbers of hams were actually involved in such
computations. They are not,
as you SHOULD know but clearly do not. Hell, memorizing a few
question/answer pairs
to get on the air and yak (should I say as you do?) won't have a clue
what you're
chattering about. I do. I know that they won't have any need to bother
with it.

Ask Carl's buddy W5YI what *HE* wants to do with the tests.

>Uh, Carl, where'd you learn to read?

Where did you learn to communicate?

If you increase the SNR by decreasing the bandwidth, you *don't*
get any increase in the channel capacity. What have you gained?

Nothing...

On the other hand, if you increase the SNR by leaving the
bandwidth as it is, and increase the signal level, you get more
capacity!

>You don't think that "bandwidth is central" when you can increase
>SNR by narrowing bandwidth? What physics do you and Frosty practice?

Try physics that actually accomplish something. What you are
suggesting has no effect on channel capacity.

>Surely not the same that ALL hams do. Narrowing the bandwidth to eliminate
>noise and other interference IS the most common way to get it done, for
>darn
>sure within ham radio.

It also reduces the channel capacity. At 500 Hz, with CW, you
are limited to what? 40 wpm or so for a good CW operator.

But with a 2.1 KHz bandwidth they could use SSB, for example,
and transfer *many* *many* times more information.

By *your* methods of comparision, you've just proven that SSB is
more efficient than CW.

(Of course, using your methods we could "prove" almost
anything!)

Yes, and here you are years later *proving* that none of that
was accomplishing a darned thing, because obviously *you* passed
so it can't have been working correctly. That's exactly why
none of that is now required.

>If you and your other buddy with limited or NO amateur radio experience
>had spent some time on the CW bands WORKING CW instead of bitching about

I'll bet that I have more time actually copying CW than you do!

>We believe you. NOT!

Your ignorance is showing again. I've never owned a CB radio.
I've had an operational CB radio in my home or at work.

And I've never lived where CB was used as a "major
communications venue".

Where do you get such odd ideas? I even posted an article here
once that went into that in some detail too, but you seem to have
misunderstood what was said. Why don't you go back and *read* it
this time.

> And tyhe answer here is "So what? It wouldn't function **in an amateur

All fine and dandy, except that you then try to say that means CW
is "more efficient". You haven't shown that at all. With your
methods we could assume using wideband TV is more efficient too.

As a dilletante, I realize that in any ratio, there are two numbers.

So while it is quite possible to make the s/n ratio larger by
increasing the signal, it is equally possible, and sometimes much better
to increase the s/n ratio by lowering the noise. Sometimes it is the
only option available.

Seems like narrowing the bandwidth might just do that!

your humble hockey puck, 8^)

It doesn't work to do what you said above, which is increase the
channel capacity.

The problem is you don't understand the theory and continue to
attribute various results to the wrong source, and applying it
to claims like your "proof" that CW is more efficient than
PSK-31.

>

AH, we finally arrive at the core issue! The VERY reason I say that
Shannon has nothing
to do with ham radio.. One more time, with feeling---

"Maximum throughput is NEVER a requirement.or even an issue in ham
radio!!!!"

You see, Frosty, we NEVER need to do things like the military and some
commercials.
We don't use our radios to handle the most traffic the fastest it can be
handled. Anyone who
watdched the packet network disintegrate due to all the "store and
forward" nponsense that went on in teh late 80's knows of which I speak
Reams and reams of nott they sure passed a lot of it!

>

And we all already knew that, didn't we? ALso we *hams* knew that we
didn't inten d nor want to get more channel capacity! What *we* want is
to complete the intended communication!

> As I've pointed out previously, the

You're a lightweifgh here t, Frosty, a number of the REAL learned from
academia have stated otherwise.

> DSP chips were a
>*result* of Shannon's work, not something that enabled Shannon.
>
>
>

And I Didn't say otherwise. However anyone famililar with any of this
will know that the DSP
chips were not possible until LSI technology matured, some 35 to 40
years after Shannon's
fantastic discovery.

It reminds me of a different strip. The lemmings are rushing over the
cliff, and one grabs his ankles and yells "CANNONBALL!!!!"

> According to you, the USA is the only country in step in the
> parade.

Nope.

According to me, the USA has a better system and the other countries
haven;t caught on yet.

Here in the USA we have some roads reserved for autos only, and some
lanes reserved for car pools and transit buses. Act as incentives to
use more efficient means of transport. Also acknowledges the basic
incompatibility of small and large vehicles. Non-phone subbands act as
an incentive to use more efficient modes than analog voice, and
acknowledge the basic incompatibility between wide and narrow modes.

And the only reason "DX windows" exist is so that foreign 'phones have
a place to go where they won't be buried by hordes of 1.5 KW USA
'phones. IOW, so the DX can work each other once in a while.

>
> If the USA followed along it would no longer be chaos.

Yes, it would. In fact, it would be worse, because the DX would have
nowhere to hide.

Ask yourself this: Why do DX 'phones operate in the US CW/data
subbands at all if they can operate in the US 'phone subbands?

It doesn't. I have had it for over two years now and it's done very
well.

> Of
> course, that may have been due to the person who put it together.

The classic problem with kits is that they are only as good as the
builder.

Almost all contests have separate CW and 'phone weekends. (FD and ARRL
160 are the exceptions that prove the rule). The ham population can
choose to operate one, both, or neither. CW participation is UP while
'phone is flat.

Exactly what I've been saying all along---- Ham radio is NOT ruled by Shannon. We *still* have
NO need to join the footrace for maximum throughput, and that isn't going to change. The type of
communication hams do are simply not adapted to use nor need i, nor will they bet.
That's true even emergency situations. High rate throughput means little or nothing to us

And NO, SSB wouldn;'t have worked even better, nor as well. I was hearing several extremely weak PSK31 stations from Europe on a virtually dead 20 meter band with polar phase shift present. I seriously doubt I could have understood a SSB transmission at the same power level as the PSK and CW. But I was able to copy the CW!

> As a dilletante, I realize that in any ratio, there are two numbers.

Actually, there are three (bandwidth, signal, and noise) which
are related to channel capacity by the following formula

Capacity = Bandwidth * Log2 (1 + Signal/Noise)

The debate is over comparing *efficiency* of different modes (CW
and PSK-31), and hence the channel capacity for such a
comparison, must be normalized.

Reducing the Bandwidth parameter does decrease the observed SNR
in the channel, but the Capacity is not increased because the
actual noise power per Hz is unchanged.

> So while it is quite possible to make the s/n ratio larger by
>increasing the signal, it is equally possible, and sometimes much better
> to increase the s/n ratio by lowering the noise. Sometimes it is the
>*only* option available.

However, what has to change is the noise power per Hz, and
reducing the bandwidth does not change that.

> Seems like narrowing the bandwidth might just do that!

Increasing the signal power has the desired effect. There are
other ways to accomplish that, of course. Reduction of noise by
any means other than reducing the bandwidth (switching from an
omni directional antenna to a directional antenna, for example)
will have the desired effect.

CW is a data mode. All other data modes change too fast along the lines of "flavor of the month". Which data mode would you propose be used for emergency communications. There is RTTY, Amtor, packet, Gtor, pactor, PSK31, and a host of others. PSK31 is new enough that there is activity generated by its very newness but will it last? Even now the techies are moving on to the "next generation" version of PSK31. Outside of PSK31 and RTTY, the other computer aided digital modes are now scarce to non-existent on the HF bands.

In a practical sense, the computer aided digital modes won't be as useful as some people like to tell themselves since there just aren't that many people working any one mode.

Heheh. Well, I tried. We'll have to mention her when he sends out his
standard missive on nonexistant attractive TL's.

Not that it matters how attactive a YL or XYL is. At least in the ARS
context.

NOWHERE have I *ever* said that and if you can read you'd know it! In
fact what
I said is exactly the opposite - that ham radio never needs to maximize
throughpout, rether
what we need is to be able to modify the "channel" to meed the needs of
the moment.

WRONG, WRONG,WRONG, Frosty! Yoiu're the dude with the misunderstanding
problem!
I've said all along what I say now- Shannon has no impact on hams
working ham radio on the air. We don't need the benefits shown by his
calculations. When our gear is designed radically differently that MAY
change.

It would be if I'd said it! But YOU said it! I know better. I also
know -right alaong with every active ham- that you increase SNR by
narrowing bandwidth. Seems it gets rid of some of the noise while
preserving the signal, assuming of course the signal is narrow enough to
fit within the narrowed bandwidth. As it happens, a CW signal is!

That's nice, Carl. However, it's the exact same argument I've repeatedly used throughout this thread (the same argument concerning CW). In other words, you're preaching to the choir and, on top of that, preaching what the choir has already pretty much said.

Dwight Stewart (W5NET)

Mike, Floyd is a perfect illustraition of someone who has no real
amateur radio experence. He is accustomed to commercial circuits where
the power can be raised to compensate for poor channel conditions. We
hams have a problem doing that when copying a weak one from the other
side of the planet.

Or course anything that can make the ratio of signal/noise improve will
change it, and obviously that includes raisnig the signal just as it
includes narrowing the bandwidth to slice off noise.
In the olden days they used to sell a receiver attachment called a
Signal Slicer. Guess what it did? :-)

Wasn't maritime MF Morse capability mandatory until the satellite based distress system came online?

> areas. No Radio Officer needed.

Sure. And the reason all that happened was that the shipping companies decided to make the inital investment in SITOR equipment, and pay for it with the salaries of the laid-off radio officers. And as long as the SITOR equipment does the job and costs less per year, there will be no reason to replace it with something better.

Exactly - the improvement was judged to be not worth the investment. Since decisions like this are made at the top and conformity is deemed more important than what people *want* to do, the existing system is kept.

Which is why you can watch a 2003 TV show on a 50+ year old TV receiver. NTSC, anyway.

> And the US Coast Guard and other similar agencies world-wide

But how much AMTOR will be found in the HF ham bands today? I daresay not much.
In fact you'll probably find more 60 wpm Baudot RTTY on the ham bands in the
course of a year than you will find AMTOR. (if you count contests).

Sure - if the channel's characteristics are good enough.

There's also the question of what FCC will allow in symbol rate and such.

> But hams are cheap - nobody (including me) wants

I disagree with hams being "cheap". It's more a matter of not being able to
write off expenditures. Businesses can depreciate equipment - hams can't. They
can also pay for equipment out of reduced labor and repair cost - hams can't.
Engineering economics 101.

> in the mode(s) they are testing on?

At this point, it's not important or needed for morse
testing has LONG AGO deleted the "sending" part
of it and relied ONLY on the applicant decoding
pre-recorded tapes.

> Seems to me that if someone is going to
> qualify as a VE, they should be at an extreme proficiency level......

I've helped correct tests for teachers for subjects I
knew nothing about...nothing extradordinary there with
multiple choice...or checking a submitted set of
decoded morse text.

> If a VE or VE team cannot effectively send a method of communication like
> morse code as a required testing mode, it makes me wonder of the value of

> tapes, I guess that would show the "dumbing down" of amateur radio,
bringing
> it "one step further to extinction."

The reliance on tapes and CDs is because it is NOT all that
easy to be right on with sending code at any set speed (5, 13, 20
or whatever) by hand.

It is far easier to "machine generate" code text at specific speeds
and record them for a permanent use in testing.

> Seems to me it should not be a problem for the whole VE groups to have a
set
> "pre-scripted" QSO's. There could be as many as needed, 10, 20, 30 or
more
> pre-made QSO's to send.

Far better to have the 20-30 or 40 prescripted QSOs recorded
and simply play back one. I initially learned morse for the
5 wpm test using 78 rpm record set from (I think) AMECO.

But, for all this speculation, the code test is soon to be just a historic
footnote, so what's all the fuss?

Cheers,

I obtained enough knowledge through amateur radio that I was able to take a "Bypassed Specialist" exam in basic training. The Air Force gave me the "3" or apprentice skill level and allowed me to bypass tech school. I was sent to my first assignment and obtained my "5" or journeyman level skill code through OJT and correspondence classes. The military, at least back then, recognized when an individual had enough knowledge to skip military training in the "radio arts". Do you know when the U.S. might need trained operators or when another draft will be

instituted?

> Does national defense or the various aid agencies NEED amateurs who

Your "don't look now" phrase is about as old as ROFLMAO, Larry. And, I am
not jealous of this lady at all. More importantly, her sales volume would
be of little significance to me, since I am not in sales. My point was that
she probably has a lot of lookups because of people remembering her call
from a trade show and seeing if there's a link to the company she
represented.

Oh, hey, why don't you look her up and get a date, Larry. Looks like you're
interested.

You've told us about morse landline telegraphy. Did you LIVE THOSE
TIMES? Do you KNOW? Maybe you read it in a BOOK or saw an article on
the WEB. :-)

> >The boom in the 60's was probably due to the emergence of economical
> >JA radios, a general increase in the interest in electronics, and later, the
> >emergence of VHF/UHF FM and repeaters ...

Incorrect. There was no boom of JA radios in the 1960's.

> It's difficult for even old-timers to understand a postwar boom period and
> the Cold War getting hotter when they've just reached First Grade. :-)

I don't know about when you were in school, Len. They provided us
history books. Most of us figured out that there was additional
historical material available. :-) :-)

> The holier-than-thou old-timers insist on the "no-coders" to do all
> the technical advancements in amateur radio. Never mind that they
> weren't able to do much in a half century. :-)

What's it to you? You aren't involved. If you're to make any technical
advancements in amateur radio, you'd better get cracking. You've wasted
decades talking about "getting into" amateur radio. :-)

> The holier-than-thou old-timers won't hear of "being nice" to newcomers.

Love your "fox and the grapes" routine. You got the callsign and
privilege portion partially correct.

> Nobility suffers the peasantry, poor things.

In this game, you aren't nobility and you aren't a peasant. You're an
onlooker.

That's where your lack of acumen shows, Dick. Hams should
strive to communicate efficiently. Inefficient use of our spectrum
promotes congestion in the popular bands. Inefficient use of our
spectrum will subject us to increased threats of spectrum grabs
by commercial interests.

WHAT "pre-empting of any negative critique?"

Here is the full text as it appeared in the right-most column of the Los Angeles Times Sunday edition, 10 August 2003, page A34:

==========
Jim Weir

Age: 56

Occupation: Electronics technology instructor and small-business owner.

Residence: Grass Valley

Education: B.S., physics, math and aerospace, San Diego State, 1967.

Career Highlights: Designed landing radar for the Apollo lunar spacecraft at Teledyne Ryan. Founder and president of small aircraft electronics company. Served on Nevada County Board of Supervisors, 1986-94.

Quote: "My motivation is obviously to win, but also to get the maximum number of people to the polls so that this election is not determined by a small minority of voters at either end of the spectrum. Transportation and education are the heart and soul of California; they need to be dealt with at all costs."

==========

The Sunday edition of the Los Angeles Times had no less than NINETY-SEVEN biographies of the 158 total filings needing FOUR FULL PAGES of the main section. The remainder of the 158 were listed briefly on the fourth page and continued on a fifth page.

There is no real need for Jim Weir to apologize for anything but it is gracious of him to do so. The Apollo program involved many teams of designers-engineers-craftsmen-technicians all over the USA in many corporations. Apollo was a resounding success, a credit to EVERYONE on all the teams.

Nevada County is a county in mid-state California, in the midst of California's "Gold Country." Nevada City is a wonderful place featuring many historical sites and reminders of the gold rush times of the 1800s. My wife and I had the distinct pleasure of walking in Nevada City during a local fair, guided by my old friend and colleague Jim Hall (KD6JG) and his wife Terry. Jim and Terry live in the outskirts of Grass Valley in a beautiful home and are gracious hosts.

I don't know Jim Weir personally but we have corresponded some in e-mail on other things. I was surprised and delighted to find Jim Weir's name in the L.A. Times after Sunday breakfast. I wish him all the best in the "recall circus" election for governor of California in October.

Some in here, too keyed to message point making and emotional attachment to "credentials" will make a big correlation to Jim Weir being a radio amateur. I really don't think that ham radio has much to do with that since Jim Weir is a professional in radio-electronics. Further, his serving eight years as a county supervisor is not a job for amateurs in government and politics.

Those who want to practice the puerile geo-political bashing in here should remember that, if California was ranked as a nation, its annual budget would make it the fifth to seventh in the world, greater than most of the other countries in the world. About one out of nine Americans live in California now, the most populous state in the USA. California feeds much of the USA from the agribusinesses in the San Joaquin Valley and is the aerospace center, both in aviation and electronics, of the nation.

Leonard H. Anderson
retired (from regular hours) electronic engineer person

>Ahh, Ahh, Len! Please remember that you enjoy hanging out here with the
>hams, fantasizing that you are somehow a part of amateur radio.

I've NEVER been a "part" of ham radio according to YOUR OWN
DEFINITION.

YOUR fantasy seems to be stuck in the rut that whatever YOU like
"defines" what ALL other radio amateurs do, think, and must act
like in some rigid set of rules of YOUR imagination.

YOU are NOT an authority or an official anything in US ham radio.
YOU are NOT an official in the FCC, federal government, or even
that pseudo-governmental organization called ARRL.

YOU have NO authority to call anyone anything, demean them,
make fun of them, or anything else...yet YOU continue to do so.
That indicates the perversity of your control-freak psychosis.

I've been a professional in radio-electronics since 1952...51 years.
I've also been a radio-electronics HOBBYIST since 1947. Hobby
activities not for pecuniary interest are AMATEUR activites. If they
involved making money at it they would be professional activities.

YOU keep insisting one MUST be "licensed" to be an AMATEUR.

YOU keep holding up having a license grant is somehow making
YOU "better" than anyone not having an amateur license. YOU
seem to think that amateur radio is some event of epiphany, of glory
and greatness in radio, some kind of nebulous "service" to the
nation, transcending anything done in any other radio service.

Feel free to indulge in your fantasy. Just remember that your output
of constant personal attack of others not accepting your views makes
YOU the perverse individual here.

I'm just arguing against a morse code test for any US radio license but there is this constant barrage of Personal Attack filth from the fantasyland control freaks diverting everyone from the subjects to the usual flame fest flings that must make your warped mind happy.

So far, you haven't "won" anything. Why do you keep on with the same old flame trash?

Take your medications, pSycho pSteve. You are still in fantasies.

The "fidelity of a TUBE-based radio" is a myth, a fantasy, and probably concocted by other ignorant radio piddlers who want to apply supernatural "magic" to something they aren't able to comprehend.

>> "Real radios glow in the dark" and that sort of thing. "Warmth."

The solid-state era began in industry about 1960. That's 43 years ago.

Radio AMATEURS didn't really discover it until about two decades later. Still, that's 23 years ago.

Hardly a recently changed technology. :-)

>It hasn't been demonstrated that he knows more about radio "then" me.

YOU won't accept any evidence that any court would accept as
valid. You wish to posture as judge, jury, and executioner. You
are none of those.

I've presented just a tiny bit of the "evidence" I have on what I've
done, complete with all references for independent investigation
in this newsgroup. You have disregarded all of that, preferring to
act the judge, jury, and executioner in order to "win" some kind of
"debate" that only exists in your mind. You have presented nothing
but generalities without any corroborating evidence.

You insist on making this some kind of personal "battle" over some
imagined "superiority" in amateurism and the "elitism" as well as
"superiority" of your status, rank, title, etc. in nothing but amateur
radio. That keeps happening regardless of the subject title or thread.

You keep forgetting you aren't any official and aren't any judge (you
keep falling off the bench). You may think you speak for some
"majority" of ham radio but all you do is speak for yourself. All you can
do is attempt to put down others not agreeing with you.

>There is every possibility that Len knows more about electronics theory
>than me.

Not only theory, but design, practical hardware prototyping to finished
product, field application and liason, and writing about it in national
magazines. I've done all that as a professional AND as a hobbyist in
radio-electronics.

>There is a similar possibility that I have much more
>operational experience in "radio" or that I have much more knowledge of
>wave propagation than Len.

"Wave propagation?" Would you know Biot from Savart? E and H
fields? Knife-edge diffraction? Were you intimately involved with HF
communications across the Pacific in the early 1950s for "24/7"
primary communications service? I can go on and on without ever
touching the recorded and evidencible facts of having spent three
years being actively involved with the latter. That grates on you.

Put that in your Icepack and stroke it.

>There is a certainty that I have forty years
>more experience in amateur radio than Len.

I've been a radio-electronics hobbyist for 56 years and never bothered
to get any amateur radio license with its official certificate plus the
rank/title/status accorded it by some other amateurs. You ARE
granted that one item but it would seem you've never ventured out of
"the bands" (HF) for all your tenure as an amateur.

>> How can that be if he has no experience?
>
>What I wrote addressed Len's experience in amateur radio. He has none.

Since when is that SUCH an important factor in "radio?"

The FCC doesn't require any commissioners or staff to hold amateur
licenses. The Congress of the United States has never chartered the
FCC to "only" regulate US amateur radio by licensed radio amateurs.

You keep acting like some kind of land squatter, claiming territorial
imperative and divine right for holding a grant a long time. That alone
is NO evidence of ANY expertise, only the ability to not be caught for
violations and being able to renew your vaunted license every decade
or so.

>> So why so do you give him so much attention?
>
>A smart fellow would have figured out that laughing at Len isn't exactly
>an endorsement of his views.

You wish to squelch all opponents to your royal viewpoints by trying
to make fun of them, trying to put them down.

You can't bear the thought that your viewpoints aren't of the nobility, divine statements of some higher radio god. Since you can't talk on the subjects, you try to hit the person of the communicator.

That's been evident for years in here.

>> Must you try to tear down Len at every opportunity to boost your stature?
>
>Poking fun at Leonard Anderson has never been done for purposes of
>boosting my own stature, nor is it a "must" on my list of things to do.

Tsk, tsk, tsk...false claim.

It is fairly clear what you do to anyone not embracing your godlike views of amateurism...try to put them down any way you can.

After all these years you keep failing. The technique doesn't work.

>If I had to list reasons for doing so, I'd likely come up with a list
>like:
>
>1) Because Len Anderson does it to others on a continuing basis

Poor baby. It's "okay" to attempt humiliation of others because you are a radio god and you've been an amateur for four decades.

Sigh...another over-inflated EGO...

>2) Because my views are in opposition to those held by Anderson, a
>non-radio amateur.

Hardly. :-)

Google is full of Heil's put-downs and humiliations of NON-licensed radio amateurs...because Heil feels they are "inferior" to his godlike status. :-)

>3) Because Len comes across as a pontificating windbag who sees
>himself as an expert in all things relating to radio communication.

Poor baby. More damage evident to the super ego of Heil's.

I've never claimed "expertise" in any field of endeavor, just a few where I've had lots of experience, hands-on experience for a long time. That's anathema to Heil and his "superior" four decades as an AMATEUR.

To quote another quoting a late ballplayer, "It ain't braggin if ya done it."

I've done a lot. :-)

>4) Because it is soooooo easy.

No...because you are unable to argue on the subjects. All you can do is attempt put-downs, attempt humiliating others who won't worship you as the "foremost authority."

Living a fantasy is VERY easy. No work required, very little thought.
Fantasylands allow anyone to destroy their "opponents" with impunity.

Feel free to indulge your super ego and demand all do as you say.
Few will. You aren't the "authority" and are no "official." Your credence
went to hell along with your robust oberst uniform a long time ago.

>a pool of (CW) trained operators was legitimate.

You are right, but haven't pointed out that was a half century ago,
Carl. :-)

>That is no longer the case. Trained ops, yes, but trained in what is
>actually USED in modern day emergency communications, which is
>overwhelmingly voice (VHF/UHF and HF SSB, and data modes).

It's no use trying to show reality in here, Carl. <shrug>

These folk are obediant servants of the Church of St. Hiram and all
things in amateur radio are as they were back before WW2. To
show reality and all the other radio services' modes and operations
is tantamount to heresy. Blasphemy, even...

>
>I hadn't noticed that anyone isn't recognizing it, Lennie.

No one HAS recognized your greatness. It isn't there.

But you keep insisting you have it.

Beeperitis.

>I am a BUS DRIVER, remember?

Strange...you keep insisting you are a "paratransit specialist."

Which is it?

>My knowledge of communications is
>limited to what I've done in AMATEUR radio, and the use of my 800 MHz
>voice/data comm system in my bus.

You've been licensed as an AMATEUR how long? And you've never
bothered to find out about radio technology since you became an
extra something-or-other?

Are you LAZY?

>Lennie, you're obviously in need of new reading glasses. I've never claimed
>to be anything but an average ham with average, AMATEUR-level
>technical skills.

Tsk, tsk, tsk...how quickly they forget. You claimed to be in the "upper
percentile of amateur radio." :-)

I would classify you as little more than an ego-driven salesman type
who does CB-like radio activity with a federal license grant.

Aren't you supposed to be in the national pool of "trained
communicators" for the nation's benefit and "advancing the state
of the art" of AMATEURISM?

I liked it better when you were just a Soma Come Loud student who
could get any human resources job he wanted after graduation.

No problem. We all find your attempts at judge, jury, and executioner
to be ineffectual, puerile, and rather stupid.

"False conclusion?"

Hardly. Had the no-code-test Technician never been created, US ham
radio would have been short by 200K ham licenses by the time of
"Reconstruction."

>> >>Sure. there is a lot of CW use by hams on HF, but there are precious

>prospective hams want to do?

Oh, my, now the judge, jury, and executioner pretends to have
prescience!

Tsk, tsk, tsk...all you can do is put down others who raise questions that might threaten your "superior" status in amateur radio.

Try READING what Alun said. He raises a valid point.

You are still REFUSING to accept anything contrary to your precious viewpoints.

That won't make them go away.

It just arouses enmity among all those who refuse to worship your radiogod status.
